[54379] GAM7809 precursor RNA folds onto itself, forming GAM7809 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[54380] Nucleotide sequence of GAM7809 precursor RNA, designated SEQ-ID: 180, and a schematic representation of a predicted secondary folding of GAM7809 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[54381] An enzyme complex designated DICER COMPLEX, `dices` the GAM7809 folded precursor RNA into GAM7809 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM7809 RNA is designated SEQ ID:398, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[54382] GAM7809 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM7809 target RNA, herein designated GAM TARGET RNA. GAM7809 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, design-

nated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[54383] GAM7809 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM7809 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM7809 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting. GAM7809 RNA may have a different number of target binding sites in untranslated regions of a GAM7809 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only. These target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[54384] The complementary binding of GAM7809 RNA, herein designated GAM RNA, to target binding sites on GAM7809 target RNA, herein designated GAM TARGET RNA, such as

BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM7809 target RNA into GAM7809 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[54385] It is appreciated that GAM7809 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM7809 target genes. The mRNA of each one of this plurality of GAM7809 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM7809 RNA, herein designated GAM RNA, and which when bound by GAM7809 RNA causes inhibition of translation of respective one or more GAM7809 target proteins.

[54386] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM7809 gene, herein designated GAM GENE, on one or more GAM7809 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other

recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[54387] It is appreciated that specific functions and accordingly utilities of GAM7809 correlate with, and may be deduced from, the identity of the target genes which GAM7809 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[54388]

[54389]

[54390] Apoptotic protease activating factor (APAF1, Accession NP_001151.1) is a GAM7809 target gene, herein designated TARGET GENE. APAF1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by APAF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APAF1 BINDING SITE, designated SEQ ID:11564, to the nucleotide se-

quence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54391] A function of GAM7809 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_001151.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[54392] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Apoptotic protease activating factor (APAF1, Accession NP_037361.1) is another GAM7809 target gene, herein designated TARGET GENE. APAF1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by APAF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APAF1 BINDING SITE, designated SEQ ID:11564, to the nucleotide sequence of GAM7809 RNA, herein designated

GAM RNA, also designated SEQ ID:398.

[54393] Another function of GAM7809 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_037361.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[54394] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.C10orf5 (Accession NP_848931.1) is another GAM7809 target gene, herein designated TARGET GENE. C10orf5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by C10orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C10orf5 BINDING SITE, designated SEQ ID:3002, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54395] Another function of GAM7809 is therefore inhibition of C10orf5 (Accession NP_848931.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C10orf5.

[54396] Chromosome 20 open reading frame 173 (C20orf173, Accession NP_543018.1) is another GAM7809 target gene, herein designated TARGET GENE. C20orf173 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf173, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf173 BINDING SITE, designated SEQ ID:8641, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54397] Another function of GAM7809 is therefore inhibition of Chromosome 20 open reading frame 173 (C20orf173, Accession NP_543018.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf173.

[54398] Chromosome 8 open reading frame 7 (C8orf7, Accession XP_088376.1) is another GAM7809 target gene, herein

designated TARGET GENE. C8orf7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C8orf7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C8orf7 BINDING SITE, designated SEQ ID:2030, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54399] Another function of GAM7809 is therefore inhibition of Chromosome 8 open reading frame 7 (C8orf7, Accession XP_088376.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf7.

[54400] Chemokine (c-c motif) ligand 1 (CCL1, Accession NP_002972.1) is another GAM7809 target gene, herein designated TARGET GENE. CCL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CCL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL1 BINDING SITE, designated SEQ ID:10810, to the nucleotide sequence of GAM7809

RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54401] Another function of GAM7809 is therefore inhibition of Chemokine (c-c motif) ligand 1 (CCL1, Accession NP_002972.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL1.

[54402] Cytochrome c oxidase subunit viia polypeptide 2 like (COX7A2L, Accession NP_004709.2) is another GAM7809 target gene, herein designated TARGET GENE. COX7A2L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by COX7A2L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COX7A2L BINDING SITE, designated SEQ ID:3657, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54403] Another function of GAM7809 is therefore inhibition of Cytochrome c oxidase subunit viia polypeptide 2 like (COX7A2L, Accession NP_004709.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

COX7A2L.

[54404] Catenin (cadherin-associated protein), delta 1 (CTNND1, Accession NP_001322.1) is another GAM7809 target gene, herein designated TARGET GENE. CTNND1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CTNND1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTNND1 BINDING SITE, designated SEQ ID:15144, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54405] Another function of GAM7809 is therefore inhibition of Catenin (cadherin-associated protein), delta 1 (CTNND1, Accession NP_001322.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTNND1.

[54406] Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, s. cerevisiae) (DDX11, Accession NP_085913.1) is another GAM7809 target gene, herein designated TARGET GENE. DDX11 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DDX11, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX11 BINDING SITE, designated SEQ ID:7637, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54407] Another function of GAM7809 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, *s. cerevisiae*) (DDX11, Accession NP_085913.1), a gene which could be an ATP-dependent DNA-binding helicase and may intervene in cell cycle regulation. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX11.

[54408] The function of DDX11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Dead/h (asp-glu-ala-asp/his) box polypeptide 39 (DDX39, Accession NP_620551.1) is another GAM7809 target gene, herein designated TARGET GENE. DDX39 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DDX39, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX39 BINDING SITE, designated SEQ ID:8028, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54409] Another function of GAM7809 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 39 (DDX39, Accession NP_620551.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX39.

[54410] Diacylglycerol o-acyltransferase homolog 1 (mouse) (DGAT1, Accession NP_036211.1) is another GAM7809 target gene, herein designated TARGET GENE. DGAT1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DGAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGAT1 BINDING SITE, designated SEQ ID:9487, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54411] Another function of GAM7809 is therefore inhibition of

Diacylglycerol o-acyltransferase homolog 1 (mouse) (DGAT1, Accession NP_036211.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DGAT1.

[54412] Deiodinase, iodothyronine, type ii (DIO2, Accession NP_000784.2) is another GAM7809 target gene, herein designated TARGET GENE. DIO2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DIO2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIO2 BINDING SITE, designated SEQ ID:17701, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54413] Another function of GAM7809 is therefore inhibition of Deiodinase, iodothyronine, type ii (DIO2, Accession NP_000784.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIO2.

[54414] Deiodinase, iodothyronine, type ii (DIO2, Accession NP_054644.1) is another GAM7809 target gene, herein designated TARGET GENE. DIO2 BINDING SITE is a target

binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DIO2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIO2 BINDING SITE, designated SEQ ID:17701, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54415] Another function of GAM7809 is therefore inhibition of Deiodinase, iodothyronine, type ii (DIO2, Accession NP_054644.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIO2.

[54416] DKFZp434C0328 (Accession NP_060047.1) is another GAM7809 target gene, herein designated TARGET GENE. DKFZp434C0328 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZp434C0328, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434C0328 BINDING SITE, designated SEQ ID:11265, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also design-

nated SEQ ID:398.

[54417] Another function of GAM7809 is therefore inhibition of DKFZp434C0328 (Accession NP_060047.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434C0328.

[54418] DKFZP434L1717 (Accession NP_115512.2) is another GAM7809 target gene, herein designated TARGET GENE. DKFZP434L1717 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434L1717, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434L1717 BINDING SITE, designated SEQ ID:9242, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54419] Another function of GAM7809 is therefore inhibition of DKFZP434L1717 (Accession NP_115512.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434L1717.

[54420] DKFZP564O1863 (Accession NP_056448.1) is another

GAM7809 target gene, herein designated TARGET GENE. DKFZP564O1863 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP564O1863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564O1863 BINDING SITE, designated SEQ ID:4432, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54421] Another function of GAM7809 is therefore inhibition of DKFZP564O1863 (Accession NP_056448.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564O1863.

[54422] DKFZp761D112 (Accession NP_115673.1) is another GAM7809 target gene, herein designated TARGET GENE. DKFZp761D112 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761D112, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761D112 BINDING SITE,

designated SEQ ID:7056, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54423] Another function of GAM7809 is therefore inhibition of DKFZp761D112 (Accession NP_115673.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761D112.

[54424] DKFZp761P1121 (Accession NP_690870.1) is another GAM7809 target gene, herein designated TARGET GENE. DKFZp761P1121 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761P1121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761P1121 BINDING SITE, designated SEQ ID:15876, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54425] Another function of GAM7809 is therefore inhibition of DKFZp761P1121 (Accession NP_690870.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp761P1121.

[54426] Dual specificity phosphatase 16 (DUSP16, Accession XP_039106.1) is another GAM7809 target gene, herein designated TARGET GENE. DUSP16 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DUSP16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP16 BINDING SITE, designated SEQ ID:12004, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54427] Another function of GAM7809 is therefore inhibition of Dual specificity phosphatase 16 (DUSP16, Accession XP_039106.1). Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP16.

[54428] Endothelial differentiation, sphingolipid g-protein-coupled receptor, 3 (EDG3, Accession NP_005217.1) is another GAM7809 target gene, herein designated TARGET GENE. EDG3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by EDG3, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDG3 BINDING SITE, designated SEQ ID:16612, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54429] Another function of GAM7809 is therefore inhibition of Endothelial differentiation, sphingolipid g-protein-coupled receptor, 3 (EDG3, Accession NP_005217.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDG3.

[54430] FLJ12363 (Accession NP_115543.1) is another GAM7809 target gene, herein designated TARGET GENE. FLJ12363 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12363, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12363 BINDING SITE, designated SEQ ID:766, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54431] Another function of GAM7809 is therefore inhibition of FLJ12363 (Accession NP_115543.1) . Accordingly, utilities

of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12363.

[54432] FLJ22833 (Accession NP_073748.1) is another GAM7809 target gene, herein designated TARGET GENE. FLJ22833 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ22833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22833 BINDING SITE, designated SEQ ID:4756, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54433] Another function of GAM7809 is therefore inhibition of FLJ22833 (Accession NP_073748.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22833.

[54434] Forkhead box p1 (FOXP1, Accession NP_116071.2) is another GAM7809 target gene, herein designated TARGET GENE. FOXP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FOXP1, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXP1 BINDING SITE, designated SEQ ID:4211, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54435] Another function of GAM7809 is therefore inhibition of Forkhead box p1 (FOXP1, Accession NP_116071.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXP1.

[54436] HGNT-IV-H (Accession NP_037376.1) is another GAM7809 target gene, herein designated TARGET GENE. HGNT-IV-H BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HGNT-IV-H, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HGNT-IV-H BINDING SITE, designated SEQ ID:8444, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54437] Another function of GAM7809 is therefore inhibition of HGNT-IV-H (Accession NP_037376.1) . Accordingly, utili-

ties of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HGNT-IV-H.

[54438] Histamine n-methyltransferase (HNMT, Accession NP_008826.1) is another GAM7809 target gene, herein designated TARGET GENE. HNMT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HNMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HNMT BINDING SITE, designated SEQ ID:558, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54439] Another function of GAM7809 is therefore inhibition of Histamine n-methyltransferase (HNMT, Accession NP_008826.1), a gene which inactivates histamine by n-methylation and therefore may be associated with Caucasian asthmatic. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of Caucasian asthmatic, and of other diseases and clinical conditions associated with HNMT.

[54440] The function of HNMT and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM1926.2.HSMPP8 (Accession XP_167894.1) is another GAM7809 target gene, herein designated TARGET GENE. HSMPP8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSMPP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSMPP8 BINDING SITE, designated SEQ ID:14992, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54441] Another function of GAM7809 is therefore inhibition of HSMPP8 (Accession XP_167894.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSMPP8.

[54442] Integrin, beta 2 (antigen cd18 (p95), lymphocyte function-associated antigen 1; macrophage antigen 1 (mac-1) beta subunit) (ITGB2, Accession NP_000202.1) is another GAM7809 target gene, herein designated TARGET GENE. ITGB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ITGB2, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGB2 BINDING SITE, designated SEQ ID:2700, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54443] Another function of GAM7809 is therefore inhibition of Integrin, beta 2 (antigen cd18 (p95), lymphocyte function-associated antigen 1; macrophage antigen 1 (mac-1) beta subunit) (ITGB2, Accession NP_000202.1), a gene which is involved in cell-cell and cell-matrix interactions. and therefore is associated with Leukocyte adhesion deficiency. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of Leukocyte adhesion deficiency, and of other diseases and clinical conditions associated with ITGB2.

[54444] The function of ITGB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM842.2.KIAA0471 (Accession NP_055672.1) is another GAM7809 target gene, herein designated TARGET GENE. KIAA0471 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

KIAA0471, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0471 BINDING SITE, designated SEQ ID:9743, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54445] Another function of GAM7809 is therefore inhibition of KIAA0471 (Accession NP_055672.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0471.

[54446] KIAA0746 (Accession XP_045277.3) is another GAM7809 target gene, herein designated TARGET GENE. KIAA0746 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0746, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0746 BINDING SITE, designated SEQ ID:6982, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54447] Another function of GAM7809 is therefore inhibition of

KIAA0746 (Accession XP_045277.3) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0746.

[54448] KIAA1018 (Accession NP_055782.1) is another GAM7809 target gene, herein designated TARGET GENE. KIAA1018 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1018, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1018 BINDING SITE, designated SEQ ID:12780, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54449] Another function of GAM7809 is therefore inhibition of KIAA1018 (Accession NP_055782.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1018.

[54450] KIAA1671 (Accession XP_037809.1) is another GAM7809 target gene, herein designated TARGET GENE. KIAA1671 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1671, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1671 BINDING SITE, designated SEQ ID:7267, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54451] Another function of GAM7809 is therefore inhibition of KIAA1671 (Accession XP_037809.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1671.

[54452] KIAA1726 (Accession XP_040860.3) is another GAM7809 target gene, herein designated TARGET GENE. KIAA1726 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1726, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1726 BINDING SITE, designated SEQ ID:9351, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54453] Another function of GAM7809 is therefore inhibition of KIAA1726 (Accession XP_040860.3) . Accordingly, utilities

of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1726.

[54454] LOC121838 (Accession XP_071772.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC121838 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC121838, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121838 BINDING SITE, designated SEQ ID:17414, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54455] Another function of GAM7809 is therefore inhibition of LOC121838 (Accession XP_071772.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121838.

[54456] LOC130536 (Accession XP_065771.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC130536 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC130536, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130536 BINDING SITE, designated SEQ ID:15342, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54457] Another function of GAM7809 is therefore inhibition of LOC130536 (Accession XP_065771.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130536.

[54458] LOC148709 (Accession XP_086281.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC148709 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC148709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148709 BINDING SITE, designated SEQ ID:19661, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54459] Another function of GAM7809 is therefore inhibition of LOC148709 (Accession XP_086281.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148709.

[54460] LOC149600 (Accession XP_097686.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC149600 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149600, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149600 BINDING SITE, designated SEQ ID:15051, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54461] Another function of GAM7809 is therefore inhibition of LOC149600 (Accession XP_097686.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149600.

[54462] LOC151057 (Accession XP_097998.1) is another GAM7809 target gene, herein designated TARGET GENE.

LOC151057 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC151057, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151057 BINDING SITE, designated SEQ ID:6610, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54463] Another function of GAM7809 is therefore inhibition of LOC151057 (Accession XP_097998.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151057.

[54464] LOC152200 (Accession XP_098174.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC152200 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC152200, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152200 BINDING SITE, designated SEQ ID:19176, to the nucleotide sequence of

GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54465] Another function of GAM7809 is therefore inhibition of LOC152200 (Accession XP_098174.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152200.

[54466] LOC157503 (Accession XP_098767.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC157503 BINDING SITE1 and LOC157503 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC157503, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157503 BINDING SITE1 and LOC157503 BINDING SITE2, designated SEQ ID:10657 and SEQ ID:20114 respectively, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54467] Another function of GAM7809 is therefore inhibition of LOC157503 (Accession XP_098767.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC157503.

[54468] LOC157567 (Accession XP_088328.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC157567 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC157567, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157567 BINDING SITE, designated SEQ ID:1783, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54469] Another function of GAM7809 is therefore inhibition of LOC157567 (Accession XP_088328.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157567.

[54470] LOC283007 (Accession XP_210849.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC283007 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283007, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283007 BINDING SITE, designated SEQ ID:14565, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54471] Another function of GAM7809 is therefore inhibition of LOC283007 (Accession XP_210849.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283007.

[54472] LOC283641 (Accession XP_208764.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC283641 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283641, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283641 BINDING SITE, designated SEQ ID:9650, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54473] Another function of GAM7809 is therefore inhibition of LOC283641 (Accession XP_208764.1) . Accordingly, utili-

ties of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283641.

[54474] LOC284019 (Accession XP_211302.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC284019 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284019 BINDING SITE, designated SEQ ID:16558, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54475] Another function of GAM7809 is therefore inhibition of LOC284019 (Accession XP_211302.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284019.

[54476] LOC284394 (Accession XP_210786.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC284394 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC284394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284394 BINDING SITE, designated SEQ ID:9920, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54477] Another function of GAM7809 is therefore inhibition of LOC284394 (Accession XP_210786.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284394.

[54478] LOC285219 (Accession XP_209518.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC285219 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285219 BINDING SITE, designated SEQ ID:5963, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54479] Another function of GAM7809 is therefore inhibition of LOC285219 (Accession XP_209518.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285219.

[54480] LOC285483 (Accession XP_209631.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC285483 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285483, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285483 BINDING SITE, designated SEQ ID:6690, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54481] Another function of GAM7809 is therefore inhibition of LOC285483 (Accession XP_209631.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285483.

[54482] LOC286039 (Accession XP_209873.1) is another GAM7809 target gene, herein designated TARGET GENE.

LOC286039 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286039 BINDING SITE, designated SEQ ID:2701, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54483] Another function of GAM7809 is therefore inhibition of LOC286039 (Accession XP_209873.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286039.

[54484] LOC286163 (Accession XP_209922.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC286163 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286163, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286163 BINDING SITE, designated SEQ ID:16153, to the nucleotide sequence of

GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54485] Another function of GAM7809 is therefore inhibition of LOC286163 (Accession XP_209922.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286163.

[54486] LOC286425 (Accession XP_208420.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC286425 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286425, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286425 BINDING SITE, designated SEQ ID:13979, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54487] Another function of GAM7809 is therefore inhibition of LOC286425 (Accession XP_208420.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286425.

[54488] LOC338558 (Accession XP_290465.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC338558 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC338558, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338558 BINDING SITE, designated SEQ ID:15746, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54489] Another function of GAM7809 is therefore inhibition of LOC338558 (Accession XP_290465.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338558.

[54490] LOC340184 (Accession XP_295183.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC340184 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC340184 BINDING SITE, designated SEQ ID:8010, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54491] Another function of GAM7809 is therefore inhibition of LOC340184 (Accession XP_295183.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340184.

[54492] LOC340408 (Accession XP_291274.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC340408 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340408 BINDING SITE, designated SEQ ID:2701, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54493] Another function of GAM7809 is therefore inhibition of LOC340408 (Accession XP_291274.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC340408.

[54494] LOC340852 (Accession XP_291740.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC340852 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340852, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340852 BINDING SITE, designated SEQ ID:19394, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54495] Another function of GAM7809 is therefore inhibition of LOC340852 (Accession XP_291740.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340852.

[54496] LOC345119 (Accession XP_298539.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC345119 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC345119, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345119 BINDING SITE, designated SEQ ID:5096, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54497] Another function of GAM7809 is therefore inhibition of LOC345119 (Accession XP_298539.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345119.

[54498] LOC346653 (Accession XP_294357.2) is another GAM7809 target gene, herein designated TARGET GENE. LOC346653 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC346653, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346653 BINDING SITE, designated SEQ ID:18192, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54499] Another function of GAM7809 is therefore inhibition of

LOC346653 (Accession XP_294357.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346653.

[54500] LOC349289 (Accession XP_300477.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC349289 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349289 BINDING SITE, designated SEQ ID:9015, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54501] Another function of GAM7809 is therefore inhibition of LOC349289 (Accession XP_300477.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349289.

[54502] LOC56906 (Accession NP_064532.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC56906 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by LOC56906, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC56906 BINDING SITE, designated SEQ ID:16105, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54503] Another function of GAM7809 is therefore inhibition of LOC56906 (Accession NP_064532.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC56906.

[54504] LOC92912 (Accession NP_775740.1) is another GAM7809 target gene, herein designated TARGET GENE. LOC92912 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92912, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92912 BINDING SITE, designated SEQ ID:11212, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54505] Another function of GAM7809 is therefore inhibition of

LOC92912 (Accession NP_775740.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92912.

[54506] MEGF11 (Accession NP_115821.1) is another GAM7809 target gene, herein designated TARGET GENE. MEGF11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MEGF11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEGF11 BINDING SITE, designated SEQ ID:9381, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54507] Another function of GAM7809 is therefore inhibition of MEGF11 (Accession NP_115821.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEGF11.

[54508] MGC14407 (Accession NP_116297.1) is another GAM7809 target gene, herein designated TARGET GENE. MGC14407 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14407, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14407 BINDING SITE, designated SEQ ID:10181, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54509] Another function of GAM7809 is therefore inhibition of MGC14407 (Accession NP_116297.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14407.

[54510] MGC19556 (Accession NP_291029.1) is another GAM7809 target gene, herein designated TARGET GENE. MGC19556 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC19556, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC19556 BINDING SITE, designated SEQ ID:4710, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54511] Another function of GAM7809 is therefore inhibition of MGC19556 (Accession NP_291029.1) . Accordingly, utili-

ties of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC19556.

[54512] MGC26647 (Accession NP_689919.1) is another GAM7809 target gene, herein designated TARGET GENE. MGC26647 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC26647, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC26647 BINDING SITE, designated SEQ ID:11055, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54513] Another function of GAM7809 is therefore inhibition of MGC26647 (Accession NP_689919.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC26647.

[54514] MGC39616 (Accession NP_775847.1) is another GAM7809 target gene, herein designated TARGET GENE. MGC39616 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC39616, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39616 BINDING SITE, designated SEQ ID:4954, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54515] Another function of GAM7809 is therefore inhibition of MGC39616 (Accession NP_775847.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC39616.

[54516] MGC4737 (Accession NP_113654.1) is another GAM7809 target gene, herein designated TARGET GENE. MGC4737 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC4737, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4737 BINDING SITE, designated SEQ ID:13111, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54517] Another function of GAM7809 is therefore inhibition of MGC4737 (Accession NP_113654.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MGC4737.

[54518] Mhc class ii transactivator (MHC2TA, Accession NP_000237.1) is another GAM7809 target gene, herein designated TARGET GENE. MHC2TA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MHC2TA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MHC2TA BINDING SITE, designated SEQ ID:16477, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54519] Another function of GAM7809 is therefore inhibition of Mhc class ii transactivator (MHC2TA, Accession NP_000237.1). Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MHC2TA.

[54520] Mki67 (fha domain) interacting nucleolar phosphoprotein (MKI67IP, Accession NP_115766.2) is another GAM7809 target gene, herein designated TARGET GENE. MKI67IP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MKI67IP, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MKI67IP BINDING SITE, designated SEQ ID:14713, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54521] Another function of GAM7809 is therefore inhibition of Mki67 (fha domain) interacting nucleolar phosphoprotein (MKI67IP, Accession NP_115766.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MKI67IP.

[54522] Membrane-spanning 4-domains, subfamily a, member 6a (MS4A6A, Accession NP_071744.2) is another GAM7809 target gene, herein designated TARGET GENE. MS4A6A BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MS4A6A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MS4A6A BINDING SITE, designated SEQ ID:9874, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ

ID:398.

[54523] Another function of GAM7809 is therefore inhibition of Membrane-spanning 4-domains, subfamily a, member 6a (MS4A6A, Accession NP_071744.2), a gene which binds to the fc region of immunoglobulins epsilon. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MS4A6A.

[54524] The function of MS4A6A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM180.1.NET-2 (Accession NP_036470.1) is another GAM7809 target gene, herein designated TARGET GENE. NET-2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NET-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NET-2 BINDING SITE, designated SEQ ID:14668, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54525] Another function of GAM7809 is therefore inhibition of NET-2 (Accession NP_036470.1) . Accordingly, utilities of

GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NET-2.

[54526] Nuclear factor i/b (NFIB, Accession NP_005587.1) is another GAM7809 target gene, herein designated TARGET GENE. NFIB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NFIB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NFIB BINDING SITE, designated SEQ ID:1182, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54527] Another function of GAM7809 is therefore inhibition of Nuclear factor i/b (NFIB, Accession NP_005587.1), a gene which recognizes and binds the palindromic sequence 5'-ttggcnnnnngccaa- 3' present in viral and cellular promoters. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFIB.

[54528] The function of NFIB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1. Neurotrophic tyrosine kinase, receptor, type 2

(NTRK2, Accession NP_006171.2) is another GAM7809 target gene, herein designated TARGET GENE. NTRK2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by NTRK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NTRK2 BINDING SITE, designated SEQ ID:9600, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54529] Another function of GAM7809 is therefore inhibition of Neurotrophic tyrosine kinase, receptor, type 2 (NTRK2, Accession NP_006171.2), a gene which is involved in the development and/or maintenance of the nervous system. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NTRK2.

[54530] The function of NTRK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM120.1.NY-REN-25 (Accession XP_027116.6) is another GAM7809 target gene, herein designated TARGET GENE. NY-REN-25 BINDING SITE is a target binding site

found in the 3' untranslated region of mRNA encoded by NY-REN-25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NY-REN-25 BINDING SITE, designated SEQ ID:14494, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54531] Another function of GAM7809 is therefore inhibition of NY-REN-25 (Accession XP_027116.6) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NY-REN-25.

[54532] NYD-SP11 (Accession NP_114157.2) is another GAM7809 target gene, herein designated TARGET GENE. NYD-SP11 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by NYD-SP11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NYD-SP11 BINDING SITE, designated SEQ ID:19585, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54533] Another function of GAM7809 is therefore inhibition of NYD-SP11 (Accession NP_114157.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NYD-SP11.

[54534] OTO3 (Accession XP_292588.2) is another GAM7809 target gene, herein designated TARGET GENE. OTO3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by OTO3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTO3 BINDING SITE, designated SEQ ID:17220, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54535] Another function of GAM7809 is therefore inhibition of OTO3 (Accession XP_292588.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTO3.

[54536] Piccolo (presynaptic cytomatrix protein) (PCLO, Accession XP_168530.1) is another GAM7809 target gene, herein designated TARGET GENE. PCLO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by PCLO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCLO BINDING SITE, designated SEQ ID:17329, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54537] Another function of GAM7809 is therefore inhibition of Piccolo (presynaptic cytomatrix protein) (PCLO, Accession XP_168530.1), a gene which involves in the cycling of synaptic vesicles. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCLO.

[54538] The function of PCLO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM133.2. Platelet-derived growth factor receptor, beta polypeptide (PDGFRB, Accession NP_002600.1) is another GAM7809 target gene, herein designated TARGET GENE. PDGFRB BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PDGFRB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

illustrates the complementarity of the nucleotide sequences of PDGFRB BINDING SITE, designated SEQ ID:8445, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54539] Another function of GAM7809 is therefore inhibition of Platelet-derived growth factor receptor, beta polypeptide (PDGFRB, Accession NP_002600.1), a gene which Platelet-derived growth factor receptor beta chain; tyrosine kinase receptor. and therefore may be associated with Chronic myeloproliferative diseases. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of Chronic myeloproliferative diseases, and of other diseases and clinical conditions associated with PDGFRB.

[54540] The function of PDGFRB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM579.1.PDZK3 (Accession NP_835260.1) is another GAM7809 target gene, herein designated TARGET GENE. PDZK3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PDZK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of PDZK3 BINDING SITE, designated SEQ ID:13968, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54541] Another function of GAM7809 is therefore inhibition of PDZK3 (Accession NP_835260.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZK3.

[54542] PDZK3 (Accession NP_055837.2) is another GAM7809 target gene, herein designated TARGET GENE. PDZK3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PDZK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDZK3 BINDING SITE, designated SEQ ID:13968, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54543] Another function of GAM7809 is therefore inhibition of PDZK3 (Accession NP_055837.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZK3.

[54544] Phytanoyl-coa hydroxylase interacting protein (PHYHIP, Accession NP_055574.1) is another GAM7809 target gene, herein designated TARGET GENE. PHYHIP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PHYHIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHYHIP BINDING SITE, designated SEQ ID:4208, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54545] Another function of GAM7809 is therefore inhibition of Phytanoyl-coa hydroxylase interacting protein (PHYHIP, Accession NP_055574.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHYHIP.

[54546] PRO0365 (Accession NP_054845.1) is another GAM7809 target gene, herein designated TARGET GENE. PRO0365 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRO0365, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

PRO0365 BINDING SITE, designated SEQ ID:15355, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54547] Another function of GAM7809 is therefore inhibition of PRO0365 (Accession NP_054845.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0365.

[54548] Prp4 pre-mrna processing factor 4 homolog b (yeast) (PRPF4B, Accession NP_003904.2) is another GAM7809 target gene, herein designated TARGET GENE. PRPF4B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PRPF4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRPF4B BINDING SITE, designated SEQ ID:11905, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54549] Another function of GAM7809 is therefore inhibition of Prp4 pre-mrna processing factor 4 homolog b (yeast) (PRPF4B, Accession NP_003904.2) . Accordingly, utilities

of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRPF4B.

[54550] Protein tyrosine phosphatase, receptor type, h (PTPRH, Accession NP_002833.1) is another GAM7809 target gene, herein designated TARGET GENE. PTPRH BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTPRH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRH BINDING SITE, designated SEQ ID:14651, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54551] Another function of GAM7809 is therefore inhibition of Protein tyrosine phosphatase, receptor type, h (PTPRH, Accession NP_002833.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRH.

[54552] Ran binding protein 17 (RANBP17, Accession NP_075048.1) is another GAM7809 target gene, herein designated TARGET GENE. RANBP17 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RANBP17, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RANBP17 BINDING SITE, designated SEQ ID:18307, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54553] Another function of GAM7809 is therefore inhibition of Ran binding protein 17 (RANBP17, Accession NP_075048.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RANBP17.

[54554] Reversion-inducing-cysteine-rich protein with kazal motifs (RECK, Accession NP_066934.1) is another GAM7809 target gene, herein designated TARGET GENE. RECK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RECK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RECK BINDING SITE, designated SEQ ID:6244, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54555] Another function of GAM7809 is therefore inhibition of

Reversion-inducing-cysteine-rich protein with kazal motifs (RECK, Accession NP_066934.1), a gene which plays a role in regulation of cancer progression and tumor angiogenesis. and therefore may be associated with Cancerous tumors. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of Cancerous tumors, and of other diseases and clinical conditions associated with RECK.

[54556] The function of RECK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM377.1. Serologically defined colon cancer antigen 33 (SDCCAG33, Accession NP_005777.2) is another GAM7809 target gene, herein designated TARGET GENE. SDCCAG33 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SDCCAG33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SDCCAG33 BINDING SITE, designated SEQ ID:6557, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54557] Another function of GAM7809 is therefore inhibition of Serologically defined colon cancer antigen 33 (SDCCAG33, Accession NP_005777.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SD-CCAG33.

[54558] Splicing factor, arginine/serine-rich 11 (SFRS11, Accession NP_004759.1) is another GAM7809 target gene, herein designated TARGET GENE. SFRS11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SFRS11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SFRS11 BINDING SITE, designated SEQ ID:14777, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54559] Another function of GAM7809 is therefore inhibition of Splicing factor, arginine/serine-rich 11 (SFRS11, Accession NP_004759.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFRS11.

[54560] Sry (sex determining region y)-box 5 (SOX5, Accession

NP_694534.1) is another GAM7809 target gene, herein designated TARGET GENE. SOX5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SOX5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SOX5 BINDING SITE, designated SEQ ID:9808, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54561] Another function of GAM7809 is therefore inhibition of Sry (sex determining region y)-box 5 (SOX5, Accession NP_694534.1), a gene which binds specifically to the dna sequence 5'- aacaat- 3'. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SOX5.

[54562] The function of SOX5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM488.1.Sry (sex determining region y)-box 5 (SOX5, Accession NP_008871.3) is another GAM7809 target gene, herein designated TARGET GENE. SOX5 BINDING SITE is a target binding site found in the 3' untranslated region of

multiple transcripts of mRNA encoded by SOX5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SOX5 BINDING SITE, designated SEQ ID:9808, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54563] Another function of GAM7809 is therefore inhibition of Sry (sex determining region y)-box 5 (SOX5, Accession NP_008871.3), a gene which binds specifically to the dna sequence 5'- aacaat- 3'. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SOX5.

[54564] The function of SOX5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM488.1.Sry (sex determining region y)-box 5 (SOX5, Accession NP_821078.1) is another GAM7809 target gene, herein designated TARGET GENE. SOX5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SOX5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of SOX5 BINDING SITE, designated SEQ ID:9808, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54565] Another function of GAM7809 is therefore inhibition of Sry (sex determining region y)-box 5 (SOX5, Accession NP_821078.1), a gene which binds specifically to the dna sequence 5'- aacaat- 3'. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SOX5.

[54566] The function of SOX5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM488.1.Sparc/osteonectin, cwcv and kazal-like domains proteoglycan (testican) (SPOCK, Accession NP_004589.1) is another GAM7809 target gene, herein designated TARGET GENE. SPOCK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SPOCK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPOCK BINDING SITE, designated SEQ ID:10241, to the nucleotide sequence of GAM7809

RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54567] Another function of GAM7809 is therefore inhibition of Sparc/osteonectin, cwcv and kazal-like domains proteoglycan (testican) (SPOCK, Accession NP_004589.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPOCK.

[54568] SRGAP2 (Accession NP_055665.1) is another GAM7809 target gene, herein designated TARGET GENE. SRGAP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SRGAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRGAP2 BINDING SITE, designated SEQ ID:14316, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54569] Another function of GAM7809 is therefore inhibition of SRGAP2 (Accession NP_055665.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRGAP2.

[54570] STAF65(gamma) (Accession NP_055675.1) is another GAM7809 target gene, herein designated TARGET GENE. STAF65(gamma) BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by STAF65(gamma), corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAF65(gamma) BINDING SITE, designated SEQ ID:1623, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54571] Another function of GAM7809 is therefore inhibition of STAF65(gamma) (Accession NP_055675.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAF65(gamma).

[54572] Start domain containing 4, sterol regulated (STARD4, Accession NP_631903.1) is another GAM7809 target gene, herein designated TARGET GENE. STARD4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by STARD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of STARD4 BINDING SITE, designated SEQ ID:7431, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54573] Another function of GAM7809 is therefore inhibition of Start domain containing 4, sterol regulated (STARD4, Accession NP_631903.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STARD4.

[54574] Taf1-like rna polymerase ii, tata box binding protein (tbp)-associated factor, 210kda (TAF1L, Accession NP_722516.1) is another GAM7809 target gene, herein designated TARGET GENE. TAF1L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TAF1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAF1L BINDING SITE, designated SEQ ID:10086, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54575] Another function of GAM7809 is therefore inhibition of Taf1-like rna polymerase ii, tata box binding protein

(tbp)-associated factor, 210kda (TAF1L, Accession NP_722516.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAF1L.

[54576] Transforming growth factor, beta-induced, 68kda (TGFB1, Accession NP_000349.1) is another GAM7809 target gene, herein designated TARGET GENE. TGFB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TGFB1 BINDING SITE, designated SEQ ID:14063, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54577] Another function of GAM7809 is therefore inhibition of Transforming growth factor, beta-induced, 68kda (TGFB1, Accession NP_000349.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TGFB1.

[54578] Ttk protein kinase (TTK, Accession NP_003309.2) is another GAM7809 target gene, herein designated TARGET GENE. TTK BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by TTK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTK BINDING SITE, designated SEQ ID:10374, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54579] Another function of GAM7809 is therefore inhibition of Ttk protein kinase (TTK, Accession NP_003309.2), a gene which phosphorylates proteins on serine, threonine, and tyrosine; and is probably associated with cell proliferation. Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTK.

[54580] The function of TTK has been established by previous studies. Using *Xenopus* egg extracts, Abrieu et al. (2001) isolated a homolog of yeast Mps1 and showed that it is a kinetochore-associated kinase whose activity is necessary to establish and maintain the mitotic checkpoint. Since high levels of Mad2 (OMIM Ref. No. 601467) overcame checkpoint loss in Mps1-depleted extracts, Mps1 acts upstream of Mad2-mediated inhibition of the anaphase-promoting complex/cyclosome (APC/C). The authors

stated that Mps1 is essential for the checkpoint because it is required for recruitment and retention of active CENPE (OMIM Ref. No. 117143) at kinetochores, which in turn is necessary for kinetochore association of Mad1 (OMIM Ref. No. 602686) and Mad2. Fisk and Winey (2001) demonstrated that the mouse Mps1 ortholog, Esk, regulates centrosome duplication. Endogenous Esk and overexpressed GFP-Esk localized to centrosomes and kinetochores in mouse cells. Overexpression of GFP-Esk caused reduplication of centrosomes during S-phase arrest. In contrast, a kinase-deficient mutant blocked centrosome duplication altogether. The authors found that control of centrosome duplication by Esk requires Cdk2 (OMIM Ref. No. 116953). Inhibition of Cdk2 prevented centrosome reduplication and destabilized Esk, causing its subsequent loss from centrosomes, suggesting that Cdk2 promotes the centrosome duplication function of Esk by regulating its stability during S phase. Thus, Esk, an in vitro Cdk2 substrate, regulates centrosome duplication jointly with Cdk2.

[54581]

[54582] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[54583] Abrieu, A.; Magnaghi- Jaulin, L.; Kahana, J. A.; Peter, M.; Castro, A.; Vigneron, S.; Lorca, T.; Cleveland, D. W.; Labbe, J.- C. : Mps1 is a kinetochore- associated kinase essential for the vertebrate mitotic checkpoint. Cell 106: 83- 93, 2001. ; and

[54584] Fisk, H. A.; Winey, M. : The mouse Mps1p- like kinase regulates centrosome duplication. Cell 106: 95- 104, 2001.

[54585] Further studies establishing the function and utilities of TTK are found in John Hopkins OMIM database record ID 604092, and in cited publications listed in Table 5, which are hereby incorporated by reference. Udp-n-acteylglucosamine pyrophosphorylase 1 (UAP1, Accession NP_003106.2) is another GAM7809 target gene, herein designated TARGET GENE. UAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UAP1 BINDING SITE, designated SEQ ID:14376, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54586] Another function of GAM7809 is therefore inhibition of Udp-n-acteylglucosamine pyrophosphorylase 1 (UAP1, Accession NP_003106.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UAP1.

[54587] Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683713.1) is another GAM7809 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3` un-translated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:9104, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54588] Another function of GAM7809 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683713.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WB-SCR21.

[54589] Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_112585.2) is another GAM7809 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:9104, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54590] Another function of GAM7809 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_112585.2) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR21.

[54591] WFDC13 (Accession NP_742002.1) is another GAM7809 target gene, herein designated TARGET GENE. WFDC13 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WFDC13, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WFDC13 BINDING SITE, designated SEQ ID:17697, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54592] Another function of GAM7809 is therefore inhibition of WFDC13 (Accession NP_742002.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WFDC13.

[54593] ZBTB1 (Accession NP_055765.1) is another GAM7809 target gene, herein designated TARGET GENE. ZBTB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZBTB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZBTB1 BINDING SITE, designated SEQ ID:19264, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54594] Another function of GAM7809 is therefore inhibition of ZBTB1 (Accession NP_055765.1) . Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with ZBTB1.

[54595] Zinc finger protein 228 (ZNF228, Accession NP_037512.1) is another GAM7809 target gene, herein designated TARGET GENE. ZNF228 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF228 BINDING SITE, designated SEQ ID:14011, to the nucleotide sequence of GAM7809 RNA, herein designated GAM RNA, also designated SEQ ID:398.

[54596] Another function of GAM7809 is therefore inhibition of Zinc finger protein 228 (ZNF228, Accession NP_037512.1). Accordingly, utilities of GAM7809 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF228.

[54597]

[54598] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 7933 (GAM7933), which modulates expression of respective target genes thereof, the function and utility of which tar-

get genes is known in the art.

[54599] GAM7933 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM7933 was detected is described hereinabove with reference to Figs. 8–15.

[54600] GAM7933 gene, herein designated GAM GENE, and GAM7933 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[54601] GAM7933 gene encodes a GAM7933 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM7933 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM7933 precursor RNA is designated SEQ ID:145, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:145 is located at position 3260217 relative to chromosome 7.

[54602] GAM7933 precursor RNA folds onto itself, forming GAM7933 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence

of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[54603] GAM7933 precursor RNA folds onto itself, forming GAM7933 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[54604] Nucleotide sequence of GAM7933 precursor RNA, designated SEQ-ID: 145, and a schematic representation of a predicted secondary folding of GAM7933 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[54605] An enzyme complex designated DICER COMPLEX, `dices` the GAM7933 folded precursor RNA into GAM7933 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex

comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM7933 RNA is designated SEQ ID:203, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[54606] GAM7933 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM7933 target RNA, herein designated GAM TARGET RNA. GAM7933 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5' untranslated region, a protein coding region and a 3' untranslated region, designated 5'UTR, PROTEIN CODING and 3'UTR respectively.

[54607] GAM7933 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM7933 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM7933 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated

that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting. GAM7933 RNA may have a different number of target binding sites in untranslated regions of a GAM7933 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3'UTR region, this is meant as an example only these target binding sites may be located in the 3'UTR region, the 5'UTR region, or in both 3'UTR and 5'UTR regions.

[54608] The complementary binding of GAM7933 RNA, herein designated GAM RNA, to target binding sites on GAM7933 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM7933 target RNA into GAM7933 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[54609] It is appreciated that GAM7933 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM7933 target genes. The mRNA of each one of this plurality of GAM7933 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM7933 RNA, herein designated GAM RNA, and which when bound by

GAM7933 RNA causes inhibition of translation of respective one or more GAM7933 target proteins.

[54610] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM7933 gene, herein designated GAM GENE, on one or more GAM7933 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[54611] It is appreciated that specific functions and accordingly utilities of GAM7933 correlate with, and may be deduced from, the identity of the target genes which GAM7933 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[54612]

[54613]

[54614] A disintegrin and metalloproteinase domain 10 (ADAM10, Accession NP_001101.1) is a GAM7933 target gene, herein designated TARGET GENE. ADAM10 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAM10 BINDING SITE, designated SEQ ID:17173, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54615] A function of GAM7933 is therefore inhibition of A disintegrin and metalloproteinase domain 10 (ADAM10, Accession NP_001101.1), a gene which Member of ADAM family of zinc metalloproteases. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAM10.

[54616] The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM47.1.A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 13 (ADAMTS13, Accession NP_620597.1) is another GAM7933 target gene, herein designated TARGET GENE. ADAMTS13 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ADAMTS13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAMTS13 BINDING SITE, designated SEQ ID:11726, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54617] Another function of GAM7933 is therefore inhibition of A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 13 (ADAMTS13, Accession NP_620597.1), a gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAMTS13.

[54618] The function of ADAMTS13 and its association with various diseases and clinical conditions, has been established

by previous studies, as described hereinabove with reference to GAM71.1.Rho guanine nucleotide exchange factor (gef) 12 (ARHGEF12, Accession NP_056128.1) is another GAM7933 target gene, herein designated TARGET GENE. ARHGEF12 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ARHGEF12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF12 BINDING SITE, designated SEQ ID:19923, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54619] Another function of GAM7933 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 12 (ARHGEF12, Accession NP_056128.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF12.

[54620] Bromodomain containing 2 (BRD2, Accession NP_005095.1) is another GAM7933 target gene, herein designated TARGET GENE. BRD2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA

encoded by BRD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRD2 BINDING SITE, designated SEQ ID:14556, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54621] Another function of GAM7933 is therefore inhibition of Bromodomain containing 2 (BRD2, Accession NP_005095.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRD2.

[54622] Chromosome 1 open reading frame 21 (C1orf21, Accession NP_110433.1) is another GAM7933 target gene, herein designated TARGET GENE. C1orf21 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C1orf21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf21 BINDING SITE, designated SEQ ID:12125, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54623] Another function of GAM7933 is therefore inhibition of Chromosome 1 open reading frame 21 (C1orf21, Accession NP_110433.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf21.

[54624] Chemokine (c-c motif) ligand 28 (CCL28, Accession NP_062820.1) is another GAM7933 target gene, herein designated TARGET GENE. CCL28 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCL28, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL28 BINDING SITE, designated SEQ ID:10807, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54625] Another function of GAM7933 is therefore inhibition of Chemokine (c-c motif) ligand 28 (CCL28, Accession NP_062820.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL28.

[54626] Centaurin, delta 1 (CENTD1, Accession NP_631921.1) is another GAM7933 target gene, herein designated TARGET

GENE. CENTD1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CENTD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENTD1 BINDING SITE, designated SEQ ID:9614, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54627] Another function of GAM7933 is therefore inhibition of Centaurin, delta 1 (CENTD1, Accession NP_631921.1), a gene which is involved in cell signaling/communication. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENTD1.

[54628] The function of CENTD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.Crebbp/ep300 inhibitory protein 1 (CRI1, Accession NP_055150.1) is another GAM7933 target gene, herein designated TARGET GENE. CRI1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRI1, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRI1 BINDING SITE, designated SEQ ID:16632, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54629] Another function of GAM7933 is therefore inhibition of Crebbp/ep300 inhibitory protein 1 (CRI1, Accession NP_055150.1), a gene which regulates cell cycle as well as tissue- specific transcription and differentiation. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRI1.

[54630] The function of CRI1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM229.1.DKFZp547J144 (Accession XP_091486.2) is another GAM7933 target gene, herein designated TARGET GENE. DKFZp547J144 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp547J144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DKFZp547J144 BINDING SITE, designated SEQ ID:4932, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54631] Another function of GAM7933 is therefore inhibition of DKFZp547J144 (Accession XP_091486.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547J144.

[54632] DKFZP761M1511 (Accession XP_295135.1) is another GAM7933 target gene, herein designated TARGET GENE. DKFZP761M1511 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP761M1511, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP761M1511 BINDING SITE, designated SEQ ID:16574, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54633] Another function of GAM7933 is therefore inhibition of DKFZP761M1511 (Accession XP_295135.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZP761M1511.

[54634] DKFZp762K222 (Accession XP_048721.1) is another GAM7933 target gene, herein designated TARGET GENE. DKFZp762K222 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp762K222, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762K222 BINDING SITE, designated SEQ ID:17576, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54635] Another function of GAM7933 is therefore inhibition of DKFZp762K222 (Accession XP_048721.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762K222.

[54636] Cyclin d binding myb-like transcription factor 1 (DMTF1, Accession NP_066968.1) is another GAM7933 target gene, herein designated TARGET GENE. DMTF1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DMTF1, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMTF1 BINDING SITE, designated SEQ ID:15923, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54637] Another function of GAM7933 is therefore inhibition of Cyclin d binding myb-like transcription factor 1 (DMTF1, Accession NP_066968.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMTF1.

[54638] Egf-like-domain, multiple 5 (EGFL5, Accession XP_098838.1) is another GAM7933 target gene, herein designated TARGET GENE. EGFL5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by EGFL5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGFL5 BINDING SITE, designated SEQ ID:10302, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54639] Another function of GAM7933 is therefore inhibition of

Egf-like-domain, multiple 5 (EGFL5, Accession XP_098838.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EGFL5.

[54640] Enamelin (ENAM, Accession NP_114095.1) is another GAM7933 target gene, herein designated TARGET GENE. ENAM BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ENAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ENAM BINDING SITE, designated SEQ ID:16108, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54641] Another function of GAM7933 is therefore inhibition of Enamelin (ENAM, Accession NP_114095.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENAM.

[54642] Erythrocyte membrane protein band 4.1 like 4b (EPB41L4B, Accession NP_060894.1) is another GAM7933 target gene, herein designated TARGET GENE. EPB41L4B BINDING SITE is a target binding site found in the 3' un-

translated region of multiple transcripts of mRNA encoded by EPB41L4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EPB41L4B BINDING SITE, designated SEQ ID:4101, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54643] Another function of GAM7933 is therefore inhibition of Erythrocyte membrane protein band 4.1 like 4b (EPB41L4B, Accession NP_060894.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EPB41L4B.

[54644] Enhancer of zeste homolog 1 (drosophila) (EZH1, Accession NP_001982.2) is another GAM7933 target gene, herein designated TARGET GENE. EZH1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EZH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EZH1 BINDING SITE, designated SEQ ID:4202, to the nucleotide sequence of

GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54645] Another function of GAM7933 is therefore inhibition of Enhancer of zeste homolog 1 (drosophila) (EZH1, Accession NP_001982.2), a gene which may act in transcriptional regulation and heterochromatin maintenance. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EZH1.

[54646] The function of EZH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1. Fatty-acid-coenzyme a ligase, long-chain 4 (FACL4, Accession NP_075266.1) is another GAM7933 target gene, herein designated TARGET GENE. FACL4 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FACL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FACL4 BINDING SITE, designated SEQ ID:7615, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ

ID:203.

[54647] Another function of GAM7933 is therefore inhibition of Fatty-acid-coenzyme a ligase, long-chain 4 (FACL4, Accession NP_075266.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FACL4.

[54648] Fatty-acid-coenzyme a ligase, long-chain 4 (FACL4, Accession NP_004449.1) is another GAM7933 target gene, herein designated TARGET GENE. FACL4 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FACL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FACL4 BINDING SITE, designated SEQ ID:7615, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54649] Another function of GAM7933 is therefore inhibition of Fatty-acid-coenzyme a ligase, long-chain 4 (FACL4, Accession NP_004449.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FACL4.

[54650] Fibroblast growth factor 2 (basic) (FGF2, Accession

NP_001997.3) is another GAM7933 target gene, herein designated TARGET GENE. FGF2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FGF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF2 BINDING SITE, designated SEQ ID:1793, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54651] Another function of GAM7933 is therefore inhibition of Fibroblast growth factor 2 (basic) (FGF2, Accession NP_001997.3), a gene which the Basic fibroblast growth factor 2; is mitogenic, angiogenic, and neurotrophic factor. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF2.

[54652] The function of FGF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM36.1.FLJ10520 (Accession NP_060594.2) is another GAM7933 target gene, herein designated TARGET GENE. FLJ10520 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by FLJ10520, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10520 BINDING SITE, designated SEQ ID:17571, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54653] Another function of GAM7933 is therefore inhibition of FLJ10520 (Accession NP_060594.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10520.

[54654] FLJ10702 (Accession NP_060654.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ10702 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10702, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10702 BINDING SITE, designated SEQ ID:17057, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54655] Another function of GAM7933 is therefore inhibition of FLJ10702 (Accession NP_060654.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10702.

[54656] FLJ10874 (Accession NP_060722.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ10874 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10874, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10874 BINDING SITE, designated SEQ ID:5958, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54657] Another function of GAM7933 is therefore inhibition of FLJ10874 (Accession NP_060722.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10874.

[54658] FLJ10891 (Accession NP_060730.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ10891 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ10891, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10891 BINDING SITE, designated SEQ ID:8768, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54659] Another function of GAM7933 is therefore inhibition of FLJ10891 (Accession NP_060730.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10891.

[54660] FLJ12747 (Accession XP_290972.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ12747 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12747 BINDING SITE, designated SEQ ID:13605, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54661] Another function of GAM7933 is therefore inhibition of

FLJ12747 (Accession XP_290972.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12747.

[54662] FLJ12888 (Accession NP_079221.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ12888 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ12888, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12888 BINDING SITE, designated SEQ ID:3021, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54663] Another function of GAM7933 is therefore inhibition of FLJ12888 (Accession NP_079221.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12888.

[54664] FLJ13057 (Accession NP_848526.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ13057 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13057, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13057 BINDING SITE, designated SEQ ID:18278, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54665] Another function of GAM7933 is therefore inhibition of FLJ13057 (Accession NP_848526.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13057.

[54666] FLJ13204 (Accession NP_079037.2) is another GAM7933 target gene, herein designated TARGET GENE. FLJ13204 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13204, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13204 BINDING SITE, designated SEQ ID:2848, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54667] Another function of GAM7933 is therefore inhibition of FLJ13204 (Accession NP_079037.2) . Accordingly, utilities

of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13204.

[54668] FLJ14675 (Accession NP_116212.3) is another GAM7933 target gene, herein designated TARGET GENE. FLJ14675 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14675, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14675 BINDING SITE, designated SEQ ID:14019, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54669] Another function of GAM7933 is therefore inhibition of FLJ14675 (Accession NP_116212.3) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14675.

[54670] FLJ20274 (Accession NP_060206.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ20274 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20274, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20274 BINDING SITE, designated SEQ ID:19345, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54671] Another function of GAM7933 is therefore inhibition of FLJ20274 (Accession NP_060206.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20274.

[54672] FLJ23056 (Accession NP_078858.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ23056 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23056, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23056 BINDING SITE, designated SEQ ID:17879, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54673] Another function of GAM7933 is therefore inhibition of FLJ23056 (Accession NP_078858.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ23056.

[54674] FLJ31978 (Accession NP_653270.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ31978 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31978, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31978 BINDING SITE, designated SEQ ID:1522, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54675] Another function of GAM7933 is therefore inhibition of FLJ31978 (Accession NP_653270.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31978.

[54676] FLJ32535 (Accession NP_689760.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ32535 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ32535, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ32535 BINDING SITE, designated SEQ ID:8740, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54677] Another function of GAM7933 is therefore inhibition of FLJ32535 (Accession NP_689760.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32535.

[54678] FLJ32685 (Accession NP_689747.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ32685 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ32685, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32685 BINDING SITE, designated SEQ ID:14845, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54679] Another function of GAM7933 is therefore inhibition of FLJ32685 (Accession NP_689747.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ32685.

[54680] FLJ39370 (Accession NP_689613.1) is another GAM7933 target gene, herein designated TARGET GENE. FLJ39370 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ39370, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39370 BINDING SITE, designated SEQ ID:8161, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54681] Another function of GAM7933 is therefore inhibition of FLJ39370 (Accession NP_689613.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39370.

[54682] Gamma-aminobutyric acid (gaba) a receptor, pi (GABRP, Accession NP_055026.1) is another GAM7933 target gene, herein designated TARGET GENE. GABRP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GABRP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of GABRP BINDING SITE, designated SEQ ID:9698, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54683] Another function of GAM7933 is therefore inhibition of Gamma-aminobutyric acid (gaba) a receptor, pi (GABRP, Accession NP_055026.1), a gene which mediates neuronal inhibition by binding to the gaba/benzodiazepine receptor and opening an integral chloride channel. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GABRP.

[54684] The function of GABRP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM295.1. Gdp dissociation inhibitor 2 (GDI2, Accession NP_001485.2) is another GAM7933 target gene, herein designated TARGET GENE. GDI2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GDI2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GDI2 BINDING SITE,

designated SEQ ID:3115, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54685] Another function of GAM7933 is therefore inhibition of Gdp dissociation inhibitor 2 (GDI2, Accession NP_001485.2), a gene which regulates the gdp/gtp exchange reaction of most rab proteins by inhibiting the dissociation of gdp from them, and the subsequent binding of gtp to them. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GDI2.

[54686] The function of GDI2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.GPIG4 (Accession NP_689758.1) is another GAM7933 target gene, herein designated TARGET GENE. GPIG4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GPIG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPIG4 BINDING SITE, designated SEQ ID:1050, to the nucleotide sequence of GAM7933 RNA, herein designated

GAM RNA, also designated SEQ ID:203.

[54687] Another function of GAM7933 is therefore inhibition of GPIG4 (Accession NP_689758.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPIG4.

[54688] Potassium large conductance calcium-activated channel, subfamily m, beta member 4 (KCNMB4, Accession NP_055320.4) is another GAM7933 target gene, herein designated TARGET GENE. KCNMB4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KCNMB4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNMB4 BINDING SITE, designated SEQ ID:7510, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54689] Another function of GAM7933 is therefore inhibition of Potassium large conductance calcium-activated channel, subfamily m, beta member 4 (KCNMB4, Accession NP_055320.4), a gene which regulates gating kinetics of slow K channels in a Ca- sensitive manner. Accordingly, utilities of GAM7933 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with KCNMB4.

[54690] The function of KCNMB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.KIAA0179 (Accession XP_035973.4) is another GAM7933 target gene, herein designated TARGET GENE. KIAA0179 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0179, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0179 BINDING SITE, designated SEQ ID:4948, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54691] Another function of GAM7933 is therefore inhibition of KIAA0179 (Accession XP_035973.4) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0179.

[54692] KIAA0218 (Accession NP_055575.1) is another GAM7933 target gene, herein designated TARGET GENE. KIAA0218

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0218 BINDING SITE, designated SEQ ID:8133, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54693] Another function of GAM7933 is therefore inhibition of KIAA0218 (Accession NP_055575.1). Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0218.

[54694] KIAA0247 (Accession NP_055549.1) is another GAM7933 target gene, herein designated TARGET GENE. KIAA0247 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0247, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0247 BINDING SITE, designated SEQ ID:13278, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54695] Another function of GAM7933 is therefore inhibition of KIAA0247 (Accession NP_055549.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0247.

[54696] KIAA0645 (Accession NP_055477.1) is another GAM7933 target gene, herein designated TARGET GENE. KIAA0645 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0645, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0645 BINDING SITE, designated SEQ ID:3596, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54697] Another function of GAM7933 is therefore inhibition of KIAA0645 (Accession NP_055477.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0645.

[54698] KIAA1164 (Accession XP_045358.2) is another GAM7933 target gene, herein designated TARGET GENE. KIAA1164 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA1164, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1164 BINDING SITE, designated SEQ ID:1382, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54699] Another function of GAM7933 is therefore inhibition of KIAA1164 (Accession XP_045358.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1164.

[54700] KIAA1305 (Accession NP_079357.1) is another GAM7933 target gene, herein designated TARGET GENE. KIAA1305 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1305, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1305 BINDING SITE, designated SEQ ID:19660, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54701] Another function of GAM7933 is therefore inhibition of

KIAA1305 (Accession NP_079357.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1305.

[54702] KIAA1726 (Accession XP_040860.3) is another GAM7933 target gene, herein designated TARGET GENE. KIAA1726 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1726, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1726 BINDING SITE, designated SEQ ID:13195, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54703] Another function of GAM7933 is therefore inhibition of KIAA1726 (Accession XP_040860.3) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1726.

[54704] Kinesin-associated protein 3 (KIFAP3, Accession NP_055785.2) is another GAM7933 target gene, herein designated TARGET GENE. KIFAP3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by KIFAP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIFAP3 BINDING SITE, designated SEQ ID:5824, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54705] Another function of GAM7933 is therefore inhibition of Kinesin-associated protein 3 (KIFAP3, Accession NP_055785.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIFAP3.

[54706] LOC113612 (Accession XP_054492.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC113612 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC113612, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC113612 BINDING SITE, designated SEQ ID:6871, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54707] Another function of GAM7933 is therefore inhibition of LOC113612 (Accession XP_054492.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113612.

[54708] LOC145652 (Accession XP_096827.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC145652 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145652, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145652 BINDING SITE, designated SEQ ID:12056, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54709] Another function of GAM7933 is therefore inhibition of LOC145652 (Accession XP_096827.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145652.

[54710] LOC153222 (Accession NP_705835.1) is another GAM7933 target gene, herein designated TARGET GENE.

LOC153222 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC153222, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153222 BINDING SITE, designated SEQ ID:7489, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54711] Another function of GAM7933 is therefore inhibition of LOC153222 (Accession NP_705835.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153222.

[54712] LOC153883 (Accession XP_087798.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC153883 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC153883, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153883 BINDING SITE, designated SEQ ID:18705, to the nucleotide sequence of

GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54713] Another function of GAM7933 is therefore inhibition of LOC153883 (Accession XP_087798.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153883.

[54714] LOC220926 (Accession XP_166128.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC220926 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC220926, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220926 BINDING SITE, designated SEQ ID:11165, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54715] Another function of GAM7933 is therefore inhibition of LOC220926 (Accession XP_166128.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220926.

[54716] LOC221035 (Accession XP_167640.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC221035 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC221035, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221035 BINDING SITE, designated SEQ ID:17864, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54717] Another function of GAM7933 is therefore inhibition of LOC221035 (Accession XP_167640.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221035.

[54718] LOC222674 (Accession XP_167095.3) is another GAM7933 target gene, herein designated TARGET GENE. LOC222674 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC222674, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC222674 BINDING SITE, designated SEQ ID:4311, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54719] Another function of GAM7933 is therefore inhibition of LOC222674 (Accession XP_167095.3) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222674.

[54720] LOC255328 (Accession XP_172920.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC255328 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC255328, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255328 BINDING SITE, designated SEQ ID:10238, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54721] Another function of GAM7933 is therefore inhibition of LOC255328 (Accession XP_172920.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC255328.

[54722] LOC256598 (Accession XP_172816.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC256598 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC256598, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256598 BINDING SITE, designated SEQ ID:8974, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54723] Another function of GAM7933 is therefore inhibition of LOC256598 (Accession XP_172816.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256598.

[54724] LOC257122 (Accession XP_171239.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC257122 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC257122, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC257122 BINDING SITE, designated SEQ ID:12899, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54725] Another function of GAM7933 is therefore inhibition of LOC257122 (Accession XP_171239.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257122.

[54726] LOC257408 (Accession XP_171176.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC257408 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC257408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC257408 BINDING SITE, designated SEQ ID:12573, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54727] Another function of GAM7933 is therefore inhibition of

LOC257408 (Accession XP_171176.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC257408.

[54728] LOC282959 (Accession XP_212622.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC282959 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282959, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282959 BINDING SITE, designated SEQ ID:4311, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54729] Another function of GAM7933 is therefore inhibition of LOC282959 (Accession XP_212622.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282959.

[54730] LOC283213 (Accession XP_208566.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC283213 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC283213, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283213 BINDING SITE, designated SEQ ID:13264, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54731] Another function of GAM7933 is therefore inhibition of LOC283213 (Accession XP_208566.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283213.

[54732] LOC283423 (Accession XP_211031.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC283423 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283423 BINDING SITE, designated SEQ ID:492, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also design-

nated SEQ ID:203.

[54733] Another function of GAM7933 is therefore inhibition of LOC283423 (Accession XP_211031.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283423.

[54734] LOC283715 (Accession XP_208800.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC283715 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283715, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283715 BINDING SITE, designated SEQ ID:4062, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54735] Another function of GAM7933 is therefore inhibition of LOC283715 (Accession XP_208800.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283715.

[54736] LOC283731 (Accession XP_211184.1) is another

GAM7933 target gene, herein designated TARGET GENE. LOC283731 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283731 BINDING SITE, designated SEQ ID:16313, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54737] Another function of GAM7933 is therefore inhibition of LOC283731 (Accession XP_211184.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283731.

[54738] LOC283820 (Accession NP_775885.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC283820 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283820, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283820 BINDING SITE, design-

nated SEQ ID:6496, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54739] Another function of GAM7933 is therefore inhibition of LOC283820 (Accession NP_775885.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283820.

[54740] LOC284647 (Accession XP_211569.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC284647 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284647, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284647 BINDING SITE, designated SEQ ID:15385, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54741] Another function of GAM7933 is therefore inhibition of LOC284647 (Accession XP_211569.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284647.

[54742] LOC285283 (Accession XP_208017.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC285283 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285283, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285283 BINDING SITE, designated SEQ ID:8711, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54743] Another function of GAM7933 is therefore inhibition of LOC285283 (Accession XP_208017.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285283.

[54744] LOC285334 (Accession XP_211844.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC285334 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285334 BINDING SITE, designated SEQ ID:19928, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54745] Another function of GAM7933 is therefore inhibition of LOC285334 (Accession XP_211844.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285334.

[54746] LOC285769 (Accession XP_209755.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC285769 BINDING SITE1 and LOC285769 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285769, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285769 BINDING SITE1 and LOC285769 BINDING SITE2, designated SEQ ID:4221 and SEQ ID:8378 respectively, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54747] Another function of GAM7933 is therefore inhibition of

LOC285769 (Accession XP_209755.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285769.

[54748] LOC285797 (Accession XP_212026.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC285797 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285797, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285797 BINDING SITE, designated SEQ ID:4100, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54749] Another function of GAM7933 is therefore inhibition of LOC285797 (Accession XP_212026.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285797.

[54750] LOC285798 (Accession XP_212024.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC285798 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC285798, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285798 BINDING SITE, designated SEQ ID:2760, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54751] Another function of GAM7933 is therefore inhibition of LOC285798 (Accession XP_212024.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285798.

[54752] LOC338981 (Accession XP_294767.2) is another GAM7933 target gene, herein designated TARGET GENE. LOC338981 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC338981, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338981 BINDING SITE, designated SEQ ID:610, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also design-

nated SEQ ID:203.

[54753] Another function of GAM7933 is therefore inhibition of LOC338981 (Accession XP_294767.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338981.

[54754] LOC340286 (Accession XP_295200.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC340286 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340286, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340286 BINDING SITE, designated SEQ ID:17638, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54755] Another function of GAM7933 is therefore inhibition of LOC340286 (Accession XP_295200.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340286.

[54756] LOC348127 (Accession XP_302662.1) is another

GAM7933 target gene, herein designated TARGET GENE. LOC348127 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348127, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348127 BINDING SITE, designated SEQ ID:610, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54757] Another function of GAM7933 is therefore inhibition of LOC348127 (Accession XP_302662.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348127.

[54758] LOC348130 (Accession XP_302666.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC348130 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348130, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348130 BINDING SITE, design-

nated SEQ ID:610, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54759] Another function of GAM7933 is therefore inhibition of LOC348130 (Accession XP_302666.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348130.

[54760] LOC348817 (Accession XP_302901.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC348817 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348817 BINDING SITE, designated SEQ ID:7451, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54761] Another function of GAM7933 is therefore inhibition of LOC348817 (Accession XP_302901.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348817.

[54762] LOC349081 (Accession XP_300935.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC349081 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349081, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349081 BINDING SITE, designated SEQ ID:4500, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54763] Another function of GAM7933 is therefore inhibition of LOC349081 (Accession XP_300935.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349081.

[54764] LOC349161 (Accession XP_302970.1) is another GAM7933 target gene, herein designated TARGET GENE. LOC349161 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349161 BINDING SITE, designated SEQ ID:13194, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54765] Another function of GAM7933 is therefore inhibition of LOC349161 (Accession XP_302970.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349161.

[54766] Leucine-rich repeat protein, neuronal 3 (LRRN3, Accession NP_060804.2) is another GAM7933 target gene, herein designated TARGET GENE. LRRN3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LRRN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRRN3 BINDING SITE, designated SEQ ID:11739, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54767] Another function of GAM7933 is therefore inhibition of Leucine-rich repeat protein, neuronal 3 (LRRN3, Accession

NP_060804.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRN3.

[54768] Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1) is another GAM7933 target gene, herein designated TARGET GENE. LZTS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LZTS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LZTS1 BINDING SITE, designated SEQ ID:5068, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54769] Another function of GAM7933 is therefore inhibition of Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1), a gene which is an essential component of the nucleoskeleton. potential role in crosslinking filaments or anchoring other molecules. it is essential for growth. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LZTS1.

[54770] The function of LZTS1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1. Mad, mothers against decapentaplegic homolog 7 (drosophila) (MADH7, Accession NP_005895.1) is another GAM7933 target gene, herein designated TARGET GENE. MADH7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MADH7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADH7 BINDING SITE, designated SEQ ID:2946, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54771] Another function of GAM7933 is therefore inhibition of Mad, mothers against decapentaplegic homolog 7 (drosophila) (MADH7, Accession NP_005895.1), a gene which may affect transcription in response to TGF- β superfamily signaling pathways, inhibits BMP/Smad1 (MADH1) signaling and therefore may be associated with Scleroderma. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Scleroderma, and of other diseases and clinical conditions associated with

MADH7.

[54772] The function of MADH7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1.MAGEG1 (Accession NP_619649.1) is another GAM7933 target gene, herein designated TARGET GENE. MAGEG1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAGEG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEG1 BINDING SITE, designated SEQ ID:10063, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54773] Another function of GAM7933 is therefore inhibition of MAGEG1 (Accession NP_619649.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAGEG1.

[54774] MGC16733 (Accession NP_291025.1) is another GAM7933 target gene, herein designated TARGET GENE. MGC16733 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by MGC16733, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16733 BINDING SITE, designated SEQ ID:13414, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54775] Another function of GAM7933 is therefore inhibition of MGC16733 (Accession NP_291025.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16733.

[54776] MGC29891 (Accession NP_653219.1) is another GAM7933 target gene, herein designated TARGET GENE. MGC29891 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC29891, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29891 BINDING SITE, designated SEQ ID:9508, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54777] Another function of GAM7933 is therefore inhibition of

MGC29891 (Accession NP_653219.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29891.

[54778] MGC5576 (Accession NP_076961.1) is another GAM7933 target gene, herein designated TARGET GENE. MGC5576 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC5576, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5576 BINDING SITE, designated SEQ ID:7009, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54779] Another function of GAM7933 is therefore inhibition of MGC5576 (Accession NP_076961.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5576.

[54780] Matrix metalloproteinase 16 (membrane-inserted) (MMP16, Accession NP_005932.2) is another GAM7933 target gene, herein designated TARGET GENE. MMP16 BINDING SITE is a target binding site found in the 3' un-

translated region of multiple transcripts of mRNA encoded by MMP16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMP16 BINDING SITE, designated SEQ ID:5291, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54781] Another function of GAM7933 is therefore inhibition of Matrix metalloproteinase 16 (membrane-inserted) (MMP16, Accession NP_005932.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMP16.

[54782] Nk3 transcription factor related, locus 1 (drosophila) (NKX3-1, Accession NP_006158.2) is another GAM7933 target gene, herein designated TARGET GENE. NKX3-1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NKX3-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NKX3-1 BINDING SITE, designated SEQ ID:15691, to the

nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54783] Another function of GAM7933 is therefore inhibition of Nk3 transcription factor related, locus 1 (drosophila) (NKX3-1, Accession NP_006158.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NKX3-1.

[54784] Nucleoporin 153kda (NUP153, Accession NP_005115.2) is another GAM7933 target gene, herein designated TARGET GENE. NUP153 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NUP153, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP153 BINDING SITE, designated SEQ ID:18750, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54785] Another function of GAM7933 is therefore inhibition of Nucleoporin 153kda (NUP153, Accession NP_005115.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with NUP153.

[54786] Pleiomorphic adenoma gene 1 (PLAG1, Accession NP_002646.1) is another GAM7933 target gene, herein designated TARGET GENE. PLAG1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PLAG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLAG1 BINDING SITE, designated SEQ ID:8200, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54787] Another function of GAM7933 is therefore inhibition of Pleiomorphic adenoma gene 1 (PLAG1, Accession NP_002646.1), a gene which contains a zinc finger domain. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLAG1.

[54788] The function of PLAG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Plastin 1 (i isoform) (PLS1, Accession NP_002661.1) is another GAM7933 target gene, herein

designated TARGET GENE. PLS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PLS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLS1 BINDING SITE, designated SEQ ID:14544, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54789] Another function of GAM7933 is therefore inhibition of Plastin 1 (i isoform) (PLS1, Accession NP_002661.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLS1.

[54790] PM5 (Accession NP_055102.2) is another GAM7933 target gene, herein designated TARGET GENE. PM5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PM5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PM5 BINDING SITE, designated SEQ ID:6496, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also des-

ignated SEQ ID:203.

[54791] Another function of GAM7933 is therefore inhibition of PM5 (Accession NP_055102.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PM5.

[54792] PP35 (Accession NP_853559.1) is another GAM7933 target gene, herein designated TARGET GENE. PP35 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PP35, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP35 BINDING SITE, designated SEQ ID:15536, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54793] Another function of GAM7933 is therefore inhibition of PP35 (Accession NP_853559.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP35.

[54794] PP35 (Accession NP_008947.1) is another GAM7933 target gene, herein designated TARGET GENE. PP35 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PP35,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP35 BINDING SITE, designated SEQ ID:15536, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54795] Another function of GAM7933 is therefore inhibition of PP35 (Accession NP_008947.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP35.

[54796] Protein phosphatase 1d magnesium-dependent, delta isoform (PPM1D, Accession NP_003611.1) is another GAM7933 target gene, herein designated TARGET GENE. PPM1D BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PPM1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPM1D BINDING SITE, designated SEQ ID:10407, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54797] Another function of GAM7933 is therefore inhibition of Protein phosphatase 1d magnesium-dependent, delta iso-

form (PPM1D, Accession NP_003611.1), a gene which might contribute to growth inhibitory pathways activated in response to dna damage in a manner. and therefore may be associated with Breast cancer. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Breast cancer, and of other diseases and clinical conditions associated with PPM1D.

[54798] The function of PPM1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2337.1. Protein phosphatase 1, regulatory (inhibitor) subunit 3a (glycogen and sarcoplasmic reticulum binding subunit, skeletal muscle) (PPP1R3A, Accession NP_002702.1) is another GAM7933 target gene, herein designated TARGET GENE. PPP1R3A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PPP1R3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R3A BINDING SITE, designated SEQ ID:500, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54799] Another function of GAM7933 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 3a (glycogen and sarcoplasmic reticulum binding subunit, skeletal muscle) (PPP1R3A, Accession NP_002702.1), a gene which regulates phosphatase activity towards glycogen synthase, active in skeletal muscle and therefore may be associated with Insulin resistance and glycemia variation. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Insulin resistance and glycemia variation, and of other diseases and clinical conditions associated with PPP1R3A.

[54800] The function of PPP1R3A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1. Palmitoyl-protein thioesterase 2 (PPT2, Accession NP_620312.1) is another GAM7933 target gene, herein designated TARGET GENE. PPT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPT2 BINDING SITE, designated SEQ ID:7654, to the nu-

cleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54801] Another function of GAM7933 is therefore inhibition of Palmitoyl-protein thioesterase 2 (PPT2, Accession NP_620312.1), a gene which is a palmitoyl- protein thioesterase 2 which possesses a different substrate specificity than PPT1. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPT2.

[54802] The function of PPT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.PRO0327 (Accession NP_054844.1) is another GAM7933 target gene, herein designated TARGET GENE. PRO0327 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRO0327, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0327 BINDING SITE, designated SEQ ID:8711, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54803] Another function of GAM7933 is therefore inhibition of PRO0327 (Accession NP_054844.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0327.

[54804] Proteasome (prosome, macropain) 26s subunit, non-atpase, 7 (mov34 homolog) (PSMD7, Accession NP_002802.2) is another GAM7933 target gene, herein designated TARGET GENE. PSMD7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PSMD7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSMD7 BINDING SITE, designated SEQ ID:11380, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54805] Another function of GAM7933 is therefore inhibition of Proteasome (prosome, macropain) 26s subunit, non-atpase, 7 (mov34 homolog) (PSMD7, Accession NP_002802.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSMD7.

[54806] Rab3b, member ras oncogene family (RAB3B, Accession NP_002858.2) is another GAM7933 target gene, herein designated TARGET GENE. RAB3B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAB3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB3B BINDING SITE, designated SEQ ID:17468, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54807] Another function of GAM7933 is therefore inhibition of Rab3b, member ras oncogene family (RAB3B, Accession NP_002858.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB3B.

[54808] Reversion-inducing-cysteine-rich protein with kazal motifs (RECK, Accession NP_066934.1) is another GAM7933 target gene, herein designated TARGET GENE. RECK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RECK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of RECK BINDING SITE, designated SEQ ID:11196, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54809] Another function of GAM7933 is therefore inhibition of Reversion-inducing-cysteine-rich protein with kazal motifs (RECK, Accession NP_066934.1), a gene which plays a role in regulation of cancer progression and tumor angiogenesis. and therefore may be associated with Cancerous tumors. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Cancerous tumors, and of other diseases and clinical conditions associated with RECK.

[54810] The function of RECK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM377.1.Regulatory factor x, 3 (influences hla class ii expression) (RFX3, Accession NP_002910.1) is another GAM7933 target gene, herein designated TARGET GENE. RFX3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RFX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RFX3 BINDING SITE, designated SEQ ID:19639, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54811] Another function of GAM7933 is therefore inhibition of Regulatory factor x, 3 (influences hla class ii expression) (RFX3, Accession NP_002910.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RFX3.

[54812] RNAC (Accession NP_005763.2) is another GAM7933 target gene, herein designated TARGET GENE. RNAC BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNAC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNAC BINDING SITE, designated SEQ ID:12142, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54813] Another function of GAM7933 is therefore inhibition of RNAC (Accession NP_005763.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with RNAC.

[54814] Spinocerebellar ataxia 1 (olivopontocerebellar ataxia 1, autosomal dominant, ataxin 1) (SCA1, Accession NP_000323.1) is another GAM7933 target gene, herein designated TARGET GENE. SCA1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCA1 BINDING SITE, designated SEQ ID:8968, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54815] Another function of GAM7933 is therefore inhibition of Spinocerebellar ataxia 1 (olivopontocerebellar ataxia 1, autosomal dominant, ataxin 1) (SCA1, Accession NP_000323.1). Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCA1.

[54816] SE20-4 (Accession NP_071400.1) is another GAM7933 target gene, herein designated TARGET GENE. SE20-4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SE20-4, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SE20-4 BINDING SITE, designated SEQ ID:3595, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54817] Another function of GAM7933 is therefore inhibition of SE20-4 (Accession NP_071400.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SE20-4.

[54818] Sh3-domain binding protein 2 (SH3BP2, Accession NP_003014.2) is another GAM7933 target gene, herein designated TARGET GENE. SH3BP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SH3BP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3BP2 BINDING SITE, designated SEQ ID:13854, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54819] Another function of GAM7933 is therefore inhibition of Sh3-domain binding protein 2 (SH3BP2, Accession

NP_003014.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BP2.

[54820] Seven in absentia homolog 1 (drosophila) (SIAH1, Accession NP_003022.1) is another GAM7933 target gene, herein designated TARGET GENE. SIAH1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SIAH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIAH1 BINDING SITE, designated SEQ ID:11362, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54821] Another function of GAM7933 is therefore inhibition of Seven in absentia homolog 1 (drosophila) (SIAH1, Accession NP_003022.1), a gene which mediates a beta-catenin degradation pathway linking p53 activation to cell cycle control. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIAH1.

[54822] The function of SIAH1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM100.1.Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1) is another GAM7933 target gene, herein designated TARGET GENE. SIGLEC8 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SIGLEC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIGLEC8 BINDING SITE, designated SEQ ID:18948, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54823] Another function of GAM7933 is therefore inhibition of Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1), a gene which is a cell adhesion molecule for postnatal neural development. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIGLEC8.

[54824] The function of SIGLEC8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.SKIP (Accession XP_051221.2) is another GAM7933 target gene, herein designated TARGET GENE.

SKIP BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SKIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SKIP BINDING SITE, designated SEQ ID:13806, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54825] Another function of GAM7933 is therefore inhibition of SKIP (Accession XP_051221.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SKIP.

[54826] Son dna binding protein (SON, Accession NP_115571.1) is another GAM7933 target gene, herein designated TARGET GENE. SON BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SON, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SON BINDING SITE, designated SEQ ID:7402, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54827] Another function of GAM7933 is therefore inhibition of Son dna binding protein (SON, Accession NP_115571.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SON.

[54828] Spastic paraplegia 7, paraplegin (pure and complicated autosomal recessive) (SPG7, Accession NP_003110.1) is another GAM7933 target gene, herein designated TARGET GENE. SPG7 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SPG7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPG7 BINDING SITE, designated SEQ ID:5110, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54829] Another function of GAM7933 is therefore inhibition of Spastic paraplegia 7, paraplegin (pure and complicated autosomal recessive) (SPG7, Accession NP_003110.1), a gene which act as an atp- dependent zinc metalloprotease. involved in the degradation of sigma- 32. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with SPG7.

[54830] The function of SPG7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1668.1. Syntaxin binding protein 1 (STXBP1, Accession NP_003156.1) is another GAM7933 target gene, herein designated TARGET GENE. STXBP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by STXBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STXBP1 BINDING SITE, designated SEQ ID:11449, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54831] Another function of GAM7933 is therefore inhibition of Syntaxin binding protein 1 (STXBP1, Accession NP_003156.1), a gene which may play a role in determining the specificity of intracellular fusion reactions. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STXBP1.

[54832] The function of STXBP1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2. Transcription factor ap-2 alpha (activating enhancer binding protein 2 alpha) (TFAP2A, Accession NP_003211.1) is another GAM7933 target gene, herein designated TARGET GENE. TFAP2A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TFAP2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TFAP2A BINDING SITE, designated SEQ ID:8195, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54833] Another function of GAM7933 is therefore inhibition of Transcription factor ap-2 alpha (activating enhancer binding protein 2 alpha) (TFAP2A, Accession NP_003211.1), a gene which may be involved in anterior eye chamber development. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TFAP2A.

[54834] The function of TFAP2A and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM967.1.UNC5H2 (Accession NP_734465.1) is another GAM7933 target gene, herein designated TARGET GENE. UNC5H2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UNC5H2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC5H2 BINDING SITE, designated SEQ ID:13226, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54835] Another function of GAM7933 is therefore inhibition of UNC5H2 (Accession NP_734465.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC5H2.

[54836] Wd repeat domain 5b (WDR5B, Accession NP_061942.2) is another GAM7933 target gene, herein designated TARGET GENE. WDR5B BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by WDR5B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR5B BINDING SITE, designated SEQ ID:20162, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54837] Another function of GAM7933 is therefore inhibition of Wd repeat domain 5b (WDR5B, Accession NP_061942.2) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR5B.

[54838] Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579889.1) is another GAM7933 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:12260, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54839] Another function of GAM7933 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Acces-

sion NP_579889.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[54840] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.ZFYVE1 (Accession NP_067083.1) is another GAM7933 target gene, herein designated TARGET GENE. ZFYVE1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by ZFYVE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFYVE1 BINDING SITE, designated SEQ ID:16631, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54841] Another function of GAM7933 is therefore inhibition of ZFYVE1 (Accession NP_067083.1) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with ZFYVE1.

[54842] ZFYVE1 (Accession XP_027302.5) is another GAM7933 target gene, herein designated TARGET GENE. ZFYVE1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by ZFYVE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFYVE1 BINDING SITE, designated SEQ ID:16631, to the nucleotide sequence of GAM7933 RNA, herein designated GAM RNA, also designated SEQ ID:203.

[54843] Another function of GAM7933 is therefore inhibition of ZFYVE1 (Accession XP_027302.5) . Accordingly, utilities of GAM7933 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFYVE1.

[54844]

[54845] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 7957 (GAM7957), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[54846] GAM7957 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM7957 was detected is described hereinabove with reference to Figs. 8-15.

[54847] GAM7957 gene, herein designated GAM GENE, and GAM7957 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[54848] GAM7957 gene encodes a GAM7957 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM7957 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM7957 precursor RNA is designated SEQ ID:42, and is provided hereinbelow with reference to the sequence listing part.

[54849] GAM7957 precursor RNA folds onto itself, forming GAM7957 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nu-

cleotide sequence of the second half thereof.

[54850] GAM7957 precursor RNA folds onto itself, forming GAM7957 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[54851] Nucleotide sequence of GAM7957 precursor RNA, designated SEQ-ID: 42, and a schematic representation of a predicted secondary folding of GAM7957 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[54852] An enzyme complex designated DICER COMPLEX, `dices` the GAM7957 folded precursor RNA into GAM7957 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy

Group: C) nucleotide sequence of GAM7957 RNA is designated SEQ ID:297, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[54853] GAM7957 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM7957 target RNA, herein designated GAM TARGET RNA. GAM7957 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5' untranslated region, a protein coding region and a 3' untranslated region, designated 5' UTR, PROTEIN CODING and 3' UTR respectively.

[54854] GAM7957 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM7957 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM7957 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limit-

ing GAM7957 RNA may have a different number of target binding sites in untranslated regions of a GAM7957 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3'UTR region, this is meant as an example only these target binding sites may be located in the 3'UTR region, the 5'UTR region, or in both 3'UTR and 5'UTR regions.

[54855] The complementary binding of GAM7957 RNA, herein designated GAM RNA, to target binding sites on GAM7957 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM7957 target RNA into GAM7957 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[54856] It is appreciated that GAM7957 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM7957 target genes. The mRNA of each one of this plurality of GAM7957 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM7957 RNA, herein designated GAM RNA, and which when bound by GAM7957 RNA causes inhibition of translation of respective one or more GAM7957 target proteins.

[54857] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM7957 gene, herein designated GAM GENE, on one or more GAM7957 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[54858] It is appreciated that specific functions and accordingly utilities of GAM7957 correlate with, and may be deduced from, the identity of the target genes which GAM7957 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[54859]

[54860]

[54861] 15E1.2 (Accession XP_290596.1) is a GAM7957 target gene, herein designated TARGET GENE. 15E1.2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by 15E1.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 15E1.2 BINDING SITE, designated SEQ ID:13155, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54862] A function of GAM7957 is therefore inhibition of 15E1.2 (Accession XP_290596.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 15E1.2.

[54863] 3PAP (Accession NP_061934.2) is another GAM7957 target gene, herein designated TARGET GENE. 3PAP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by 3PAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 3PAP BINDING SITE, designated SEQ ID:868, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also des-

ignated SEQ ID:297.

[54864] Another function of GAM7957 is therefore inhibition of 3PAP (Accession NP_061934.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 3PAP.

[54865] Atp-binding cassette, sub-family c (cftr/mrp), member 13 (ABCC13, Accession NP_742021.1) is another GAM7957 target gene, herein designated TARGET GENE. ABCC13 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABCC13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC13 BINDING SITE, designated SEQ ID:2331, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54866] Another function of GAM7957 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 13 (ABCC13, Accession NP_742021.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC13.

[54867] Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_009120.1) is another GAM7957 target gene, herein designated TARGET GENE. ABCF2 BINDING SITE1 and ABCF2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ABCF2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCF2 BINDING SITE1 and ABCF2 BINDING SITE2, designated SEQ ID:7251 and SEQ ID:3809 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54868] Another function of GAM7957 is therefore inhibition of Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_009120.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCF2.

[54869] V-abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_005148.1) is another GAM7957 target gene, herein designated TARGET GENE. ABL1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABL1,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABL1 BINDING SITE, designated SEQ ID:4947, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54870] Another function of GAM7957 is therefore inhibition of V-abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_005148.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABL1.

[54871] V-abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_009297.1) is another GAM7957 target gene, herein designated TARGET GENE. ABL1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABL1 BINDING SITE, designated SEQ ID:4947, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54872] Another function of GAM7957 is therefore inhibition of V-

abl abelson murine leukemia viral oncogene homolog 1 (ABL1, Accession NP_009297.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABL1.

[54873] Actin binding lim protein 1 (ABLIM1, Accession NP_002304.2) is another GAM7957 target gene, herein designated TARGET GENE. ABLIM1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABLIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABLIM1 BINDING SITE, designated SEQ ID:16503, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54874] Another function of GAM7957 is therefore inhibition of Actin binding lim protein 1 (ABLIM1, Accession NP_002304.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABLIM1.

[54875] Actin binding lim protein 1 (ABLIM1, Accession NP_006711.2) is another GAM7957 target gene, herein designated TARGET GENE. ABLIM1 BINDING SITE is a target

binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABLIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABLIM1 BINDING SITE, designated SEQ ID:16503, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54876] Another function of GAM7957 is therefore inhibition of Actin binding lim protein 1 (ABLIM1, Accession NP_006711.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABLIM1.

[54877] Actin binding lim protein 1 (ABLIM1, Accession NP_006710.2) is another GAM7957 target gene, herein designated TARGET GENE. ABLIM1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ABLIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABLIM1 BINDING SITE, designated SEQ ID:16503, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[54878] Another function of GAM7957 is therefore inhibition of Actin binding lim protein 1 (ABLIM1, Accession NP_006710.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABLIM1.

[54879] ACATE2 (Accession NP_036464.1) is another GAM7957 target gene, herein designated TARGET GENE. ACATE2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ACATE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACATE2 BINDING SITE, designated SEQ ID:10237, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54880] Another function of GAM7957 is therefore inhibition of ACATE2 (Accession NP_036464.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACATE2.

[54881] Angiotensin i converting enzyme (peptidyl-dipeptidase a) 1 (ACE, Accession NP_690044.1) is another GAM7957 tar-

get gene, herein designated TARGET GENE. ACE BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACE BINDING SITE, designated SEQ ID:3398, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54882] Another function of GAM7957 is therefore inhibition of Angiotensin i converting enzyme (peptidyl–dipeptidase a) 1 (ACE, Accession NP_690044.1), a gene which Angiotensin I– converting enzyme (dipeptidyl carboxypeptidase 1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACE.

[54883] The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.A disintegrin–like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 12 (ADAMTS12, Accession NP_112217.1) is another GAM7957 target gene, herein designated TARGET GENE.

ADAMTS12 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ADAMTS12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAMTS12 BINDING SITE, designated SEQ ID:7897, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54884] Another function of GAM7957 is therefore inhibition of A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 12 (ADAMTS12, Accession NP_112217.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAMTS12.

[54885] A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Accession NP_005090.1) is another GAM7957 target gene, herein designated TARGET GENE. ADAMTS4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ADAMTS4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of ADAMTS4 BINDING SITE, designated SEQ ID:15594, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54886] Another function of GAM7957 is therefore inhibition of A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Accession NP_005090.1), a gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAMTS4.

[54887] The function of ADAMTS4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1. ADAR3 (Accession NP_061172.1) is another GAM7957 target gene, herein designated TARGET GENE. ADAR3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ADAR3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAR3 BINDING SITE, designated SEQ ID:6712, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54888] Another function of GAM7957 is therefore inhibition of ADAR3 (Accession NP_061172.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAR3.

[54889] Adenosine deaminase, trna-specific 1 (ADAT1, Accession NP_036223.1) is another GAM7957 target gene, herein designated TARGET GENE. ADAT1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ADAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAT1 BINDING SITE, designated SEQ ID:15089, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54890] Another function of GAM7957 is therefore inhibition of Adenosine deaminase, trna-specific 1 (ADAT1, Accession NP_036223.1), a gene which TRNA- specific adenosine deaminase; deaminates A(37) in the anticodon loop of tRNA(Ala). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical

conditions associated with ADAT1.

[54891] The function of ADAT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM236.1. Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1) is another GAM7957 target gene, herein designated TARGET GENE. ADCY1 BINDING SITE1 and ADCY1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ADCY1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY1 BINDING SITE1 and ADCY1 BINDING SITE2, designated SEQ ID:18690 and SEQ ID:17764 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54892] Another function of GAM7957 is therefore inhibition of Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1), a gene which a calmodulin- sensitive adenylyl cyclase. it may play a role in memory acquisition and learning. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with ADCY1.

[54893] The function of ADCY1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1. Adenylate cyclase activating polypeptide 1 (pituitary) (ADCYAP1, Accession NP_001108.1) is another GAM7957 target gene, herein designated TARGET GENE. ADCYAP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ADCYAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCYAP1 BINDING SITE, designated SEQ ID:13163, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54894] Another function of GAM7957 is therefore inhibition of Adenylate cyclase activating polypeptide 1 (pituitary) (ADCYAP1, Accession NP_001108.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCYAP1.

[54895] Alcohol dehydrogenase 4 (class ii), pi polypeptide (ADH4,

Accession NP_000661.1) is another GAM7957 target gene, herein designated TARGET GENE. ADH4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ADH4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADH4 BINDING SITE, designated SEQ ID:8767, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54896] Another function of GAM7957 is therefore inhibition of Alcohol dehydrogenase 4 (class ii), pi polypeptide (ADH4, Accession NP_000661.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADH4.

[54897] AF020591 (Accession NP_055295.1) is another GAM7957 target gene, herein designated TARGET GENE. AF020591 BINDING SITE1 and AF020591 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by AF020591, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AF020591 BINDING SITE1 and

AF020591 BINDING SITE2, designated SEQ ID:5252 and SEQ ID:10612 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54898] Another function of GAM7957 is therefore inhibition of AF020591 (Accession NP_055295.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AF020591.

[54899] Agmatine ureohydrolase (agmatinase) (AGMAT, Accession NP_079034.2) is another GAM7957 target gene, herein designated TARGET GENE. AGMAT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AGMAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGMAT BINDING SITE, designated SEQ ID:17097, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54900] Another function of GAM7957 is therefore inhibition of Agmatine ureohydrolase (agmatinase) (AGMAT, Accession NP_079034.2) . Accordingly, utilities of GAM7957 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with AGMAT.

[54901] Agouti related protein homolog (mouse) (AGRP, Accession NP_001129.1) is another GAM7957 target gene, herein designated TARGET GENE. AGRP BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by AGRP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGRP BINDING SITE, designated SEQ ID:6741, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54902] Another function of GAM7957 is therefore inhibition of Agouti related protein homolog (mouse) (AGRP, Accession NP_001129.1), a gene which plays a role in weight homeostasis. and therefore may be associated with Obesity. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Obesity, and of other diseases and clinical conditions associated with AGRP.

[54903] The function of AGRP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM385.2.Aryl hydrocarbon receptor (AHR, Accession NP_001612.1) is another GAM7957 target gene, herein designated TARGET GENE. AHR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AHR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AHR BINDING SITE, designated SEQ ID:4150, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54904] Another function of GAM7957 is therefore inhibition of Aryl hydrocarbon receptor (AHR, Accession NP_001612.1), a gene which plays a role in modulating carcinogenesis through the induction of xenobiotic- metabolizing enzymes and therefore may be associated with Stomach tumors. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Stomach tumors, and of other diseases and clinical conditions associated with AHR.

[54905] The function of AHR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Aryl hydrocarbon receptor interacting protein-like 1 (AIPL1, Accession NP_055151.2) is another GAM7957 target gene, herein designated TARGET GENE. AIPL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AIPL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AIPL1 BINDING SITE, designated SEQ ID:14786, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54906] Another function of GAM7957 is therefore inhibition of Aryl hydrocarbon receptor interacting protein-like 1 (AIPL1, Accession NP_055151.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AIPL1.

[54907] Autoimmune regulator (automimmune polyendocrinopathy candidiasis ectodermal dystrophy) (AIRE, Accession NP_000374.1) is another GAM7957 target gene, herein designated TARGET GENE. AIRE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AIRE, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AIRE BINDING SITE, designated SEQ ID:18688, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54908] Another function of GAM7957 is therefore inhibition of Autoimmune regulator (automimmune polyendocrinopathy candidiasis ectodermal dystrophy) (AIRE, Accession NP_000374.1), a gene which Putative transcription factor; contains two PHD- type zinc finger motifs. and therefore is associated with Autoimmune poly- endocrinopathy syndrome. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Autoimmune poly- endocrinopathy syndrome, and of other diseases and clinical conditions associated with AIRE.

[54909] The function of AIRE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.A kinase (prka) anchor protein 11 (AKAP11, Accession NP_652761.1) is another GAM7957 target gene, herein designated TARGET GENE. AKAP11 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by AKAP11, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKAP11 BINDING SITE, designated SEQ ID:3323, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54910] Another function of GAM7957 is therefore inhibition of A kinase (prka) anchor protein 11 (AKAP11, Accession NP_652761.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP11.

[54911] Aldo-keto reductase family 1, member b10 (aldose reductase) (AKR1B10, Accession NP_064695.2) is another GAM7957 target gene, herein designated TARGET GENE. AKR1B10 BINDING SITE1 and AKR1B10 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by AKR1B10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKR1B10 BINDING SITE1 and AKR1B10 BINDING SITE2, designated SEQ ID:10437 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[54912] Another function of GAM7957 is therefore inhibition of Aldo-keto reductase family 1, member b10 (aldose reductase) (AKR1B10, Accession NP_064695.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKR1B10.

[54913] Aldo-keto reductase family 1, member d1 (delta 4-3-ketosteroid-5-beta-reductase) (AKR1D1, Accession NP_005980.1) is another GAM7957 target gene, herein designated TARGET GENE. AKR1D1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AKR1D1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKR1D1 BINDING SITE, designated SEQ ID:19497, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54914] Another function of GAM7957 is therefore inhibition of Aldo-keto reductase family 1, member d1 (delta 4-3-ketosteroid-5-beta-reductase) (AKR1D1, Accession NP_005980.1) . Accordingly, utilities of GAM7957 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with AKR1D1.

[54915] Aldehyde dehydrogenase 3 family, member b1 (ALDH3B1, Accession NP_000685.1) is another GAM7957 target gene, herein designated TARGET GENE. ALDH3B1 BINDING SITE1 through ALDH3B1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by ALDH3B1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH3B1 BINDING SITE1 through ALDH3B1 BINDING SITE3, designated SEQ ID:15516, SEQ ID:14700 and SEQ ID:10057 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54916] Another function of GAM7957 is therefore inhibition of Aldehyde dehydrogenase 3 family, member b1 (ALDH3B1, Accession NP_000685.1), a gene which may play a major role in the detoxification of aldehydes generated by alcohol metabolism and lipid peroxidation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH3B1.

[54917] The function of ALDH3B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Aldehyde dehydrogenase 5 family, member a1 (succinate-semialdehyde dehydrogenase) (ALDH5A1, Accession NP_733936.1) is another GAM7957 target gene, herein designated TARGET GENE. ALDH5A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ALDH5A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH5A1 BINDING SITE, designated SEQ ID:6817, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54918] Another function of GAM7957 is therefore inhibition of Aldehyde dehydrogenase 5 family, member a1 (succinate-semialdehyde dehydrogenase) (ALDH5A1, Accession NP_733936.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH5A1.

[54919] Aldehyde dehydrogenase 5 family, member a1

(succinate-semialdehyde dehydrogenase) (ALDH5A1, Accession NP_001071.1) is another GAM7957 target gene, herein designated TARGET GENE. ALDH5A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ALDH5A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH5A1 BINDING SITE, designated SEQ ID:6817, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54920] Another function of GAM7957 is therefore inhibition of Aldehyde dehydrogenase 5 family, member a1 (succinate-semialdehyde dehydrogenase) (ALDH5A1, Accession NP_001071.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH5A1.

[54921] Aldehyde dehydrogenase 8 family, member a1 (ALDH8A1, Accession NP_739577.1) is another GAM7957 target gene, herein designated TARGET GENE. ALDH8A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by

ALDH8A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH8A1 BINDING SITE, designated SEQ ID:15129, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54922] Another function of GAM7957 is therefore inhibition of Aldehyde dehydrogenase 8 family, member a1 (ALDH8A1, Accession NP_739577.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH8A1.

[54923] Aldehyde dehydrogenase 8 family, member a1 (ALDH8A1, Accession NP_072090.1) is another GAM7957 target gene, herein designated TARGET GENE. ALDH8A1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ALDH8A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH8A1 BINDING SITE, designated SEQ ID:15129, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ

ID:297.

[54924] Another function of GAM7957 is therefore inhibition of Aldehyde dehydrogenase 8 family, member a1 (ALDH8A1, Accession NP_072090.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH8A1.

[54925] Alkaline phosphatase, placental (regan isozyme) (ALPP, Accession NP_001623.2) is another GAM7957 target gene, herein designated TARGET GENE. ALPP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ALPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALPP BINDING SITE, designated SEQ ID:15341, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54926] Another function of GAM7957 is therefore inhibition of Alkaline phosphatase, placental (regan isozyme) (ALPP, Accession NP_001623.2), a gene which is a placental alkaline phosphatase. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALPP.

[54927] The function of ALPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM206.1.Reserved (ALS2CR9, Accession NP_079528.1) is another GAM7957 target gene, herein designated TARGET GENE. ALS2CR9 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ALS2CR9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALS2CR9 BINDING SITE, designated SEQ ID:16955, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54928] Another function of GAM7957 is therefore inhibition of Reserved (ALS2CR9, Accession NP_079528.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALS2CR9.

[54929] Ac-like transposable element (ALTE, Accession NP_004720.1) is another GAM7957 target gene, herein designated TARGET GENE. ALTE BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by ALTE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALTE BINDING SITE, designated SEQ ID:6238, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54930] Another function of GAM7957 is therefore inhibition of Ac-like transposable element (ALTE, Accession NP_004720.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALTE.

[54931] ANAPC7 (Accession NP_057322.1) is another GAM7957 target gene, herein designated TARGET GENE. ANAPC7 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ANAPC7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANAPC7 BINDING SITE, designated SEQ ID:17768, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54932] Another function of GAM7957 is therefore inhibition of

ANAPC7 (Accession NP_057322.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANAPC7.

[54933] ANKFY1 (Accession NP_057460.2) is another GAM7957 target gene, herein designated TARGET GENE. ANKFY1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ANKFY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKFY1 BINDING SITE, designated SEQ ID:17805, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54934] Another function of GAM7957 is therefore inhibition of ANKFY1 (Accession NP_057460.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKFY1.

[54935] Ankylosis, progressive homolog (mouse) (ANKH, Accession NP_473368.1) is another GAM7957 target gene, herein designated TARGET GENE. ANKH BINDING SITE is a

target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ANKH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKH BINDING SITE, designated SEQ ID:6937, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54936] Another function of GAM7957 is therefore inhibition of Ankylosis, progressive homolog (mouse) (ANKH, Accession NP_473368.1), a gene which regulates intra- and extracellular levels of inorganic pyrophosphate (ppi), probably functioning as ppi transporter. and therefore is associated with Craniometaphyseal dysplasia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Craniometaphyseal dysplasia, and of other diseases and clinical conditions associated with ANKH.

[54937] The function of ANKH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2.Acyloxyacyl hydrolase (neutrophil) (AOAH, Accession NP_001628.1) is another GAM7957 target gene, herein designated TARGET GENE. AOA BINDING SITE is a

target binding site found in the 3' untranslated region of mRNA encoded by AOA_H, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AOA_H BINDING SITE, designated SEQ ID:3636, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54938] Another function of GAM7957 is therefore inhibition of Acyloxyacyl hydrolase (neutrophil) (AOA_H, Accession NP_001628.1), a gene which removes the secondary (acyloxyacyl-linked) fatty acyl chains from the lipid a region of bacterial lipopolysaccharides. and therefore may be associated with Gram-negative bacterium infection. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Gram-negative bacterium infection., and of other diseases and clinical conditions associated with AOA_H.

[54939] The function of AOA_H and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1255.2.Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_542118.1) is another GAM7957

target gene, herein designated TARGET GENE. AP1GBP1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by AP1GBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1GBP1 BINDING SITE, designated SEQ ID:9627, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54940] Another function of GAM7957 is therefore inhibition of Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_542118.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1GBP1.

[54941] AP1S3 (Accession NP_848929.1) is another GAM7957 target gene, herein designated TARGET GENE. AP1S3 BINDING SITE1 and AP1S3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by AP1S3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1S3 BINDING

SITE1 and AP1S3 BINDING SITE2, designated SEQ ID:10435 and SEQ ID:14818 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54942] Another function of GAM7957 is therefore inhibition of AP1S3 (Accession NP_848929.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1S3.

[54943] Adaptor-related protein complex 4, sigma 1 subunit (AP4S1, Accession NP_009008.2) is another GAM7957 target gene, herein designated TARGET GENE. AP4S1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by AP4S1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP4S1 BINDING SITE, designated SEQ ID:17888, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54944] Another function of GAM7957 is therefore inhibition of Adaptor-related protein complex 4, sigma 1 subunit (AP4S1, Accession NP_009008.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with AP4S1.

[54945] APBB3 (Accession NP_006042.2) is another GAM7957 target gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated SEQ ID:479, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54946] Another function of GAM7957 is therefore inhibition of APBB3 (Accession NP_006042.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[54947] APBB3 (Accession NP_573422.1) is another GAM7957 target gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated

SEQ ID:479, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54948] Another function of GAM7957 is therefore inhibition of APBB3 (Accession NP_573422.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[54949] APBB3 (Accession NP_573419.1) is another GAM7957 target gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated SEQ ID:479, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54950] Another function of GAM7957 is therefore inhibition of APBB3 (Accession NP_573419.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[54951] APBB3 (Accession NP_573420.1) is another GAM7957 target gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 5` untrans-

lated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated SEQ ID:479, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54952] Another function of GAM7957 is therefore inhibition of APBB3 (Accession NP_573420.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[54953] APBB3 (Accession NP_573418.1) is another GAM7957 target gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated SEQ ID:479, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54954] Another function of GAM7957 is therefore inhibition of APBB3 (Accession NP_573418.1) . Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[54955] APBB3 (Accession NP_573421.1) is another GAM7957 target gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated SEQ ID:479, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54956] Another function of GAM7957 is therefore inhibition of APBB3 (Accession NP_573421.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[54957] APG10L (Accession NP_113670.1) is another GAM7957 target gene, herein designated TARGET GENE. APG10L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by APG10L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

APG10L BINDING SITE, designated SEQ ID:10656, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54958] Another function of GAM7957 is therefore inhibition of APG10L (Accession NP_113670.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APG10L.

[54959] Apolipoprotein b mrna editing enzyme, catalytic polypeptide-like 3a (APOBEC3A, Accession NP_663745.1) is another GAM7957 target gene, herein designated TARGET GENE. APOBEC3A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by APOBEC3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOBEC3A BINDING SITE, designated SEQ ID:7049, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54960] Another function of GAM7957 is therefore inhibition of Apolipoprotein b mrna editing enzyme, catalytic polypeptide-like 3a (APOBEC3A, Accession NP_663745.1) . Ac-

cordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOBEC3A.

[54961] Apolipoprotein b mRNA editing enzyme, catalytic polypeptide-like 3f (APOBEC3F, Accession NP_660341.2) is another GAM7957 target gene, herein designated TARGET GENE. APOBEC3F BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by APOBEC3F, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOBEC3F BINDING SITE, designated SEQ ID:10042, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54962] Another function of GAM7957 is therefore inhibition of Apolipoprotein b mRNA editing enzyme, catalytic polypeptide-like 3f (APOBEC3F, Accession NP_660341.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOBEC3F.

[54963] Apolipoprotein I, 1 (APOL1, Accession NP_663318.1) is another GAM7957 target gene, herein designated TARGET

GENE. APOL1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by APOL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL1 BINDING SITE, designated SEQ ID:4061, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54964] Another function of GAM7957 is therefore inhibition of Apolipoprotein I, 1 (APOL1, Accession NP_663318.1), a gene which may participate in reverse cholesterol transport from peripheral cells to the liver. and therefore may be associated with Schizophrenia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Schizophrenia, and of other diseases and clinical conditions associated with APOL1.

[54965] The function of APOL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Apolipoprotein I, 1 (APOL1, Accession NP_003652.2) is another GAM7957 target gene, herein designated TARGET GENE. APOL1 BINDING SITE is a target

binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by APOL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL1 BINDING SITE, designated SEQ ID:4061, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54966] Another function of GAM7957 is therefore inhibition of Apolipoprotein I, 1 (APOL1, Accession NP_003652.2), a gene which may participate in reverse cholesterol transport from peripheral cells to the liver. and therefore may be associated with Schizophrenia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Schizophrenia, and of other diseases and clinical conditions associated with APOL1.

[54967] The function of APOL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.APXL2 (Accession NP_597713.1) is another GAM7957 target gene, herein designated TARGET GENE. APXL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by APXL2, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APXL2 BINDING SITE, designated SEQ ID:14254, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54968] Another function of GAM7957 is therefore inhibition of APXL2 (Accession NP_597713.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APXL2.

[54969] Rac/cdc42 guanine nucleotide exchange factor (gef) 6 (ARHGEF6, Accession NP_004831.1) is another GAM7957 target gene, herein designated TARGET GENE. ARHGEF6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ARHGEF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF6 BINDING SITE, designated SEQ ID:14790, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54970] Another function of GAM7957 is therefore inhibition of Rac/cdc42 guanine nucleotide exchange factor (gef) 6

(ARHGEF6, Accession NP_004831.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF6.

[54971] ARLTS1 (Accession NP_612459.1) is another GAM7957 target gene, herein designated TARGET GENE. ARLTS1 BINDING SITE1 and ARLTS1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ARLTS1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARLTS1 BINDING SITE1 and ARLTS1 BINDING SITE2, designated SEQ ID:1904 and SEQ ID:11695 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54972] Another function of GAM7957 is therefore inhibition of ARLTS1 (Accession NP_612459.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARLTS1.

[54973] Aryl-hydrocarbon receptor nuclear translocator 2 (ARNT2, Accession NP_055677.1) is another GAM7957 target gene, herein designated TARGET GENE. ARNT2 BINDING SITE is a

target binding site found in the 3' untranslated region of mRNA encoded by ARNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARNT2 BINDING SITE, designated SEQ ID:13998, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54974] Another function of GAM7957 is therefore inhibition of Aryl-hydrocarbon receptor nuclear translocator 2 (ARNT2, Accession NP_055677.1), a gene which specifically recognizes the xenobiotic response element (xre). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARNT2.

[54975] The function of ARNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1. Ankyrin repeat and socs box-containing 8 (ASB8, Accession NP_077000.1) is another GAM7957 target gene, herein designated TARGET GENE. ASB8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ASB8, corresponding to a tar-

get binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB8 BINDING SITE, designated SEQ ID:4423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54976] Another function of GAM7957 is therefore inhibition of Ankyrin repeat and socs box-containing 8 (ASB8, Accession NP_077000.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB8.

[54977] ASK (Accession NP_006707.1) is another GAM7957 target gene, herein designated TARGET GENE. ASK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ASK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASK BINDING SITE, designated SEQ ID:838, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54978] Another function of GAM7957 is therefore inhibition of ASK (Accession NP_006707.1) . Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASK.

[54979] Astrotactin 2 (ASTN2, Accession NP_054729.1) is another GAM7957 target gene, herein designated TARGET GENE. ASTN2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ASTN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASTN2 BINDING SITE, designated SEQ ID:14819, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54980] Another function of GAM7957 is therefore inhibition of Astrotactin 2 (ASTN2, Accession NP_054729.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASTN2.

[54981] Atpase, na⁺/k⁺ transporting, alpha 2 (+) polypeptide (ATP1A2, Accession NP_000693.1) is another GAM7957 target gene, herein designated TARGET GENE. ATP1A2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ATP1A2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1A2 BINDING SITE, designated SEQ ID:15326, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54982] Another function of GAM7957 is therefore inhibition of Atpase, Na^+/K^+ transporting, alpha 2 (+) polypeptide (ATP1A2, Accession NP_000693.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1A2.

[54983] Atpase, $(\text{Na}^+)/\text{K}^+$ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) is another GAM7957 target gene, herein designated TARGET GENE. ATP1B4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ATP1B4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1B4 BINDING SITE, designated SEQ ID:13338, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54984] Another function of GAM7957 is therefore inhibition of

ATPase, (na+)/k⁺ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1B4.

[54985] Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) is another GAM7957 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:1792, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54986] Another function of GAM7957 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[54987] Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) is another GAM7957 target gene, herein

designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:1792, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54988] Another function of GAM7957 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[54989] Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 2 (B4GALT2, Accession NP_003771.1) is another GAM7957 target gene, herein designated TARGET GENE. B4GALT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by B4GALT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT2 BIND-

ING SITE, designated SEQ ID:2774, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54990] Another function of GAM7957 is therefore inhibition of Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 2 (B4GALT2, Accession NP_003771.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT2.

[54991] Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 2 (B4GALT2, Accession NP_085076.1) is another GAM7957 target gene, herein designated TARGET GENE. B4GALT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by B4GALT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT2 BINDING SITE, designated SEQ ID:2774, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54992] Another function of GAM7957 is therefore inhibition of Udp-gal:betaglcnac beta 1,4- galactosyltransferase,

polypeptide 2 (B4GALT2, Accession NP_085076.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT2.

[54993] BANP (Accession NP_524576.1) is another GAM7957 target gene, herein designated TARGET GENE. BANP BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by BANP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BANP BINDING SITE, designated SEQ ID:13451, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54994] Another function of GAM7957 is therefore inhibition of BANP (Accession NP_524576.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BANP.

[54995] BANP (Accession NP_060339.2) is another GAM7957 target gene, herein designated TARGET GENE. BANP BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by BANP, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BANP BINDING SITE, designated SEQ ID:13451, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54996] Another function of GAM7957 is therefore inhibition of BANP (Accession NP_060339.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BANP.

[54997] Breast cancer anti-estrogen resistance 1 (BCAR1, Accession NP_055382.1) is another GAM7957 target gene, herein designated TARGET GENE. BCAR1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BCAR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCAR1 BINDING SITE, designated SEQ ID:16661, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[54998] Another function of GAM7957 is therefore inhibition of Breast cancer anti-estrogen resistance 1 (BCAR1, Accession NP_055382.1), a gene which plays a role for tyro-

sine- kinase- based signaling to cell adhesion. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCAR1.

[54999] The function of BCAR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Breast carcinoma amplified sequence 1 (BCAS1, Accession NP_003648.1) is another GAM7957 target gene, herein designated TARGET GENE. BCAS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BCAS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCAS1 BINDING SITE, designated SEQ ID:13893, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55000] Another function of GAM7957 is therefore inhibition of Breast carcinoma amplified sequence 1 (BCAS1, Accession NP_003648.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCAS1.

[55001] Bifunctional apoptosis regulator (BFAR, Accession NP_057645.1) is another GAM7957 target gene, herein designated TARGET GENE. BFAR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BFAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BFAR BINDING SITE, designated SEQ ID:15922, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55002] Another function of GAM7957 is therefore inhibition of Bifunctional apoptosis regulator (BFAR, Accession NP_057645.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BFAR.

[55003] Betaine-homocysteine methyltransferase 2 (BHMT2, Accession NP_060084.2) is another GAM7957 target gene, herein designated TARGET GENE. BHMT2 BINDING SITE1 and BHMT2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BHMT2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of BHMT2 BINDING SITE1 and BHMT2 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:10571 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55004] Another function of GAM7957 is therefore inhibition of Betaine-homocysteine methyltransferase 2 (BHMT2, Accession NP_060084.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BHMT2.

[55005] Baculoviral iap repeat-containing 1 (BIRC1, Accession NP_004527.1) is another GAM7957 target gene, herein designated TARGET GENE. BIRC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BIRC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BIRC1 BINDING SITE, designated SEQ ID:12796, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55006] Another function of GAM7957 is therefore inhibition of Baculoviral iap repeat-containing 1 (BIRC1, Accession

NP_004527.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BIRC1.

[55007] Baculoviral iap repeat-containing 5 (survivin) (BIRC5, Accession NP_001159.1) is another GAM7957 target gene, herein designated TARGET GENE. BIRC5 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by BIRC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BIRC5 BINDING SITE, designated SEQ ID:1829, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55008] Another function of GAM7957 is therefore inhibition of Baculoviral iap repeat-containing 5 (survivin) (BIRC5, Accession NP_001159.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BIRC5.

[55009] Basic, immunoglobulin-like variable motif containing (BIVM, Accession NP_060163.2) is another GAM7957 target gene, herein designated TARGET GENE. BIVM BINDING SITE is a target binding site found in the 3' untranslated

region of mRNA encoded by BIVM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BIVM BINDING SITE, designated SEQ ID:14233, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55010] Another function of GAM7957 is therefore inhibition of Basic, immunoglobulin-like variable motif containing (BIVM, Accession NP_060163.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BIVM.

[55011] BMF (Accession NP_277038.1) is another GAM7957 target gene, herein designated TARGET GENE. BMF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BMF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BMF BINDING SITE, designated SEQ ID:1509, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55012] Another function of GAM7957 is therefore inhibition of

BMF (Accession NP_277038.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMF.

[55013] Bone morphogenetic protein 8 (osteogenic protein 2) (BMP8, Accession NP_001711.2) is another GAM7957 target gene, herein designated TARGET GENE. BMP8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BMP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BMP8 BINDING SITE, designated SEQ ID:11740, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55014] Another function of GAM7957 is therefore inhibition of Bone morphogenetic protein 8 (osteogenic protein 2) (BMP8, Accession NP_001711.2), a gene which plays a role in calcium regulation and bone homeostasis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMP8.

[55015] The function of BMP8 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM347.1.3'(2'), 5'-bisphosphate nucleotidase 1 (BPNT1, Accession XP_035738.1) is another GAM7957 target gene, herein designated TARGET GENE. BPNT1 BINDING SITE1 and BPNT1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BPNT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BPNT1 BINDING SITE1 and BPNT1 BINDING SITE2, designated SEQ ID:3936 and SEQ ID:3605 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55016] Another function of GAM7957 is therefore inhibition of 3'(2'), 5'-bisphosphate nucleotidase 1 (BPNT1, Accession XP_035738.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BPNT1.

[55017] Breast cancer 1, early onset (BRCA1, Accession NP_009229.1) is another GAM7957 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2 are target binding sites found in

untranslated regions of multiple transcripts of mRNA encoded by BRCA1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2, designated SEQ ID:19976 and SEQ ID:19976 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55018] Another function of GAM7957 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009229.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[55019] Breast cancer 1, early onset (BRCA1, Accession NP_009231.1) is another GAM7957 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRCA1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE1 and BRCA1

BINDING SITE2, designated SEQ ID:19976 and SEQ ID:19976 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55020] Another function of GAM7957 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009231.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[55021] Breast cancer 1, early onset (BRCA1, Accession NP_009232.1) is another GAM7957 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRCA1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2, designated SEQ ID:19976 and SEQ ID:19976 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55022] Another function of GAM7957 is therefore inhibition of

Breast cancer 1, early onset (BRCA1, Accession NP_009232.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[55023] Breast cancer 1, early onset (BRCA1, Accession NP_009230.1) is another GAM7957 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRCA1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2, designated SEQ ID:19976 and SEQ ID:19976 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55024] Another function of GAM7957 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009230.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[55025] Breast cancer 1, early onset (BRCA1, Accession

NP_009235.1) is another GAM7957 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRCA1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2, designated SEQ ID:19976 and SEQ ID:19976 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55026] Another function of GAM7957 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009235.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[55027] Breast cancer 1, early onset (BRCA1, Accession NP_009236.1) is another GAM7957 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRCA1, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2, designated SEQ ID:19976 and SEQ ID:9421 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55028] Another function of GAM7957 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009236.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[55029] Breast cancer 1, early onset (BRCA1, Accession NP_009225.1) is another GAM7957 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BRCA1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE1 and BRCA1 BINDING SITE2, designated SEQ ID:19976 and SEQ ID:19976 respectively, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55030] Another function of GAM7957 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009225.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRCA1.

[55031] Btb (poz) domain containing 5 (BTBD5, Accession NP_060128.1) is another GAM7957 target gene, herein designated TARGET GENE. BTBD5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BTBD5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTBD5 BINDING SITE, designated SEQ ID:1201, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55032] Another function of GAM7957 is therefore inhibition of Btb (poz) domain containing 5 (BTBD5, Accession NP_060128.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTBD5.

[55033] Butyrophilin, subfamily 3, member a2 (BTN3A2, Accession NP_008978.1) is another GAM7957 target gene, herein designated TARGET GENE. BTN3A2 BINDING SITE1 and BTN3A2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BTN3A2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN3A2 BINDING SITE1 and BTN3A2 BINDING SITE2, designated SEQ ID:14305 and SEQ ID:15108 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55034] Another function of GAM7957 is therefore inhibition of Butyrophilin, subfamily 3, member a2 (BTN3A2, Accession NP_008978.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN3A2.

[55035] Chromosome 12 open reading frame 2 (C12orf2, Accession NP_009142.2) is another GAM7957 target gene, herein designated TARGET GENE. C12orf2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C12orf2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C12orf2 BINDING SITE, designated SEQ ID:9765, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55036] Another function of GAM7957 is therefore inhibition of Chromosome 12 open reading frame 2 (C12orf2, Accession NP_009142.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C12orf2.

[55037] Chromosome 13 open reading frame 1 (C13orf1, Accession NP_065189.1) is another GAM7957 target gene, herein designated TARGET GENE. C13orf1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C13orf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C13orf1 BINDING SITE, designated SEQ ID:13358, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55038] Another function of GAM7957 is therefore inhibition of Chromosome 13 open reading frame 1 (C13orf1, Acces-

sion NP_065189.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C13orf1.

[55039] C14orf102 (Accession NP_060440.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf102 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf102 BINDING SITE, designated SEQ ID:11463, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55040] Another function of GAM7957 is therefore inhibition of C14orf102 (Accession NP_060440.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf102.

[55041] C14orf105 (Accession NP_060638.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf105 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf105, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf105 BINDING SITE, designated SEQ ID:13632, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55042] Another function of GAM7957 is therefore inhibition of C14orf105 (Accession NP_060638.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf105.

[55043] C14orf117 (Accession NP_061148.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf117 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf117 BINDING SITE, designated SEQ ID:4003, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55044] Another function of GAM7957 is therefore inhibition of C14orf117 (Accession NP_061148.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with C14orf117.

[55045] C14orf139 (Accession NP_078909.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf139 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf139 BINDING SITE, designated SEQ ID:19330, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55046] Another function of GAM7957 is therefore inhibition of C14orf139 (Accession NP_078909.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf139.

[55047] C14orf143 (Accession NP_660274.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf143 BINDING SITE1 and C14orf143 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C14orf143, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf143 BINDING SITE1 and C14orf143 BINDING SITE2, designated SEQ ID:2780 and SEQ ID:4559 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55048] Another function of GAM7957 is therefore inhibition of C14orf143 (Accession NP_660274.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf143.

[55049] Chromosome 14 open reading frame 23 (C14orf23, Accession XP_096757.2) is another GAM7957 target gene, herein designated TARGET GENE. C14orf23 BINDING SITE1 and C14orf23 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C14orf23, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf23 BINDING SITE1 and C14orf23 BINDING SITE2, designated SEQ ID:13155 and SEQ ID:8019 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55050] Another function of GAM7957 is therefore inhibition of Chromosome 14 open reading frame 23 (C14orf23, Accession XP_096757.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf23.

[55051] C14orf24 (Accession NP_775878.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf24 BINDING SITE1 and C14orf24 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C14orf24, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf24 BINDING SITE1 and C14orf24 BINDING SITE2, designated SEQ ID:7122 and SEQ ID:16828 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55052] Another function of GAM7957 is therefore inhibition of C14orf24 (Accession NP_775878.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf24.

[55053] Chromosome 14 open reading frame 4 (C14orf4, Accession XP_041104.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C14orf4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf4 BINDING SITE, designated SEQ ID:10582, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55054] Another function of GAM7957 is therefore inhibition of Chromosome 14 open reading frame 4 (C14orf4, Accession XP_041104.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf4.

[55055] Chromosome 14 open reading frame 43 (C14orf43, Ac-

cession XP_040343.3) is another GAM7957 target gene, herein designated TARGET GENE. C14orf43 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf43, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf43 BINDING SITE, designated SEQ ID:14786, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55056] Another function of GAM7957 is therefore inhibition of Chromosome 14 open reading frame 43 (C14orf43, Accession XP_040343.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf43.

[55057] Chromosome 14 open reading frame 46 (C14orf46, Accession XP_040376.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf46 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C14orf46, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf46

BINDING SITE, designated SEQ ID:4702, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55058] Another function of GAM7957 is therefore inhibition of Chromosome 14 open reading frame 46 (C14orf46, Accession XP_040376.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf46.

[55059] C14orf70 (Accession XP_211096.1) is another GAM7957 target gene, herein designated TARGET GENE. C14orf70 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C14orf70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf70 BINDING SITE, designated SEQ ID:14106, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55060] Another function of GAM7957 is therefore inhibition of C14orf70 (Accession XP_211096.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf70.

[55061] Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) is another GAM7957 target gene, herein designated TARGET GENE. C1orf24 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by C1orf24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:10419, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55062] Another function of GAM7957 is therefore inhibition of Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24.

[55063] Chromosome 1 open reading frame 33 (C1orf33, Accession NP_057267.2) is another GAM7957 target gene, herein designated TARGET GENE. C1orf33 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C1orf33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of C1orf33 BINDING SITE, designated SEQ ID:15057, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55064] Another function of GAM7957 is therefore inhibition of Chromosome 1 open reading frame 33 (C1orf33, Accession NP_057267.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf33.

[55065] Chromosome 1 open reading frame 34 (C1orf34, Accession XP_027172.1) is another GAM7957 target gene, herein designated TARGET GENE. C1orf34 BINDING SITE1 and C1orf34 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C1orf34, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf34 BINDING SITE1 and C1orf34 BINDING SITE2, designated SEQ ID:18827 and SEQ ID:18691 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55066] Another function of GAM7957 is therefore inhibition of Chromosome 1 open reading frame 34 (C1orf34, Acces-

sion XP_027172.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf34.

[55067] Chromosome 20 open reading frame 108 (C20orf108, Accession NP_543011.1) is another GAM7957 target gene, herein designated TARGET GENE. C20orf108 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf108, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf108 BINDING SITE, designated SEQ ID:9763, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55068] Another function of GAM7957 is therefore inhibition of Chromosome 20 open reading frame 108 (C20orf108, Accession NP_543011.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf108.

[55069] Chromosome 20 open reading frame 12 (C20orf12, Accession NP_060622.2) is another GAM7957 target gene, herein designated TARGET GENE. C20orf12 BINDING SITE is a target binding site found in the 3' untranslated re-

gion of mRNA encoded by C20orf12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf12 BINDING SITE, designated SEQ ID:4680, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55070] Another function of GAM7957 is therefore inhibition of Chromosome 20 open reading frame 12 (C20orf12, Accession NP_060622.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf12.

[55071] Chromosome 20 open reading frame 142 (C20orf142, Accession XP_300782.1) is another GAM7957 target gene, herein designated TARGET GENE. C20orf142 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf142 BINDING SITE, designated SEQ ID:12434, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55072] Another function of GAM7957 is therefore inhibition of Chromosome 20 open reading frame 142 (C20orf142, Accession XP_300782.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf142.

[55073] Chromosome 20 open reading frame 172 (C20orf172, Accession NP_079194.2) is another GAM7957 target gene, herein designated TARGET GENE. C20orf172 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf172, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf172 BINDING SITE, designated SEQ ID:5441, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55074] Another function of GAM7957 is therefore inhibition of Chromosome 20 open reading frame 172 (C20orf172, Accession NP_079194.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf172.

[55075] Chromosome 20 open reading frame 175 (C20orf175, Accession NP_543019.1) is another GAM7957 target gene,

herein designated TARGET GENE. C20orf175 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf175, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf175 BINDING SITE, designated SEQ ID:2547, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55076] Another function of GAM7957 is therefore inhibition of Chromosome 20 open reading frame 175 (C20orf175, Accession NP_543019.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf175.

[55077] Chromosome 20 open reading frame 177 (C20orf177, Accession XP_290955.1) is another GAM7957 target gene, herein designated TARGET GENE. C20orf177 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf177 BINDING SITE, designated SEQ ID:18683, to the nucleotide

sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55078] Another function of GAM7957 is therefore inhibition of Chromosome 20 open reading frame 177 (C20orf177, Accession XP_290955.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf177.

[55079] Chromosome 20 open reading frame 29 (C20orf29, Accession NP_060817.1) is another GAM7957 target gene, herein designated TARGET GENE. C20orf29 BINDING SITE1 and C20orf29 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C20orf29, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf29 BINDING SITE1 and C20orf29 BINDING SITE2, designated SEQ ID:17737 and SEQ ID:19584 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55080] Another function of GAM7957 is therefore inhibition of Chromosome 20 open reading frame 29 (C20orf29, Accession NP_060817.1) . Accordingly, utilities of GAM7957

include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf29.

[55081] Chromosome 21 open reading frame 108 (C21orf108, Accession XP_114191.2) is another GAM7957 target gene, herein designated TARGET GENE. C21orf108 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C21orf108, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf108 BINDING SITE, designated SEQ ID:5823, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55082] Another function of GAM7957 is therefore inhibition of Chromosome 21 open reading frame 108 (C21orf108, Accession XP_114191.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf108.

[55083] Chromosome 21 open reading frame 62 (C21orf62, Accession NP_062542.1) is another GAM7957 target gene, herein designated TARGET GENE. C21orf62 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C21orf62, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf62 BINDING SITE, designated SEQ ID:8800, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55084] Another function of GAM7957 is therefore inhibition of Chromosome 21 open reading frame 62 (C21orf62, Accession NP_062542.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf62.

[55085] Chromosome 21 open reading frame 97 (C21orf97, Accession NP_068760.1) is another GAM7957 target gene, herein designated TARGET GENE. C21orf97 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C21orf97, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf97 BINDING SITE, designated SEQ ID:14711, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55086] Another function of GAM7957 is therefore inhibition of

Chromosome 21 open reading frame 97 (C21orf97, Accession NP_068760.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf97.

[55087] Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) is another GAM7957 target gene, herein designated TARGET GENE. C22orf19 BINDING SITE1 through C22orf19 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by C22orf19, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C22orf19 BINDING SITE1 through C22orf19 BINDING SITE3, designated SEQ ID:4658, SEQ ID:9519 and SEQ ID:15217 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55088] Another function of GAM7957 is therefore inhibition of Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C22orf19.

[55089] Chromosome 22 open reading frame 20 (C22orf20, Ac-

cession NP_079501.2) is another GAM7957 target gene, herein designated TARGET GENE. C22orf20 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C22orf20, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C22orf20 BINDING SITE, designated SEQ ID:18684, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55090] Another function of GAM7957 is therefore inhibition of Chromosome 22 open reading frame 20 (C22orf20, Accession NP_079501.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C22orf20.

[55091] C6orf149 (Accession NP_065141.2) is another GAM7957 target gene, herein designated TARGET GENE. C6orf149 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf149 BINDING SITE, designated SEQ ID:1454, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55092] Another function of GAM7957 is therefore inhibition of C6orf149 (Accession NP_065141.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf149.

[55093] C6orf150 (Accession NP_612450.1) is another GAM7957 target gene, herein designated TARGET GENE. C6orf150 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf150, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf150 BINDING SITE, designated SEQ ID:14568, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55094] Another function of GAM7957 is therefore inhibition of C6orf150 (Accession NP_612450.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf150.

[55095] C6orf166 (Accession NP_060534.1) is another GAM7957

target gene, herein designated TARGET GENE. C6orf166 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C6orf166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf166 BINDING SITE, designated SEQ ID:10236, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55096] Another function of GAM7957 is therefore inhibition of C6orf166 (Accession NP_060534.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf166.

[55097] Chromosome 6 open reading frame 29 (C6orf29, Accession NP_116183.1) is another GAM7957 target gene, herein designated TARGET GENE. C6orf29 BINDING SITE1 and C6orf29 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by C6orf29, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf29 BINDING SITE1 and

C6orf29 BINDING SITE2, designated SEQ ID:10438 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55098] Another function of GAM7957 is therefore inhibition of Chromosome 6 open reading frame 29 (C6orf29, Accession NP_116183.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf29.

[55099] C6orf5 (Accession NP_056339.2) is another GAM7957 target gene, herein designated TARGET GENE. C6orf5 BINDING SITE1 through C6orf5 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by C6orf5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf5 BINDING SITE1 through C6orf5 BINDING SITE3, designated SEQ ID:1492, SEQ ID:10438 and SEQ ID:2576 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55100] Another function of GAM7957 is therefore inhibition of C6orf5 (Accession NP_056339.2) . Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf5.

[55101] C6orf57 (Accession NP_660310.1) is another GAM7957 target gene, herein designated TARGET GENE. C6orf57 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf57, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf57 BINDING SITE, designated SEQ ID:17417, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55102] Another function of GAM7957 is therefore inhibition of C6orf57 (Accession NP_660310.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf57.

[55103] C6orf96 (Accession NP_060379.1) is another GAM7957 target gene, herein designated TARGET GENE. C6orf96 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf96, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of C6orf96 BINDING SITE, designated SEQ ID:15978, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55104] Another function of GAM7957 is therefore inhibition of C6orf96 (Accession NP_060379.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf96.

[55105] Chromosome 7 open reading frame 3 (C7orf3, Accession XP_049384.6) is another GAM7957 target gene, herein designated TARGET GENE. C7orf3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C7orf3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C7orf3 BINDING SITE, designated SEQ ID:11428, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55106] Another function of GAM7957 is therefore inhibition of Chromosome 7 open reading frame 3 (C7orf3, Accession XP_049384.6) . Accordingly, utilities of GAM7957 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with C7orf3.

[55107] Chromosome 8 open reading frame 17 (C8orf17, Accession NP_064622.1) is another GAM7957 target gene, herein designated TARGET GENE. C8orf17 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C8orf17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C8orf17 BINDING SITE, designated SEQ ID:19452, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55108] Another function of GAM7957 is therefore inhibition of Chromosome 8 open reading frame 17 (C8orf17, Accession NP_064622.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf17.

[55109] Chromosome 9 open reading frame 5 (C9orf5, Accession NP_114401.1) is another GAM7957 target gene, herein designated TARGET GENE. C9orf5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C9orf5, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf5 BINDING SITE, designated SEQ ID:2784, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55110] Another function of GAM7957 is therefore inhibition of Chromosome 9 open reading frame 5 (C9orf5, Accession NP_114401.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf5.

[55111] CAB56184 (Accession NP_115909.1) is another GAM7957 target gene, herein designated TARGET GENE. CAB56184 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CAB56184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAB56184 BINDING SITE, designated SEQ ID:18474, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55112] Another function of GAM7957 is therefore inhibition of CAB56184 (Accession NP_115909.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAB56184.

[55113] Calcium channel, voltage-dependent, gamma subunit 1 (CACNG1, Accession NP_000718.1) is another GAM7957 target gene, herein designated TARGET GENE. CACNG1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CACNG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNG1 BINDING SITE, designated SEQ ID:7002, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55114] Another function of GAM7957 is therefore inhibition of Calcium channel, voltage-dependent, gamma subunit 1 (CACNG1, Accession NP_000718.1), a gene which plays a role in excitation-contraction coupling. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNG1.

[55115] The function of CACNG1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM40.2.CAM-KIIN (Accession NP_150284.1) is another GAM7957 target gene, herein designated TARGET GENE. CAM-KIIN BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CAM-KIIN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAM-KIIN BINDING SITE, designated SEQ ID:10376, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55116] Another function of GAM7957 is therefore inhibition of CAM-KIIN (Accession NP_150284.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAM-KIIN.

[55117] Calcium/calmodulin-dependent protein kinase kinase 1, alpha (CAMKK1, Accession NP_115670.1) is another GAM7957 target gene, herein designated TARGET GENE. CAMKK1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CAMKK1, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK1 BINDING SITE, designated SEQ ID:8891, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55118] Another function of GAM7957 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 1, alpha (CAMKK1, Accession NP_115670.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK1.

[55119] Calcium/calmodulin-dependent protein kinase kinase 1, alpha (CAMKK1, Accession NP_757343.1) is another GAM7957 target gene, herein designated TARGET GENE. CAMKK1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CAMKK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK1 BINDING SITE, designated SEQ ID:8891, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55120] Another function of GAM7957 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 1, alpha (CAMKK1, Accession NP_757343.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK1.

[55121] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_006540.3) is another GAM7957 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CAMKK2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2, designated SEQ ID:6443 and SEQ ID:6443 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55122] Another function of GAM7957 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_006540.3) . Accordingly,

utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[55123] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757363.1) is another GAM7957 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CAMKK2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2, designated SEQ ID:6443 and SEQ ID:6443 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55124] Another function of GAM7957 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757363.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[55125] Calcium/calmodulin-dependent protein kinase kinase 2,

beta (CAMKK2, Accession NP_757365.1) is another GAM7957 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CAMKK2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2, designated SEQ ID:6443 and SEQ ID:9311 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55126] Another function of GAM7957 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757365.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[55127] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757364.1) is another GAM7957 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2 are target binding sites found in untranslated regions of mul-

multiple transcripts of mRNA encoded by CAMKK2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE1 and CAMKK2 BINDING SITE2, designated SEQ ID:6443 and SEQ ID:16561 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55128] Another function of GAM7957 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757364.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[55129] Calpain, small subunit 1 (CAPNS1, Accession NP_001740.1) is another GAM7957 target gene, herein designated TARGET GENE. CAPNS1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CAPNS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAPNS1 BINDING SITE, designated SEQ ID:16623, to the nucleotide se-

quence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55130] Another function of GAM7957 is therefore inhibition of Calpain, small subunit 1 (CAPNS1, Accession NP_001740.1), a gene which calcium- regulated non-lysosomal thiol- protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal transduction. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPNS1.

[55131] The function of CAPNS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM496.1.Carbohydrate kinase-like (CARKL, Accession NP_037408.1) is another GAM7957 target gene, herein designated TARGET GENE. CARKL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CARKL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARKL BINDING SITE, designated SEQ ID:13435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ

ID:297.

[55132] Another function of GAM7957 is therefore inhibition of Carbohydrate kinase-like (CARKL, Accession NP_037408.1), a gene which is a putative carbohydrate kinase and may be a modifier for the cystinosis phenotype. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARKL.

[55133] The function of CARKL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1. Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_001221.1) is another GAM7957 target gene, herein designated TARGET GENE. CASP10 BINDING SITE1 and CASP10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP10 BINDING SITE1 and CASP10 BINDING SITE2, designated SEQ ID:1694 and SEQ ID:1694 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55134] Another function of GAM7957 is therefore inhibition of Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_001221.1), a gene which is one aspartate-specific cysteine protease and important in death receptor signaling or other cellular processes. and therefore may be associated with Gastric cancers . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Gastric cancers ., and of other diseases and clinical conditions associated with CASP10.

[55135] The function of CASP10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_116759.1) is another GAM7957 target gene, herein designated TARGET GENE. CASP10 BINDING SITE1 and CASP10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP10 BINDING SITE1 and CASP10 BINDING SITE2, design-

nated SEQ ID:17083 and SEQ ID:17083 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55136] Another function of GAM7957 is therefore inhibition of Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_116759.1), a gene which is one aspartate-specific cysteine protease and important in death receptor signaling or other cellular processes. and therefore may be associated with Gastric cancers . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Gastric cancers ., and of other diseases and clinical conditions associated with CASP10.

[55137] The function of CASP10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_116758.1) is another GAM7957 target gene, herein designated TARGET GENE. CASP10 BINDING SITE1 and CASP10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of CASP10 BINDING SITE1 and CASP10 BINDING SITE2, designated SEQ ID:1694 and SEQ ID:17083 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55138] Another function of GAM7957 is therefore inhibition of Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_116758.1), a gene which is one aspartate-specific cysteine protease and important in death receptor signaling or other cellular processes. and therefore may be associated with Gastric cancers . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Gastric cancers ., and of other diseases and clinical conditions associated with CASP10.

[55139] The function of CASP10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1) is another GAM7957 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:7316, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55140] Another function of GAM7957 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor-induced apoptosis. and therefore may be associated with Huntington-related neurodegenerative diseases. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Huntington-related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[55141] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203519.1) is another GAM7957 target gene, herein designated TARGET GENE.

CASP8 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:7316, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55142] Another function of GAM7957 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203519.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor-induced apoptosis. and therefore may be associated with Huntington-related neurodegenerative diseases. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Huntington-related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[55143] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM72.1.CBCIP2 (Accession NP_116220.1) is another GAM7957 target gene, herein designated TARGET GENE. CBCIP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CBCIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CBCIP2 BINDING SITE, designated SEQ ID:614, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55144] Another function of GAM7957 is therefore inhibition of CBCIP2 (Accession NP_116220.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBCIP2.

[55145] Chemokine (c-c motif) ligand 5 (CCL5, Accession NP_002976.2) is another GAM7957 target gene, herein designated TARGET GENE. CCL5 BINDING SITE1 through CCL5 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by CCL5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL5 BINDING SITE1 through CCL5 BINDING SITE3, design-

nated SEQ ID:3753, SEQ ID:15343 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55146] Another function of GAM7957 is therefore inhibition of Chemokine (c-c motif) ligand 5 (CCL5, Accession NP_002976.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL5.

[55147] CCNL2 (Accession NP_112199.1) is another GAM7957 target gene, herein designated TARGET GENE. CCNL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CCNL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNL2 BINDING SITE, designated SEQ ID:2911, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55148] Another function of GAM7957 is therefore inhibition of CCNL2 (Accession NP_112199.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNL2.

[55149] Chemokine (c-c motif) receptor 6 (CCR6, Accession

NP_004358.1) is another GAM7957 target gene, herein designated TARGET GENE. CCR6 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR6 BINDING SITE, designated SEQ ID:12792, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55150] Another function of GAM7957 is therefore inhibition of Chemokine (c-c motif) receptor 6 (CCR6, Accession NP_004358.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR6.

[55151] Chemokine (c-c motif) receptor 6 (CCR6, Accession NP_113597.1) is another GAM7957 target gene, herein designated TARGET GENE. CCR6 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR6

BINDING SITE, designated SEQ ID:12792, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55152] Another function of GAM7957 is therefore inhibition of Chemokine (c-c motif) receptor 6 (CCR6, Accession NP_113597.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR6.

[55153] Cd19 antigen (CD19, Accession NP_001761.2) is another GAM7957 target gene, herein designated TARGET GENE. CD19 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CD19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD19 BINDING SITE, designated SEQ ID:8851, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55154] Another function of GAM7957 is therefore inhibition of Cd19 antigen (CD19, Accession NP_001761.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD19.

[55155] Cd28 antigen (tp44) (CD28, Accession NP_006130.1) is another GAM7957 target gene, herein designated TARGET GENE. CD28 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CD28, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD28 BINDING SITE, designated SEQ ID:13593, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55156] Another function of GAM7957 is therefore inhibition of Cd28 antigen (tp44) (CD28, Accession NP_006130.1), a gene which possibly involved in t- cell activation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD28.

[55157] The function of CD28 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1. Cd59 antigen p18-20 (antigen identified by monoclonal antibodies 16.3a5, ej16, ej30, el32 and g344) (CD59, Accession NP_000602.1) is another GAM7957 target gene, herein designated TARGET GENE. CD59 BINDING

SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CD59, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD59 BINDING SITE, designated SEQ ID:6036, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55158] Another function of GAM7957 is therefore inhibition of Cd59 antigen p18-20 (antigen identified by monoclonal antibodies 16.3a5, ej16, ej30, el32 and g344) (CD59, Accession NP_000602.1), a gene which restricts lysis of human erythrocytes and leukocytes by homologous complement. and therefore may be associated with Cd59 deficiency (hemolytic anemia and thrombosis). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Cd59 deficiency (hemolytic anemia and thrombosis), and of other diseases and clinical conditions associated with CD59.

[55159] The function of CD59 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1.Cd68 antigen (CD68, Accession

NP_001242.1) is another GAM7957 target gene, herein designated TARGET GENE. CD68 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CD68, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD68 BINDING SITE, designated SEQ ID:17185, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55160] Another function of GAM7957 is therefore inhibition of Cd68 antigen (CD68, Accession NP_001242.1), a gene which is highly expressed by human monocytes and tissue macrophages. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD68.

[55161] The function of CD68 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Cd84 antigen (leukocyte antigen) (CD84, Accession NP_003865.1) is another GAM7957 target gene, herein designated TARGET GENE. CD84 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by CD84, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD84 BINDING SITE, designated SEQ ID:3814, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55162] Another function of GAM7957 is therefore inhibition of Cd84 antigen (leukocyte antigen) (CD84, Accession NP_003865.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD84.

[55163] Congenital dyserythropoietic anemia, type i (CDAN1, Accession XP_085300.3) is another GAM7957 target gene, herein designated TARGET GENE. CDAN1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CDAN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDAN1 BINDING SITE, designated SEQ ID:6264, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55164] Another function of GAM7957 is therefore inhibition of Congenital dyserythropoietic anemia, type i (CDAN1, Accession XP_085300.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDAN1.

[55165] Cdc42 effector protein (rho gtpase binding) 3 (CDC42EP3, Accession NP_006440.2) is another GAM7957 target gene, herein designated TARGET GENE. CDC42EP3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CDC42EP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC42EP3 BINDING SITE, designated SEQ ID:8291, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55166] Another function of GAM7957 is therefore inhibition of Cdc42 effector protein (rho gtpase binding) 3 (CDC42EP3, Accession NP_006440.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC42EP3.

[55167] Cell division cycle associated 4 (CDCA4, Accession

NP_060425.2) is another GAM7957 target gene, herein designated TARGET GENE. CDCA4 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CDCA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDCA4 BINDING SITE, designated SEQ ID:6066, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55168] Another function of GAM7957 is therefore inhibition of Cell division cycle associated 4 (CDCA4, Accession NP_060425.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDCA4.

[55169] Cadherin 6, type 2, k-cadherin (fetal kidney) (CDH6, Accession NP_004923.1) is another GAM7957 target gene, herein designated TARGET GENE. CDH6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CDH6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH6 BINDING SITE,

designated SEQ ID:19638, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

- [55170] Another function of GAM7957 is therefore inhibition of Cadherin 6, type 2, k-cadherin (fetal kidney) (CDH6, Accession NP_004923.1), a gene which is a calcium dependent cell adhesion protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH6.
- [55171] The function of CDH6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.2.CDT1 (Accession NP_112190.1) is another GAM7957 target gene, herein designated TARGET GENE. CDT1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CDT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDT1 BINDING SITE, designated SEQ ID:5446, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

- [55172] Another function of GAM7957 is therefore inhibition of

CDT1 (Accession NP_112190.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDT1.

[55173] Carcinoembryonic antigen-related cell adhesion molecule 5 (CEACAM5, Accession NP_004354.1) is another GAM7957 target gene, herein designated TARGET GENE. CEACAM5 BINDING SITE1 and CEACAM5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CEACAM5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CEACAM5 BINDING SITE1 and CEACAM5 BINDING SITE2, designated SEQ ID:3562 and SEQ ID:14555 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55174] Another function of GAM7957 is therefore inhibition of Carcinoembryonic antigen-related cell adhesion molecule 5 (CEACAM5, Accession NP_004354.1), a gene which is a complex immunoreactive glycoprotein and therefore may be associated with Liver metastasis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Liver metastasis, and of other diseases and clinical

conditions associated with CEACAM5.

[55175] The function of CEACAM5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Centaurin, gamma 1 (CENTG1, Accession NP_055585.1) is another GAM7957 target gene, herein designated TARGET GENE. CENTG1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CENTG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENTG1 BINDING SITE, designated SEQ ID:15422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55176] Another function of GAM7957 is therefore inhibition of Centaurin, gamma 1 (CENTG1, Accession NP_055585.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENTG1.

[55177] Ceramide kinase (CERK, Accession NP_073603.2) is another GAM7957 target gene, herein designated TARGET GENE. CERK BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by CERK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CERK BINDING SITE, designated SEQ ID:1617, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55178] Another function of GAM7957 is therefore inhibition of Ceramide kinase (CERK, Accession NP_073603.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CERK.

[55179] CG012 (Accession XP_096710.1) is another GAM7957 target gene, herein designated TARGET GENE. CG012 BINDING SITE1 through CG012 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by CG012, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CG012 BINDING SITE1 through CG012 BINDING SITE4, designated SEQ ID:5067, SEQ ID:15105, SEQ ID:11098 and SEQ ID:10655 respectively, to the nucleotide sequence of GAM7957 RNA, herein des-

ignated GAM RNA, also designated SEQ ID:297.

[55180] Another function of GAM7957 is therefore inhibition of CG012 (Accession XP_096710.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CG012.

[55181] CGI-119 (Accession NP_057140.1) is another GAM7957 target gene, herein designated TARGET GENE. CGI-119 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CGI-119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-119 BINDING SITE, designated SEQ ID:7927, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55182] Another function of GAM7957 is therefore inhibition of CGI-119 (Accession NP_057140.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-119.

[55183] CGI-57 (Accession NP_056495.2) is another GAM7957 target gene, herein designated TARGET GENE. CGI-57 BINDING SITE is a target binding site found in the 5' un-

translated region of mRNA encoded by CGI-57, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-57 BINDING SITE, designated SEQ ID:4207, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55184] Another function of GAM7957 is therefore inhibition of CGI-57 (Accession NP_056495.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-57.

[55185] Chrna7 (cholinergic receptor, nicotinic, alpha polypeptide 7, exons 5-10) and fam7a (family with sequence similarity 7a, exons a-e) fusion (CHRFAM7A, Accession NP_683709.1) is another GAM7957 target gene, herein designated TARGET GENE. CHRFAM7A BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CHRFAM7A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRFAM7A BINDING SITE, designated SEQ ID:19583, to the nucleotide sequence of GAM7957 RNA, herein design-

nated GAM RNA, also designated SEQ ID:297.

[55186] Another function of GAM7957 is therefore inhibition of Chrna7 (cholinergic receptor, nicotinic, alpha polypeptide 7, exons 5–10) and fam7a (family with sequence similarity 7a, exons a–e) fusion (CHRFAM7A, Accession NP_683709.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRFAM7A.

[55187] CKLiK (Accession NP_705718.1) is another GAM7957 target gene, herein designated TARGET GENE. CKLiK BINDING SITE1 and CKLiK BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CKLiK, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CKLiK BINDING SITE1 and CKLiK BINDING SITE2, designated SEQ ID:1797 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55188] Another function of GAM7957 is therefore inhibition of CKLiK (Accession NP_705718.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with CKLIK.

[55189] Chloride channel 7 (CLCN7, Accession NP_001278.1) is another GAM7957 target gene, herein designated TARGET GENE. CLCN7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CLCN7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN7 BINDING SITE, designated SEQ ID:11937, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55190] Another function of GAM7957 is therefore inhibition of Chloride channel 7 (CLCN7, Accession NP_001278.1), a gene which is voltage-gated chloride channel. and therefore is associated with Osteopetrosis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Osteopetrosis., and of other diseases and clinical conditions associated with CLCN7.

[55191] The function of CLCN7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM483.1.Claudin 15 (CLDN15, Accession

NP_055158.1) is another GAM7957 target gene, herein designated TARGET GENE. CLDN15 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CLDN15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN15 BINDING SITE, designated SEQ ID:4226, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55192] Another function of GAM7957 is therefore inhibition of Claudin 15 (CLDN15, Accession NP_055158.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLDN15.

[55193] Claudin 15 (CLDN15, Accession NP_612438.1) is another GAM7957 target gene, herein designated TARGET GENE. CLDN15 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CLDN15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN15 BINDING SITE, design-

nated SEQ ID:4226, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55194] Another function of GAM7957 is therefore inhibition of Claudin 15 (CLDN15, Accession NP_612438.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLDN15.

[55195] Claudin 19 (CLDN19, Accession NP_683763.1) is another GAM7957 target gene, herein designated TARGET GENE. CLDN19 BINDING SITE1 and CLDN19 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CLDN19, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN19 BINDING SITE1 and CLDN19 BINDING SITE2, designated SEQ ID:10568 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55196] Another function of GAM7957 is therefore inhibition of Claudin 19 (CLDN19, Accession NP_683763.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with CLDN19.

[55197] Ceroid–lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) is another GAM7957 target gene, herein designated TARGET GENE. CLN8 BINDING SITE1 and CLN8 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CLN8, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLN8 BINDING SITE1 and CLN8 BINDING SITE2, designated SEQ ID:18690 and SEQ ID:8497 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55198] Another function of GAM7957 is therefore inhibition of Ceroid–lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLN8.

[55199] Claspin homolog (xenopus laevis) (CLSPN, Accession NP_071394.2) is another GAM7957 target gene, herein

designated TARGET GENE. CLSPN BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CLSPN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLSPN BINDING SITE, designated SEQ ID:15905, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55200] Another function of GAM7957 is therefore inhibition of Claspin homolog (*xenopus laevis*) (CLSPN, Accession NP_071394.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLSPN.

[55201] Cyclin m1 (CNNM1, Accession NP_065081.1) is another GAM7957 target gene, herein designated TARGET GENE. CNNM1 BINDING SITE1 and CNNM1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CNNM1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNNM1 BINDING SITE1 and CNNM1 BINDING SITE2, designated SEQ ID:5830 and

SEQ ID:10439 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55202] Another function of GAM7957 is therefore inhibition of Cyclin m1 (CNNM1, Accession NP_065081.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNNM1.

[55203] COE2 (Accession XP_034639.1) is another GAM7957 target gene, herein designated TARGET GENE. COE2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by COE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COE2 BINDING SITE, designated SEQ ID:13624, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55204] Another function of GAM7957 is therefore inhibition of COE2 (Accession XP_034639.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COE2.

[55205] Cop9 constitutive photomorphogenic homolog subunit 7b

(arabidopsis) (COPS7B, Accession NP_073567.1) is another GAM7957 target gene, herein designated TARGET GENE. COPS7B BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by COPS7B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COPS7B BINDING SITE, designated SEQ ID:5797, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55206] Another function of GAM7957 is therefore inhibition of Cop9 constitutive photomorphogenic homolog subunit 7b (arabidopsis) (COPS7B, Accession NP_073567.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COPS7B.

[55207] Carboxypeptidase m (CPM, Accession NP_001865.1) is another GAM7957 target gene, herein designated TARGET GENE. CPM BINDING SITE1 and CPM BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CPM, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of CPM BINDING SITE1 and CPM BINDING SITE2, designated SEQ ID:5015 and SEQ ID:14439 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55208] Another function of GAM7957 is therefore inhibition of Carboxypeptidase m (CPM, Accession NP_001865.1), a gene which specifically removes COOH- terminal basic amino acids (arginine or lysine). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPM.

[55209] The function of CPM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.CPR2 (Accession NP_112162.1) is another GAM7957 target gene, herein designated TARGET GENE. CPR2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CPR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPR2 BINDING SITE, designated SEQ ID:3265, to the nucleotide sequence of GAM7957

RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55210] Another function of GAM7957 is therefore inhibition of CPR2 (Accession NP_112162.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPR2.

[55211] Carnitine palmitoyltransferase ii (CPT2, Accession NP_000089.1) is another GAM7957 target gene, herein designated TARGET GENE. CPT2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CPT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPT2 BINDING SITE, designated SEQ ID:15223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55212] Another function of GAM7957 is therefore inhibition of Carnitine palmitoyltransferase ii (CPT2, Accession NP_000089.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPT2.

[55213] CRACC (Accession NP_067004.3) is another GAM7957

target gene, herein designated TARGET GENE. CRACC BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRACC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRACC BINDING SITE, designated SEQ ID:9770, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55214] Another function of GAM7957 is therefore inhibition of CRACC (Accession NP_067004.3), a gene which may participate in adhesion reactions between T lymphocytes and accessory cells. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRACC.

[55215] The function of CRACC and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Crm, cramped-like (drosophila) (CRAMP1L, Accession XP_034570.4) is another GAM7957 target gene, herein designated TARGET GENE. CRAMP1L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRAMP1L, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRAMP1L BINDING SITE, designated SEQ ID:7133, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55216] Another function of GAM7957 is therefore inhibition of Crm, cramped-like (drosophila) (CRAMP1L, Accession XP_034570.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRAMP1L.

[55217] Camp responsive element binding protein 1 (CREB1, Accession NP_604391.1) is another GAM7957 target gene, herein designated TARGET GENE. CREB1 BINDING SITE1 and CREB1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CREB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CREB1 BINDING SITE1 and CREB1 BINDING SITE2, designated SEQ ID:5925 and SEQ ID:14278 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ

ID:297.

[55218] Another function of GAM7957 is therefore inhibition of Camp responsive element binding protein 1 (CREB1, Accession NP_604391.1), a gene which regulates expression of cAMP- inducible genes. and therefore may be associated with Malignancy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Malignancy, and of other diseases and clinical conditions associated with CREB1.

[55219] The function of CREB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM260.1.Camp responsive element binding protein 1 (CREB1, Accession NP_004370.1) is another GAM7957 target gene, herein designated TARGET GENE. CREB1 BINDING SITE1 and CREB1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CREB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CREB1 BINDING SITE1 and CREB1 BINDING SITE2, designated SEQ ID:5925 and SEQ ID:14278 respectively, to the nucleotide

sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55220] Another function of GAM7957 is therefore inhibition of Camp responsive element binding protein 1 (CREB1, Accession NP_004370.1), a gene which regulates expression of cAMP- inducible genes. and therefore may be associated with Malignancy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Malignancy, and of other diseases and clinical conditions associated with CREB1.

[55221] The function of CREB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM260.1.Carnitine o-octanoyltransferase (CROT, Accession NP_066974.2) is another GAM7957 target gene, herein designated TARGET GENE. CROT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CROT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CROT BINDING SITE, designated SEQ ID:13250, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55222] Another function of GAM7957 is therefore inhibition of Carnitine o-octanoyltransferase (CROT, Accession NP_066974.2), a gene which CROT plays a crucial role in the beta-oxidation of branched-chain fatty acids including pristanic acid. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CROT.

[55223] The function of CROT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. CRTAM (Accession NP_062550.1) is another GAM7957 target gene, herein designated TARGET GENE. CRTAM BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRTAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRTAM BINDING SITE, designated SEQ ID:2833, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55224] Another function of GAM7957 is therefore inhibition of CRTAM (Accession NP_062550.1). Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRTAM.

[55225] Cryptochrome 2 (photolyase-like) (CRY2, Accession NP_066940.1) is another GAM7957 target gene, herein designated TARGET GENE. CRY2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRY2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRY2 BINDING SITE, designated SEQ ID:17056, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55226] Another function of GAM7957 is therefore inhibition of Cryptochrome 2 (photolyase-like) (CRY2, Accession NP_066940.1), a gene which has a role in circadian photoreception in mammals. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRY2.

[55227] The function of CRY2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Crystallin, zeta (quinone reductase)-like 1

(CRYZL1, Accession NP_660354.1) is another GAM7957 target gene, herein designated TARGET GENE. CRYZL1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CRYZL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRYZL1 BINDING SITE, designated SEQ ID:5251, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55228] Another function of GAM7957 is therefore inhibition of Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_660354.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRYZL1.

[55229] Cysteine sulfinic acid decarboxylase (CSAD, Accession NP_057073.2) is another GAM7957 target gene, herein designated TARGET GENE. CSAD BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CSAD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of CSAD BINDING SITE, designated SEQ ID:6679, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55230] Another function of GAM7957 is therefore inhibition of Cysteine sulfinic acid decarboxylase (CSAD, Accession NP_057073.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSAD.

[55231] CTMP (Accession NP_444283.1) is another GAM7957 target gene, herein designated TARGET GENE. CTMP BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CTMP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTMP BINDING SITE, designated SEQ ID:16622, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55232] Another function of GAM7957 is therefore inhibition of CTMP (Accession NP_444283.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTMP.

[55233] CTMP (Accession NP_789823.1) is another GAM7957 target gene, herein designated TARGET GENE. CTMP BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CTMP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTMP BINDING SITE, designated SEQ ID:16622, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55234] Another function of GAM7957 is therefore inhibition of CTMP (Accession NP_789823.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTMP.

[55235] Cathepsin s (CTSS, Accession NP_004070.3) is another GAM7957 target gene, herein designated TARGET GENE. CTSS BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CTSS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSS BINDING SITE, designated SEQ ID:1951, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55236] Another function of GAM7957 is therefore inhibition of Cathepsin s (CTSS, Accession NP_004070.3), a gene which is a lysosomal cysteine (thiol) protease that cleaves elastin. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSS.

[55237] The function of CTSS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Cubilin (intrinsic factor-cobalamin receptor) (CUBN, Accession NP_001072.1) is another GAM7957 target gene, herein designated TARGET GENE. CUBN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CUBN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CUBN BINDING SITE, designated SEQ ID:13063, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55238] Another function of GAM7957 is therefore inhibition of Cubilin (intrinsic factor-cobalamin receptor) (CUBN, Ac-

cession NP_001072.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CUBN.

[55239] CX40.1 (Accession NP_699199.1) is another GAM7957 target gene, herein designated TARGET GENE. CX40.1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CX40.1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CX40.1 BINDING SITE, designated SEQ ID:4730, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55240] Another function of GAM7957 is therefore inhibition of CX40.1 (Accession NP_699199.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CX40.1.

[55241] Chromosome x open reading frame 12 (CXorf12, Accession NP_003483.1) is another GAM7957 target gene, herein designated TARGET GENE. CXorf12 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CXorf12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXorf12 BINDING SITE, designated SEQ ID:9618, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55242] Another function of GAM7957 is therefore inhibition of Chromosome x open reading frame 12 (CXorf12, Accession NP_003483.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXorf12.

[55243] CXYorf1 (Accession XP_088704.2) is another GAM7957 target gene, herein designated TARGET GENE. CXYorf1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CXYorf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXYorf1 BINDING SITE, designated SEQ ID:8398, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55244] Another function of GAM7957 is therefore inhibition of CXYorf1 (Accession XP_088704.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with CXY-orf1.

[55245] Cytochrome b-561 (CYB561, Accession NP_001906.2) is another GAM7957 target gene, herein designated TARGET GENE. CYB561 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CYB561, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYB561 BINDING SITE, designated SEQ ID:7117, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55246] Another function of GAM7957 is therefore inhibition of Cytochrome b-561 (CYB561, Accession NP_001906.2), a gene which is a secretory vesicle-specific electron transport protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYB561.

[55247] The function of CYB561 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.CYCS (Accession NP_061820.1) is another

GAM7957 target gene, herein designated TARGET GENE. CYCS BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CYCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYCS BINDING SITE, designated SEQ ID:18947, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55248] Another function of GAM7957 is therefore inhibition of CYCS (Accession NP_061820.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYCS.

[55249] Chromosome y open reading frame 14 (CYorf14, Accession NP_061012.1) is another GAM7957 target gene, herein designated TARGET GENE. CYorf14 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CYorf14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYorf14 BINDING SITE, designated SEQ ID:14752, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA,

also designated SEQ ID:297.

[55250] Another function of GAM7957 is therefore inhibition of Chromosome y open reading frame 14 (CYorf14, Accession NP_061012.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYorf14.

[55251] Cytochrome p450, subfamily ivf, polypeptide 3 (leukotriene b4 omega hydroxylase) (CYP4F3, Accession NP_000887.1) is another GAM7957 target gene, herein designated TARGET GENE. CYP4F3 BINDING SITE1 and CYP4F3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYP4F3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP4F3 BINDING SITE1 and CYP4F3 BINDING SITE2, designated SEQ ID:18962 and SEQ ID:16247 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55252] Another function of GAM7957 is therefore inhibition of Cytochrome p450, subfamily ivf, polypeptide 3 (leukotriene b4 omega hydroxylase) (CYP4F3, Accession NP_000887.1), a gene which converts leukotriene B4 into

the less active 20- hydroxy- leukotriene B4. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP4F3.

[55253] The function of CYP4F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1.D21S2056E (Accession NP_003674.1) is another GAM7957 target gene, herein designated TARGET GENE. D21S2056E BINDING SITE1 and D21S2056E BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by D21S2056E, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of D21S2056E BINDING SITE1 and D21S2056E BINDING SITE2, designated SEQ ID:13060 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55254] Another function of GAM7957 is therefore inhibition of D21S2056E (Accession NP_003674.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

D21S2056E.

[55255] Dual adaptor of phosphotyrosine and 3-phosphoinositides (DAPP1, Accession NP_055210.1) is another GAM7957 target gene, herein designated TARGET GENE. DAPP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DAPP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DAPP1 BINDING SITE, designated SEQ ID:2773, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55256] Another function of GAM7957 is therefore inhibition of Dual adaptor of phosphotyrosine and 3-phosphoinositides (DAPP1, Accession NP_055210.1), a gene which regulates the ras- cyclic amp pathway. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DAPP1.

[55257] The function of DAPP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Deleted in bladder cancer chromosome re-

gion candidate 1 (DBCCR1, Accession NP_055433.1) is another GAM7957 target gene, herein designated TARGET GENE. DBCCR1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DBCCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DBCCR1 BINDING SITE, designated SEQ ID:2272, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55258] Another function of GAM7957 is therefore inhibition of Deleted in bladder cancer chromosome region candidate 1 (DBCCR1, Accession NP_055433.1), a gene which might be a target for hypermethylation . and therefore may be associated with Transitional cell carcinoma of the bladder. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Transitional cell carcinoma of the bladder, and of other diseases and clinical conditions associated with DBCCR1.

[55259] The function of DBCCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM401.1.Dihydrolipoamide branched chain transacylase (e2 component of branched chain keto acid dehydrogenase complex; maple syrup urine disease) (DBT, Accession NP_001909.1) is another GAM7957 target gene, herein designated TARGET GENE. DBT BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DBT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DBT BINDING SITE, designated SEQ ID:9770, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55260] Another function of GAM7957 is therefore inhibition of Dihydrolipoamide branched chain transacylase (e2 component of branched chain keto acid dehydrogenase complex; maple syrup urine disease) (DBT, Accession NP_001909.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DBT.

[55261] Dna cross-link repair 1c (ps02 homolog, *s. cerevisiae*) (DCLRE1C, Accession NP_071932.1) is another GAM7957 target gene, herein designated TARGET GENE. DCLRE1C

BINDING SITE1 and DCLRE1C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DCLRE1C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCLRE1C BINDING SITE1 and DCLRE1C BINDING SITE2, designated SEQ ID:9270 and SEQ ID:9533 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55262] Another function of GAM7957 is therefore inhibition of Dna cross-link repair 1c (ps02 homolog, *s. cerevisiae*) (DCLRE1C, Accession NP_071932.1), a gene which intervenes in V(D)J recombination/DNA repair. and therefore may be associated with Severe combined immunodeficiency with sensitivity to ionizing radiation . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Severe combined immunodeficiency with sensitivity to ionizing radiation ., and of other diseases and clinical conditions associated with DCLRE1C.

[55263] The function of DCLRE1C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM72.1.Dolichyl–diphosphooligosaccharide–protein glycosyltransferase (DDOST, Accession NP_005207.2) is another GAM7957 target gene, herein designated TARGET GENE. DDOST BINDING SITE1 and DDOST BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DDOST, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDOST BINDING SITE1 and DDOST BINDING SITE2, designated SEQ ID:15593 and SEQ ID:17654 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55264] Another function of GAM7957 is therefore inhibition of Dolichyl–diphosphooligosaccharide–protein glycosyltransferase (DDOST, Accession NP_005207.2), a gene which transfers high– mannose oligosaccharides to nascent polypeptides. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDOST.

[55265] The function of DDOST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM347.2.Dead/h (asp-glu-ala-asp/his) box polypeptide 34 (DDX34, Accession NP_055496.1) is another GAM7957 target gene, herein designated TARGET GENE. DDX34 BINDING SITE1 and DDX34 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DDX34, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX34 BINDING SITE1 and DDX34 BINDING SITE2, designated SEQ ID:7047 and SEQ ID:2125 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55266] Another function of GAM7957 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 34 (DDX34, Accession NP_055496.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX34.

[55267] DDX51 (Accession NP_778236.1) is another GAM7957 target gene, herein designated TARGET GENE. DDX51 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DDX51, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX51 BINDING SITE, designated SEQ ID:17424, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55268] Another function of GAM7957 is therefore inhibition of DDX51 (Accession NP_778236.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX51.

[55269] Degenerative spermatocyte homolog, lipid desaturase (drosophila) (DEGS, Accession NP_659004.1) is another GAM7957 target gene, herein designated TARGET GENE. DEGS BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DEGS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DEGS BINDING SITE, designated SEQ ID:2834, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55270] Another function of GAM7957 is therefore inhibition of Degenerative spermatocyte homolog, lipid desaturase

(drosophila) (DEGS, Accession NP_659004.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEGS.

[55271] Degenerative spermatocyte homolog, lipid desaturase (drosophila) (DEGS, Accession NP_003667.1) is another GAM7957 target gene, herein designated TARGET GENE. DEGS BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DEGS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DEGS BINDING SITE, designated SEQ ID:2834, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55272] Another function of GAM7957 is therefore inhibition of Degenerative spermatocyte homolog, lipid desaturase (drosophila) (DEGS, Accession NP_003667.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEGS.

[55273] D component of complement (adipsin) (DF, Accession

NP_001919.1) is another GAM7957 target gene, herein designated TARGET GENE. DF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DF BINDING SITE, designated SEQ ID:8534, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55274] Another function of GAM7957 is therefore inhibition of D component of complement (adipsin) (DF, Accession NP_001919.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DF.

[55275] Dna fragmentation factor, 45kda, alpha polypeptide (DFFA, Accession NP_004392.1) is another GAM7957 target gene, herein designated TARGET GENE. DFFA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DFFA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DFFA BINDING SITE, designated SEQ ID:19036, to the nucleotide se-

quence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55276] Another function of GAM7957 is therefore inhibition of Dna fragmentation factor, 45kda, alpha polypeptide (DFFA, Accession NP_004392.1), a gene which is the substrate for caspase- 3 and triggers DNA fragmentation during apoptosis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DFFA.

[55277] The function of DFFA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2.Diacylglycerol kinase, iota (DGKI, Accession NP_004708.1) is another GAM7957 target gene, herein designated TARGET GENE. DGKI BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DGKI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGKI BINDING SITE, designated SEQ ID:13155, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55278] Another function of GAM7957 is therefore inhibition of Diacylglycerol kinase, *iota* (DGKI, Accession NP_004708.1), a gene which regulates the intracellular concentration of the second messenger diacylglycerol (DAG). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DGKI.

[55279] The function of DGKI and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.DIS3 (Accession NP_055768.2) is another GAM7957 target gene, herein designated TARGET GENE. DIS3 BINDING SITE1 and DIS3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DIS3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIS3 BINDING SITE1 and DIS3 BINDING SITE2, designated SEQ ID:17399 and SEQ ID:15204 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55280] Another function of GAM7957 is therefore inhibition of

DIS3 (Accession NP_055768.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIS3.

[55281] DJ122O8.2 (Accession NP_065199.1) is another GAM7957 target gene, herein designated TARGET GENE. DJ122O8.2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DJ122O8.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DJ122O8.2 BINDING SITE, designated SEQ ID:3814, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55282] Another function of GAM7957 is therefore inhibition of DJ122O8.2 (Accession NP_065199.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DJ122O8.2.

[55283] DKFZp313G1735 (Accession XP_087728.2) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp313G1735 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp313G1735, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp313G1735 BINDING SITE, designated SEQ ID:9281, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55284] Another function of GAM7957 is therefore inhibition of DKFZp313G1735 (Accession XP_087728.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp313G1735.

[55285] DKFZp313N0621 (Accession NP_776187.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp313N0621 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp313N0621, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp313N0621 BINDING SITE, designated SEQ ID:7349, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55286] Another function of GAM7957 is therefore inhibition of

DKFZp313N0621 (Accession NP_776187.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp313N0621.

[55287] DKFZP434A0131 (Accession NP_061864.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434A0131 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434A0131, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434A0131 BINDING SITE, designated SEQ ID:8751, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55288] Another function of GAM7957 is therefore inhibition of DKFZP434A0131 (Accession NP_061864.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434A0131.

[55289] DKFZP434B0335 (Accession XP_166485.3) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434B0335 BINDING SITE1 and DKFZP434B0335

BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZP434B0335, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B0335 BINDING SITE1 and DKFZP434B0335 BINDING SITE2, designated SEQ ID:4428 and SEQ ID:7885 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55290] Another function of GAM7957 is therefore inhibition of DKFZP434B0335 (Accession XP_166485.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B0335.

[55291] DKFZP434B103 (Accession NP_056459.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434B103 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZP434B103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B103 BINDING SITE,

designated SEQ ID:11706, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55292] Another function of GAM7957 is therefore inhibition of DKFZP434B103 (Accession NP_056459.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B103.

[55293] DKFZP434B168 (Accession NP_056249.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434B168 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434B168, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B168 BINDING SITE, designated SEQ ID:2483, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55294] Another function of GAM7957 is therefore inhibition of DKFZP434B168 (Accession NP_056249.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZP434B168.

[55295] DKFZP434C171 (Accession NP_056436.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434C171 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434C171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434C171 BINDING SITE, designated SEQ ID:17129, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55296] Another function of GAM7957 is therefore inhibition of DKFZP434C171 (Accession NP_056436.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434C171.

[55297] DKFZp434E0519 (Accession NP_115623.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp434E0519 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp434E0519, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434E0519 BINDING SITE, designated SEQ ID:6416, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55298] Another function of GAM7957 is therefore inhibition of DKFZp434E0519 (Accession NP_115623.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E0519.

[55299] DKFZp434E2220 (Accession NP_060082.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp434E2220 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp434E2220, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434E2220 BINDING SITE, designated SEQ ID:14786, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55300] Another function of GAM7957 is therefore inhibition of DKFZp434E2220 (Accession NP_060082.1) . Accordingly,

utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E2220.

[55301] DKFZP434F091 (Accession NP_056268.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434F091 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434F091, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434F091 BINDING SITE, designated SEQ ID:744, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55302] Another function of GAM7957 is therefore inhibition of DKFZP434F091 (Accession NP_056268.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F091.

[55303] DKFZp434H247 (Accession XP_290829.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp434H247 BINDING SITE1 and DKFZp434H247 BINDING SITE2 are target binding sites found in untranslated

regions of mRNA encoded by DKFZp434H247, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434H247 BINDING SITE1 and DKFZp434H247 BINDING SITE2, designated SEQ ID:17399 and SEQ ID:4428 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55304] Another function of GAM7957 is therefore inhibition of DKFZp434H247 (Accession XP_290829.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434H247.

[55305] DKFZP434I1735 (Accession XP_113763.3) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434I1735 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434I1735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434I1735 BINDING SITE, designated SEQ ID:3132, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55306] Another function of GAM7957 is therefore inhibition of DKFZP434I1735 (Accession XP_113763.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434I1735.

[55307] DKFZP434L187 (Accession XP_044070.6) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434L187 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434L187, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434L187 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55308] Another function of GAM7957 is therefore inhibition of DKFZP434L187 (Accession XP_044070.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434L187.

[55309] DKFZP434P0111 (Accession XP_041116.1) is another

GAM7957 target gene, herein designated TARGET GENE. DKFZP434P0111 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434P0111, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434P0111 BINDING SITE, designated SEQ ID:7178, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55310] Another function of GAM7957 is therefore inhibition of DKFZP434P0111 (Accession XP_041116.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434P0111.

[55311] DKFZP434P211 (Accession NP_055364.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP434P211 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP434P211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434P211 BINDING SITE,

designated SEQ ID:6448, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55312] Another function of GAM7957 is therefore inhibition of DKFZP434P211 (Accession NP_055364.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434P211.

[55313] DKFZp547C176 (Accession XP_040799.2) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp547C176 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp547C176, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547C176 BINDING SITE, designated SEQ ID:5830, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55314] Another function of GAM7957 is therefore inhibition of DKFZp547C176 (Accession XP_040799.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp547C176.

[55315] DKFZp547G183 (Accession NP_061175.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp547G183 BINDING SITE1 and DKFZp547G183 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZp547G183, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547G183 BINDING SITE1 and DKFZp547G183 BINDING SITE2, designated SEQ ID:9762 and SEQ ID:18018 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55316] Another function of GAM7957 is therefore inhibition of DKFZp547G183 (Accession NP_061175.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547G183.

[55317] DKFZp547I094 (Accession NP_115531.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp547I094 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp547I094, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547I094 BINDING SITE, designated SEQ ID:11012, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55318] Another function of GAM7957 is therefore inhibition of DKFZp547I094 (Accession NP_115531.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547I094.

[55319] DKFZP564I122 (Accession XP_032397.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP564I122 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP564I122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564I122 BINDING SITE, designated SEQ ID:8377, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55320] Another function of GAM7957 is therefore inhibition of

DKFZP564I122 (Accession XP_032397.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564I122.

[55321] DKFZP564J0863 (Accession NP_056274.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP564J0863 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP564J0863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564J0863 BINDING SITE, designated SEQ ID:14509, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55322] Another function of GAM7957 is therefore inhibition of DKFZP564J0863 (Accession NP_056274.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564J0863.

[55323] DKFZp564K142 (Accession NP_115497.2) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp564K142 BINDING SITE is a target binding site

found in the 3' untranslated region of mRNA encoded by DKFZp564K142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp564K142 BINDING SITE, designated SEQ ID:1903, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55324] Another function of GAM7957 is therefore inhibition of DKFZp564K142 (Accession NP_115497.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp564K142.

[55325] DKFZP564M182 (Accession XP_085525.3) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP564M182 BINDING SITE1 and DKFZP564M182 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZP564M182, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564M182 BINDING SITE1 and DKFZP564M182 BINDING SITE2, designated SEQ ID:16630 and SEQ ID:7401

respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55326] Another function of GAM7957 is therefore inhibition of DKFZP564M182 (Accession XP_085525.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564M182.

[55327] DKFZP564O0423 (Accession XP_166254.2) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP564O0423 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564O0423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564O0423 BINDING SITE, designated SEQ ID:2876, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55328] Another function of GAM7957 is therefore inhibition of DKFZP564O0423 (Accession XP_166254.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZP564O0423.

[55329] DKFZp566H0824 (Accession NP_060005.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp566H0824 BINDING SITE1 and DKFZp566H0824 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZp566H0824, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp566H0824 BINDING SITE1 and DKFZp566H0824 BINDING SITE2, designated SEQ ID:8019 and SEQ ID:7863 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55330] Another function of GAM7957 is therefore inhibition of DKFZp566H0824 (Accession NP_060005.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp566H0824.

[55331] DKFZP566J2046 (Accession NP_112485.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP566J2046 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

DKFZP566J2046, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566J2046 BINDING SITE, designated SEQ ID:1200, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55332] Another function of GAM7957 is therefore inhibition of DKFZP566J2046 (Accession NP_112485.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566J2046.

[55333] DKFZP566K0524 (Accession NP_056420.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP566K0524 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZP566K0524, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566K0524 BINDING SITE, designated SEQ ID:12521, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55334] Another function of GAM7957 is therefore inhibition of DKFZP566K0524 (Accession NP_056420.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566K0524.

[55335] DKFZp586C0721 (Accession XP_098416.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp586C0721 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp586C0721, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp586C0721 BINDING SITE, designated SEQ ID:19501, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55336] Another function of GAM7957 is therefore inhibition of DKFZp586C0721 (Accession XP_098416.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp586C0721.

[55337] DKFZP586C1324 (Accession XP_045876.1) is another GAM7957 target gene, herein designated TARGET GENE.

DKFZP586C1324 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP586C1324, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586C1324 BINDING SITE, designated SEQ ID:6014, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55338] Another function of GAM7957 is therefore inhibition of DKFZP586C1324 (Accession XP_045876.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586C1324.

[55339] DKFZP586M1120 (Accession NP_112584.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP586M1120 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZP586M1120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586M1120 BINDING SITE, designated SEQ ID:5614, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55340] Another function of GAM7957 is therefore inhibition of DKFZP586M1120 (Accession NP_112584.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586M1120.

[55341] DKFZp727A071 (Accession NP_689481.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp727A071 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZp727A071, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp727A071 BINDING SITE, designated SEQ ID:9974, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55342] Another function of GAM7957 is therefore inhibition of DKFZp727A071 (Accession NP_689481.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp727A071.

[55343] DKFZP727C091 (Accession XP_038689.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZP727C091 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZP727C091, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP727C091 BINDING SITE, designated SEQ ID:7653, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55344] Another function of GAM7957 is therefore inhibition of DKFZP727C091 (Accession XP_038689.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP727C091.

[55345] DKFZp727G131 (Accession NP_659802.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp727G131 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp727G131, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DKFZp727G131 BINDING SITE, designated SEQ ID:1693, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55346] Another function of GAM7957 is therefore inhibition of DKFZp727G131 (Accession NP_659802.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp727G131.

[55347] DKFZp761A052 (Accession XP_054098.4) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp761A052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761A052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761A052 BINDING SITE, designated SEQ ID:5957, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55348] Another function of GAM7957 is therefore inhibition of DKFZp761A052 (Accession XP_054098.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZp761A052.

[55349] DKFZp761G0122 (Accession NP_689874.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp761G0122 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761G0122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761G0122 BINDING SITE, designated SEQ ID:920, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55350] Another function of GAM7957 is therefore inhibition of DKFZp761G0122 (Accession NP_689874.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761G0122.

[55351] DKFZp761G2113 (Accession XP_046017.3) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp761G2113 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761G2113, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761G2113 BINDING SITE, designated SEQ ID:10014, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55352] Another function of GAM7957 is therefore inhibition of DKFZp761G2113 (Accession XP_046017.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761G2113.

[55353] DKFZp761H0421 (Accession NP_775102.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp761H0421 BINDING SITE1 and DKFZp761H0421 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZp761H0421, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761H0421 BINDING SITE1 and DKFZp761H0421 BINDING SITE2, designated SEQ ID:13155 and SEQ ID:15340 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55354] Another function of GAM7957 is therefore inhibition of DKFZp761H0421 (Accession NP_775102.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761H0421.

[55355] DKFZp761I2123 (Accession XP_166582.2) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp761I2123 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp761I2123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761I2123 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55356] Another function of GAM7957 is therefore inhibition of DKFZp761I2123 (Accession XP_166582.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761I2123.

[55357] DKFZp761J139 (Accession NP_115656.1) is another

GAM7957 target gene, herein designated TARGET GENE. DKFZp761J139 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZp761J139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761J139 BINDING SITE, designated SEQ ID:9330, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55358] Another function of GAM7957 is therefore inhibition of DKFZp761J139 (Accession NP_115656.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761J139.

[55359] DKFZp761L1417 (Accession NP_690877.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp761L1417 BINDING SITE1 and DKFZp761L1417 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZp761L1417, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

DKFZp761L1417 BINDING SITE1 and DKFZp761L1417 BINDING SITE2, designated SEQ ID:6861 and SEQ ID:11920 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55360] Another function of GAM7957 is therefore inhibition of DKFZp761L1417 (Accession NP_690877.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761L1417.

[55361] DKFZp761L1518 (Accession XP_294685.2) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp761L1518 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DKFZp761L1518, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761L1518 BINDING SITE, designated SEQ ID:19710, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55362] Another function of GAM7957 is therefore inhibition of DKFZp761L1518 (Accession XP_294685.2) . Accordingly,

utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761L1518.

[55363] DKFZp762I137 (Accession NP_689624.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp762I137 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp762I137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762I137 BINDING SITE, designated SEQ ID:2921, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55364] Another function of GAM7957 is therefore inhibition of DKFZp762I137 (Accession NP_689624.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762I137.

[55365] DKFZp762N1910 (Accession XP_290525.1) is another GAM7957 target gene, herein designated TARGET GENE. DKFZp762N1910 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

DKFZp762N1910, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762N1910 BINDING SITE, designated SEQ ID:8890, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55366] Another function of GAM7957 is therefore inhibition of DKFZp762N1910 (Accession XP_290525.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762N1910.

[55367] Dmc1 dosage suppressor of mck1 homolog, meiosis-specific homologous recombination (yeast) (DMC1, Accession NP_008999.2) is another GAM7957 target gene, herein designated TARGET GENE. DMC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DMC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMC1 BINDING SITE, designated SEQ ID:6684, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ

ID:297.

[55368] Another function of GAM7957 is therefore inhibition of Dmc1 dosage suppressor of mck1 homolog, meiosis-specific homologous recombination (yeast) (DMC1, Accession NP_008999.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMC1.

[55369] DNAM-1 (Accession NP_006557.1) is another GAM7957 target gene, herein designated TARGET GENE. DNAM-1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DNAM-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAM-1 BINDING SITE, designated SEQ ID:14329, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55370] Another function of GAM7957 is therefore inhibition of DNAM-1 (Accession NP_006557.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAM-1.

[55371] Deoxyribonuclease ii, lysosomal (DNASE2, Accession

NP_001366.1) is another GAM7957 target gene, herein designated TARGET GENE. DNASE2 BINDING SITE1 and DNASE2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DNASE2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNASE2 BINDING SITE1 and DNASE2 BINDING SITE2, designated SEQ ID:17444 and SEQ ID:12684 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55372] Another function of GAM7957 is therefore inhibition of Deoxyribonuclease ii, lysosomal (DNASE2, Accession NP_001366.1), a gene which has a possible role in apoptosis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNASE2.

[55373] The function of DNASE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Dynein, cytoplasmic, light polypeptide 2a (DNCL2A, Accession NP_808853.1) is another GAM7957 target gene, herein designated TARGET GENE. DNCL2A

BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DNCL2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNCL2A BINDING SITE, designated SEQ ID:9496, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55374] Another function of GAM7957 is therefore inhibition of Dynein, cytoplasmic, light polypeptide 2a (DNCL2A, Accession NP_808853.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNCL2A.

[55375] Dynein, cytoplasmic, light polypeptide 2a (DNCL2A, Accession NP_054902.1) is another GAM7957 target gene, herein designated TARGET GENE. DNCL2A BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DNCL2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNCL2A BINDING SITE, designated SEQ ID:9496, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55376] Another function of GAM7957 is therefore inhibition of Dynein, cytoplasmic, light polypeptide 2a (DNCL2A, Accession NP_054902.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNCL2A.

[55377] Dynein, cytoplasmic, light polypeptide 2b (DNCL2B, Accession NP_570967.1) is another GAM7957 target gene, herein designated TARGET GENE. DNCL2B BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DNCL2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNCL2B BINDING SITE, designated SEQ ID:908, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55378] Another function of GAM7957 is therefore inhibition of Dynein, cytoplasmic, light polypeptide 2b (DNCL2B, Accession NP_570967.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNCL2B.

[55379] Dipeptidylpeptidase 9 (DPP9, Accession NP_631898.1) is another GAM7957 target gene, herein designated TARGET GENE. DPP9 BINDING SITE1 and DPP9 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DPP9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DPP9 BINDING SITE1 and DPP9 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:9761 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55380] Another function of GAM7957 is therefore inhibition of Dipeptidylpeptidase 9 (DPP9, Accession NP_631898.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPP9.

[55381] DRF1 (Accession NP_079380.1) is another GAM7957 target gene, herein designated TARGET GENE. DRF1 BINDING SITE1 and DRF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by DRF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRF1 BINDING SITE1 and DRF1 BINDING SITE2, designated SEQ ID:11050 and SEQ ID:19029 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55382] Another function of GAM7957 is therefore inhibition of DRF1 (Accession NP_079380.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRF1.

[55383] DRIM (Accession NP_055318.1) is another GAM7957 target gene, herein designated TARGET GENE. DRIM BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DRIM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRIM BINDING SITE, designated SEQ ID:18872, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55384] Another function of GAM7957 is therefore inhibition of DRIM (Accession NP_055318.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with DRIM.

[55385] Desmocollin 1 (DSC1, Accession NP_077739.1) is another GAM7957 target gene, herein designated TARGET GENE. DSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC1 BINDING SITE, designated SEQ ID:1568, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55386] Another function of GAM7957 is therefore inhibition of Desmocollin 1 (DSC1, Accession NP_077739.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC1.

[55387] The function of DSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM195.1. Desmocollin 1 (DSC1, Accession NP_004939.1) is another GAM7957 target gene, herein

designated TARGET GENE. DSC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC1 BINDING SITE, designated SEQ ID:1568, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55388] Another function of GAM7957 is therefore inhibition of Desmocollin 1 (DSC1, Accession NP_004939.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC1.

[55389] The function of DSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM195.1. Desmocollin 2 (DSC2, Accession NP_004940.1) is another GAM7957 target gene, herein designated TARGET GENE. DSC2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DSC2, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC2 BINDING SITE, designated SEQ ID:19615, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55390] Another function of GAM7957 is therefore inhibition of Desmocollin 2 (DSC2, Accession NP_004940.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC2.

[55391] The function of DSC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1. Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1) is another GAM7957 target gene, herein designated TARGET GENE. DSCR6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DSCR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

DSCR6 BINDING SITE, designated SEQ ID:13664, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55392] Another function of GAM7957 is therefore inhibition of Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSCR6.

[55393] Dystrobrevin, beta (DTNB, Accession NP_068707.1) is another GAM7957 target gene, herein designated TARGET GENE. DTNB BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DTNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DTNB BINDING SITE, designated SEQ ID:2938, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55394] Another function of GAM7957 is therefore inhibition of Dystrobrevin, beta (DTNB, Accession NP_068707.1), a gene which is a part of a dystrophin-associated protein complex . and therefore may be associated with Limb-

girdle muscular dystrophy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Limb- girdle muscular dystrophy, and of other diseases and clinical conditions associated with DTNB.

[55395] The function of DTNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM100.1.Dystrobrevin, beta (DTNB, Accession NP_149160.1) is another GAM7957 target gene, herein designated TARGET GENE. DTNB BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by DTNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DTNB BINDING SITE, designated SEQ ID:2938, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55396] Another function of GAM7957 is therefore inhibition of Dystrobrevin, beta (DTNB, Accession NP_149160.1), a gene which is a part of a dystrophin- associated protein complex . and therefore may be associated with Limb- girdle muscular dystrophy. Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of Limb- girdle muscular dystrophy, and of other diseases and clinical conditions associated with DTNB.

[55397] The function of DTNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM100.1.Dishevelled, dsh homolog 3 (drosophila) (DVL3, Accession NP_004414.2) is another GAM7957 target gene, herein designated TARGET GENE. DVL3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DVL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DVL3 BINDING SITE, designated SEQ ID:7466, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55398] Another function of GAM7957 is therefore inhibition of Dishevelled, dsh homolog 3 (drosophila) (DVL3, Accession NP_004414.2), a gene which regulates cell proliferation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DVL3.

[55399] The function of DVL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Endothelial differentiation, sphingolipid g-protein-coupled receptor, 3 (EDG3, Accession NP_005217.1) is another GAM7957 target gene, herein designated TARGET GENE. EDG3 BINDING SITE1 and EDG3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by EDG3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDG3 BINDING SITE1 and EDG3 BINDING SITE2, designated SEQ ID:19288 and SEQ ID:6041 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55400] Another function of GAM7957 is therefore inhibition of Endothelial differentiation, sphingolipid g-protein-coupled receptor, 3 (EDG3, Accession NP_005217.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDG3.

[55401] Egf-like-domain, multiple 4 (EGFL4, Accession

XP_290821.1) is another GAM7957 target gene, herein designated TARGET GENE. EGFL4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EGFL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGFL4 BINDING SITE, designated SEQ ID:15055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55402] Another function of GAM7957 is therefore inhibition of Egf-like-domain, multiple 4 (EGFL4, Accession XP_290821.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EGFL4.

[55403] Egf-like-domain, multiple 5 (EGFL5, Accession XP_098838.1) is another GAM7957 target gene, herein designated TARGET GENE. EGFL5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EGFL5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGFL5 BINDING SITE, designated

SEQ ID:4534, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55404] Another function of GAM7957 is therefore inhibition of Egf-like-domain, multiple 5 (EGFL5, Accession XP_098838.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EGFL5.

[55405] Eh-domain containing 1 (EHD1, Accession NP_006786.2) is another GAM7957 target gene, herein designated TARGET GENE. EHD1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EHD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EHD1 BINDING SITE, designated SEQ ID:15638, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55406] Another function of GAM7957 is therefore inhibition of Eh-domain containing 1 (EHD1, Accession NP_006786.2), a gene which may be involved in ligand-initiated endocytosis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with EHD1.

[55407] The function of EHD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1. Eukaryotic translation initiation factor 1a (EIF1A, Accession NP_001403.1) is another GAM7957 target gene, herein designated TARGET GENE. EIF1A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EIF1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF1A BINDING SITE, designated SEQ ID:13049, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55408] Another function of GAM7957 is therefore inhibition of Eukaryotic translation initiation factor 1a (EIF1A, Accession NP_001403.1), a gene which seems to be required for maximal rate of protein biosynthesis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF1A.

[55409] The function of EIF1A and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM1345.1. Eukaryotic translation initiation factor 2 alpha kinase 4 (EIF2AK4, Accession XP_031612.6) is another GAM7957 target gene, herein designated TARGET GENE. EIF2AK4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EIF2AK4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig. 8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF2AK4 BINDING SITE, designated SEQ ID:11505, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55410] Another function of GAM7957 is therefore inhibition of Eukaryotic translation initiation factor 2 alpha kinase 4 (EIF2AK4, Accession XP_031612.6). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF2AK4.

[55411] Eukaryotic translation initiation factor 3, subunit 2 beta, 36kda (EIF3S2, Accession NP_003748.1) is another GAM7957 target gene, herein designated TARGET GENE. EIF3S2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EIF3S2, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF3S2 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55412] Another function of GAM7957 is therefore inhibition of Eukaryotic translation initiation factor 3, subunit 2 beta, 36kda (EIF3S2, Accession NP_003748.1), a gene which binds to the 40s ribosome and promotes the binding of methionyl- trnai and mrna. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF3S2.

[55413] The function of EIF3S2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.Elav (embryonic lethal, abnormal vision, drosophila)-like 2 (hu antigen b) (ELAVL2, Accession NP_004423.1) is another GAM7957 target gene, herein designated TARGET GENE. ELAVL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ELAVL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ELAVL2 BINDING SITE, designated SEQ ID:6187, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55414] Another function of GAM7957 is therefore inhibition of Elav (embryonic lethal, abnormal vision, drosophila)-like 2 (hu antigen b) (ELAVL2, Accession NP_004423.1), a gene which binds rna. seems to recognize a gaaa motif. can bind to its own 3' untranslated region (3'utr), the c- fos 3'utr and the id 3'utr. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ELAVL2.

[55415] The function of ELAVL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM439.1.E1a binding protein p300 (EP300, Accession NP_001420.1) is another GAM7957 target gene, herein designated TARGET GENE. EP300 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by EP300, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of EP300 BINDING SITE, designated SEQ ID:14306, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55416] Another function of GAM7957 is therefore inhibition of E1a binding protein p300 (EP300, Accession NP_001420.1), a gene which may have a function in cell cycle regulation. and therefore may be associated with Colorectal cancer. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Colorectal cancer, and of other diseases and clinical conditions associated with EP300.

[55417] The function of EP300 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM473.1.Ephb1 (EPHB1, Accession NP_004432.1) is another GAM7957 target gene, herein designated TARGET GENE. EPHB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EPHB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EPHB1 BINDING SITE, designated SEQ ID:3606,

to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55418] Another function of GAM7957 is therefore inhibition of Ephb1 (EPHB1, Accession NP_004432.1), a gene which receptor for members of the ephrin- b family. binds to ephrin- b1, - b2 and - b3. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EPHB1.

[55419] The function of EPHB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.ERAP140 (Accession XP_059748.2) is another GAM7957 target gene, herein designated TARGET GENE. ERAP140 BINDING SITE1 and ERAP140 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ERAP140, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERAP140 BINDING SITE1 and ERAP140 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:12831 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55420] Another function of GAM7957 is therefore inhibition of ERAP140 (Accession XP_059748.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERAP140.

[55421] ET (Accession NP_077287.1) is another GAM7957 target gene, herein designated TARGET GENE. ET BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ET, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ET BINDING SITE, designated SEQ ID:11097, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55422] Another function of GAM7957 is therefore inhibition of ET (Accession NP_077287.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ET.

[55423] EXO70 (Accession NP_056034.1) is another GAM7957 target gene, herein designated TARGET GENE. EXO70 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by EXO70, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EXO70 BINDING SITE, designated SEQ ID:6447, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55424] Another function of GAM7957 is therefore inhibition of EXO70 (Accession NP_056034.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EXO70.

[55425] Coagulation factor ii (thrombin) receptor-like 3 (F2RL3, Accession NP_003941.1) is another GAM7957 target gene, herein designated TARGET GENE. F2RL3 BINDING SITE1 through F2RL3 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by F2RL3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F2RL3 BINDING SITE1 through F2RL3 BINDING SITE4, designated SEQ ID:13066, SEQ ID:10569, SEQ ID:4424 and SEQ ID:18740 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55426] Another function of GAM7957 is therefore inhibition of Coagulation factor ii (thrombin) receptor-like 3 (F2RL3, Accession NP_003941.1), a gene which Protease- activated receptor 4; G protein- coupled receptor that increases phosphoinositide hydrolysis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F2RL3.

[55427] The function of F2RL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Fatty acid desaturase 1 (FADS1, Accession NP_037534.2) is another GAM7957 target gene, herein designated TARGET GENE. FADS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FADS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FADS1 BINDING SITE, designated SEQ ID:10611, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55428] Another function of GAM7957 is therefore inhibition of Fatty acid desaturase 1 (FADS1, Accession NP_037534.2) .

Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FADS1.

[55429] Fatty acid desaturase 2 (FADS2, Accession NP_004256.1) is another GAM7957 target gene, herein designated TARGET GENE. FADS2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FADS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FADS2 BINDING SITE, designated SEQ ID:7605, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55430] Another function of GAM7957 is therefore inhibition of Fatty acid desaturase 2 (FADS2, Accession NP_004256.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FADS2.

[55431] Fanconi anemia, complementation group c (FANCC, Accession NP_000127.1) is another GAM7957 target gene, herein designated TARGET GENE. FANCC BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by FANCC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCC BINDING SITE, designated SEQ ID:16815, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55432] Another function of GAM7957 is therefore inhibition of Fanconi anemia, complementation group c (FANCC, Accession NP_000127.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FANCC.

[55433] FBLP-1 (Accession NP_060026.1) is another GAM7957 target gene, herein designated TARGET GENE. FBLP-1 BINDING SITE1 and FBLP-1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FBLP-1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBLP-1 BINDING SITE1 and FBLP-1 BINDING SITE2, designated SEQ ID:15697 and SEQ ID:13065 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55434] Another function of GAM7957 is therefore inhibition of FBLP-1 (Accession NP_060026.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBLP-1.

[55435] FBLP-1 (Accession XP_290943.1) is another GAM7957 target gene, herein designated TARGET GENE. FBLP-1 BINDING SITE1 and FBLP-1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FBLP-1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBLP-1 BINDING SITE1 and FBLP-1 BINDING SITE2, designated SEQ ID:15697 and SEQ ID:5802 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55436] Another function of GAM7957 is therefore inhibition of FBLP-1 (Accession XP_290943.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBLP-1.

[55437] F-box only protein 26 (FBXO26, Accession NP_079183.4) is another GAM7957 target gene, herein designated TAR-

GET GENE. FBXO26 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FBXO26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO26 BINDING SITE, designated SEQ ID:6268, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55438] Another function of GAM7957 is therefore inhibition of F-box only protein 26 (FBXO26, Accession NP_079183.4). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO26.

[55439] F-box only protein 26 (FBXO26, Accession NP_680474.1) is another GAM7957 target gene, herein designated TARGET GENE. FBXO26 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FBXO26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO26 BINDING SITE, designated SEQ ID:6268, to the nucleotide sequence

of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55440] Another function of GAM7957 is therefore inhibition of F-box only protein 26 (FBXO26, Accession NP_680474.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO26.

[55441] F-box only protein 27 (FBXO27, Accession XP_059045.1) is another GAM7957 target gene, herein designated TARGET GENE. FBXO27 BINDING SITE1 and FBXO27 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FBXO27, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO27 BINDING SITE1 and FBXO27 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:19101 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55442] Another function of GAM7957 is therefore inhibition of F-box only protein 27 (FBXO27, Accession XP_059045.1) . Accordingly, utilities of GAM7957 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with FBXO27.

[55443] F-box only protein 27 (FBXO27, Accession NP_849142.1) is another GAM7957 target gene, herein designated TARGET GENE. FBXO27 BINDING SITE1 and FBXO27 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FBXO27, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO27 BINDING SITE1 and FBXO27 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:19101 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55444] Another function of GAM7957 is therefore inhibition of F-box only protein 27 (FBXO27, Accession NP_849142.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO27.

[55445] F-box only protein 6 (FBXO6, Accession NP_060908.1) is another GAM7957 target gene, herein designated TARGET GENE. FBXO6 BINDING SITE is a target binding site found

in the 3' untranslated region of mRNA encoded by FBXO6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO6 BINDING SITE, designated SEQ ID:14305, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55446] Another function of GAM7957 is therefore inhibition of F-box only protein 6 (FBXO6, Accession NP_060908.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO6.

[55447] F-box only protein 9 (FBXO9, Accession NP_258441.1) is another GAM7957 target gene, herein designated TARGET GENE. FBXO9 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FBXO9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO9 BINDING SITE, designated SEQ ID:7864, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55448] Another function of GAM7957 is therefore inhibition of F-box only protein 9 (FBXO9, Accession NP_258441.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO9.

[55449] Fc fragment of iga, receptor for (FCAR, Accession NP_579814.1) is another GAM7957 target gene, herein designated TARGET GENE. FCAR BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FCAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE, designated SEQ ID:9833, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55450] Another function of GAM7957 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579814.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[55451] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fc fragment of iga, receptor for (FCAR, Accession NP_579813.1) is another GAM7957 target gene, herein designated TARGET GENE. FCAR BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FCAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE, designated SEQ ID:9833, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55452] Another function of GAM7957 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579813.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[55453] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fukuyama type congenital muscular dystrophy (fukutin) (FCMD, Accession NP_006722.1) is another GAM7957 target gene, herein designated TARGET GENE. FCMD BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FCMD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCMD BINDING SITE, designated SEQ ID:1356, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55454] Another function of GAM7957 is therefore inhibition of Fukuyama type congenital muscular dystrophy (fukutin) (FCMD, Accession NP_006722.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FCMD.

[55455] Ficolin (collagen/fibrinogen domain containing lectin) 2 (hucolin) (FCN2, Accession NP_056653.1) is another

GAM7957 target gene, herein designated TARGET GENE. FCN2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FCN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCN2 BINDING SITE, designated SEQ ID:12186, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55456] Another function of GAM7957 is therefore inhibition of Ficolin (collagen/fibrinogen domain containing lectin) 2 (hucolin) (FCN2, Accession NP_056653.1), a gene which is involved in phagocytosis of pathogens. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FCN2.

[55457] The function of FCN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Ficolin (collagen/fibrinogen domain containing lectin) 2 (hucolin) (FCN2, Accession NP_056654.1) is another GAM7957 target gene, herein designated TAR-

GET GENE. FCN2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FCN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCN2 BINDING SITE, designated SEQ ID:12186, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55458] Another function of GAM7957 is therefore inhibition of Ficolin (collagen/fibrinogen domain containing lectin) 2 (hucolin) (FCN2, Accession NP_056654.1), a gene which is involved in phagocytosis of pathogens. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FCN2.

[55459] The function of FCN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Fibroblast growth factor 2 (basic) (FGF2, Accession NP_001997.3) is another GAM7957 target gene, herein designated TARGET GENE. FGF2 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by FGF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF2 BINDING SITE, designated SEQ ID:15312, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55460] Another function of GAM7957 is therefore inhibition of Fibroblast growth factor 2 (basic) (FGF2, Accession NP_001997.3), a gene which the Basic fibroblast growth factor 2; is mitogenic, angiogenic, and neurotrophic factor. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF2.

[55461] The function of FGF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM36.1. Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075595.1) is another GAM7957 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FGFR1, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:16118, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55462] Another function of GAM7957 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075595.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[55463] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075596.1) is another GAM7957 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:16118, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA,

also designated SEQ ID:297.

[55464] Another function of GAM7957 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075596.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[55465] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075263.1) is another GAM7957 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:5528, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55466] Another function of GAM7957 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed ki-

nase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075263.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[55467] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075262.1) is another GAM7957 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:5528, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55468] Another function of GAM7957 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial

dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson–weiss syndrome) (FGFR2, Accession NP_075262.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[55469] Fibroblast growth factor receptor–like 1 (FGFRL1, Accession NP_068742.1) is another GAM7957 target gene, herein designated TARGET GENE. FGFRL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FGFRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFRL1 BINDING SITE, designated SEQ ID:19614, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55470] Another function of GAM7957 is therefore inhibition of Fibroblast growth factor receptor–like 1 (FGFRL1, Accession NP_068742.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFRL1.

[55471] Fk506 binding protein 14, 22 kda (FKBP14, Accession NP_060416.1) is another GAM7957 target gene, herein

designated TARGET GENE. FKBP14 BINDING SITE1 and FKBP14 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FKBP14, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FKBP14 BINDING SITE1 and FKBP14 BINDING SITE2, designated SEQ ID:19054 and SEQ ID:6269 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55472] Another function of GAM7957 is therefore inhibition of Fk506 binding protein 14, 22 kda (FKBP14, Accession NP_060416.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FKBP14.

[55473] FKSG17 (Accession NP_114420.1) is another GAM7957 target gene, herein designated TARGET GENE. FKSG17 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FKSG17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FKSG17 BINDING SITE, designated SEQ ID:9322, to the nu-

cleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55474] Another function of GAM7957 is therefore inhibition of FKSG17 (Accession NP_114420.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FKSG17.

[55475] FLJ00060 (Accession XP_028154.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ00060 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ00060, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00060 BINDING SITE, designated SEQ ID:11462, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55476] Another function of GAM7957 is therefore inhibition of FLJ00060 (Accession XP_028154.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00060.

[55477] FLJ00225 (Accession XP_084552.3) is another GAM7957 target gene, herein designated TARGET GENE. FLJ00225

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ00225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00225 BINDING SITE, designated SEQ ID:8941, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55478] Another function of GAM7957 is therefore inhibition of FLJ00225 (Accession XP_084552.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00225.

[55479] FLJ10058 (Accession NP_060455.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10058 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10058 BINDING SITE, designated SEQ ID:6015, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55480] Another function of GAM7957 is therefore inhibition of FLJ10058 (Accession NP_060455.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10058.

[55481] FLJ10120 (Accession NP_060471.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10120 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10120 BINDING SITE, designated SEQ ID:5141, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55482] Another function of GAM7957 is therefore inhibition of FLJ10120 (Accession NP_060471.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10120.

[55483] FLJ10139 (Accession NP_060475.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10139 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ10139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10139 BINDING SITE, designated SEQ ID:17277, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55484] Another function of GAM7957 is therefore inhibition of FLJ10139 (Accession NP_060475.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10139.

[55485] FLJ10244 (Accession NP_060507.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10244 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10244, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10244 BINDING SITE, designated SEQ ID:11741, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55486] Another function of GAM7957 is therefore inhibition of

FLJ10244 (Accession NP_060507.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10244.

[55487] FLJ10300 (Accession NP_060521.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10300 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ10300, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10300 BINDING SITE, designated SEQ ID:2126, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55488] Another function of GAM7957 is therefore inhibition of FLJ10300 (Accession NP_060521.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10300.

[55489] FLJ10357 (Accession NP_060541.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10357 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ10357, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10357 BINDING SITE, designated SEQ ID:5754, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55490] Another function of GAM7957 is therefore inhibition of FLJ10357 (Accession NP_060541.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10357.

[55491] FLJ10460 (Accession NP_060567.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10460 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10460, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10460 BINDING SITE, designated SEQ ID:3325, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55492] Another function of GAM7957 is therefore inhibition of FLJ10460 (Accession NP_060567.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10460.

[55493] FLJ10520 (Accession NP_060594.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10520 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10520, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10520 BINDING SITE, designated SEQ ID:2838, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55494] Another function of GAM7957 is therefore inhibition of FLJ10520 (Accession NP_060594.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10520.

[55495] FLJ10534 (Accession NP_060598.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10534 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10534, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10534 BINDING SITE, designated SEQ ID:6240, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55496] Another function of GAM7957 is therefore inhibition of FLJ10534 (Accession NP_060598.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10534.

[55497] FLJ10547 (Accession NP_060604.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10547 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10547, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10547 BINDING SITE, designated SEQ ID:18846, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55498] Another function of GAM7957 is therefore inhibition of FLJ10547 (Accession NP_060604.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ10547.

[55499] FLJ10781 (Accession NP_060685.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10781 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10781, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10781 BINDING SITE, designated SEQ ID:909, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55500] Another function of GAM7957 is therefore inhibition of FLJ10781 (Accession NP_060685.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10781.

[55501] FLJ10803 (Accession NP_060694.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10803 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ10803 BINDING SITE, designated SEQ ID:15983, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55502] Another function of GAM7957 is therefore inhibition of FLJ10803 (Accession NP_060694.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10803.

[55503] FLJ10826 (Accession NP_060703.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10826 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10826, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10826 BINDING SITE, designated SEQ ID:19057, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55504] Another function of GAM7957 is therefore inhibition of FLJ10826 (Accession NP_060703.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ10826.

[55505] FLJ10932 (Accession NP_060747.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10932 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10932, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10932 BINDING SITE, designated SEQ ID:15224, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55506] Another function of GAM7957 is therefore inhibition of FLJ10932 (Accession NP_060747.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10932.

[55507] FLJ10936 (Accession NP_060749.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ10936 BINDING SITE1 and FLJ10936 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ10936, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FLJ10936 BINDING SITE1 and FLJ10936 BINDING SITE2, designated SEQ ID:1291 and SEQ ID:16966 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55508] Another function of GAM7957 is therefore inhibition of FLJ10936 (Accession NP_060749.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10936.

[55509] FLJ11029 (Accession NP_060774.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11029 BINDING SITE1 through FLJ11029 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ11029, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11029 BINDING SITE1 through FLJ11029 BINDING SITE3, designated SEQ ID:18691, SEQ ID:17631 and SEQ ID:8904 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55510] Another function of GAM7957 is therefore inhibition of

FLJ11029 (Accession NP_060774.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11029.

[55511] FLJ11036 (Accession NP_060776.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11036 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11036, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11036 BINDING SITE, designated SEQ ID:7218, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55512] Another function of GAM7957 is therefore inhibition of FLJ11036 (Accession NP_060776.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11036.

[55513] FLJ11042 (Accession NP_060778.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11042 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11042, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11042 BINDING SITE, designated SEQ ID:19379, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55514] Another function of GAM7957 is therefore inhibition of FLJ11042 (Accession NP_060778.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11042.

[55515] FLJ11106 (Accession NP_060794.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11106 BINDING SITE1 and FLJ11106 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ11106, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11106 BINDING SITE1 and FLJ11106 BINDING SITE2, designated SEQ ID:10375 and SEQ ID:4880 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55516] Another function of GAM7957 is therefore inhibition of FLJ11106 (Accession NP_060794.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11106.

[55517] FLJ11126 (Accession NP_060802.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11126 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11126, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11126 BINDING SITE, designated SEQ ID:11721, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55518] Another function of GAM7957 is therefore inhibition of FLJ11126 (Accession NP_060802.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11126.

[55519] FLJ11151 (Accession NP_060810.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11151 BINDING SITE1 and FLJ11151 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by FLJ11151, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11151 BINDING SITE1 and FLJ11151 BINDING SITE2, designated SEQ ID:12335 and SEQ ID:3794 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55520] Another function of GAM7957 is therefore inhibition of FLJ11151 (Accession NP_060810.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11151.

[55521] FLJ11259 (Accession NP_060840.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11259 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11259 BINDING SITE, designated SEQ ID:18025, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55522] Another function of GAM7957 is therefore inhibition of FLJ11259 (Accession NP_060840.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11259.

[55523] FLJ11301 (Accession NP_060855.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11301 BINDING SITE1 and FLJ11301 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ11301, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11301 BINDING SITE1 and FLJ11301 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:5229 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55524] Another function of GAM7957 is therefore inhibition of FLJ11301 (Accession NP_060855.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11301.

[55525] FLJ11370 (Accession NP_079237.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11370 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11370, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11370 BINDING SITE, designated SEQ ID:1492, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55526] Another function of GAM7957 is therefore inhibition of FLJ11370 (Accession NP_079237.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11370.

[55527] FLJ11577 (Accession NP_079435.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11577 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11577, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11577 BINDING SITE, designated SEQ ID:4977, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55528] Another function of GAM7957 is therefore inhibition of FLJ11577 (Accession NP_079435.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11577.

[55529] FLJ11700 (Accession NP_079168.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11700 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11700, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11700 BINDING SITE, designated SEQ ID:8533, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55530] Another function of GAM7957 is therefore inhibition of FLJ11700 (Accession NP_079168.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11700.

[55531] FLJ11710 (Accession NP_079122.1) is another GAM7957

target gene, herein designated TARGET GENE. FLJ11710 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ11710, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11710 BINDING SITE, designated SEQ ID:12055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55532] Another function of GAM7957 is therefore inhibition of FLJ11710 (Accession NP_079122.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11710.

[55533] FLJ11715 (Accession NP_078840.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11715 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11715, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11715 BINDING SITE, designated SEQ ID:16495, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55534] Another function of GAM7957 is therefore inhibition of FLJ11715 (Accession NP_078840.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11715.

[55535] FLJ11722 (Accession NP_079246.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11722 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11722, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11722 BINDING SITE, designated SEQ ID:8840, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55536] Another function of GAM7957 is therefore inhibition of FLJ11722 (Accession NP_079246.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11722.

[55537] FLJ11800 (Accession NP_079250.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11800

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11800 BINDING SITE, designated SEQ ID:10310, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55538] Another function of GAM7957 is therefore inhibition of FLJ11800 (Accession NP_079250.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11800.

[55539] FLJ11996 (Accession NP_079252.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ11996 BINDING SITE1 and FLJ11996 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ11996, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11996 BINDING SITE1 and FLJ11996 BINDING SITE2, designated SEQ ID:3322 and SEQ ID:12331 respectively, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55540] Another function of GAM7957 is therefore inhibition of FLJ11996 (Accession NP_079252.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11996.

[55541] FLJ12056 (Accession NP_079209.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12056 BINDING SITE1 and FLJ12056 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12056, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12056 BINDING SITE1 and FLJ12056 BINDING SITE2, designated SEQ ID:12398 and SEQ ID:5828 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55542] Another function of GAM7957 is therefore inhibition of FLJ12056 (Accession NP_079209.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ12056.

[55543] FLJ12078 (Accession NP_079253.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12078 BINDING SITE1 and FLJ12078 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12078, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12078 BINDING SITE1 and FLJ12078 BINDING SITE2, designated SEQ ID:13066 and SEQ ID:8723 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55544] Another function of GAM7957 is therefore inhibition of FLJ12078 (Accession NP_079253.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12078.

[55545] FLJ12190 (Accession NP_079347.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12190 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12190, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12190 BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55546] Another function of GAM7957 is therefore inhibition of FLJ12190 (Accession NP_079347.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12190.

[55547] FLJ12298 (Accession NP_115540.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12298 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12298 BINDING SITE, designated SEQ ID:6415, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55548] Another function of GAM7957 is therefore inhibition of FLJ12298 (Accession NP_115540.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ12298.

[55549] FLJ12303 (Accession NP_115541.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12303 BINDING SITE1 and FLJ12303 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12303, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12303 BINDING SITE1 and FLJ12303 BINDING SITE2, designated SEQ ID:16879 and SEQ ID:16943 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55550] Another function of GAM7957 is therefore inhibition of FLJ12303 (Accession NP_115541.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12303.

[55551] FLJ12331 (Accession NP_079262.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12331 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12331, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12331 BINDING SITE, designated SEQ ID:10982, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55552] Another function of GAM7957 is therefore inhibition of FLJ12331 (Accession NP_079262.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12331.

[55553] FLJ12448 (Accession NP_075046.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12448 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12448, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12448 BINDING SITE, designated SEQ ID:13668, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55554] Another function of GAM7957 is therefore inhibition of FLJ12448 (Accession NP_075046.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12448.

[55555] FLJ12484 (Accession NP_073604.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12484 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12484, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12484 BINDING SITE, designated SEQ ID:2963, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55556] Another function of GAM7957 is therefore inhibition of FLJ12484 (Accession NP_073604.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12484.

[55557] FLJ12586 (Accession NP_078896.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12586 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12586, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12586 BINDING SITE, designated SEQ ID:1908, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55558] Another function of GAM7957 is therefore inhibition of FLJ12586 (Accession NP_078896.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12586.

[55559] FLJ12606 (Accession NP_079080.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12606 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12606 BINDING SITE, designated SEQ ID:5039, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55560] Another function of GAM7957 is therefore inhibition of FLJ12606 (Accession NP_079080.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ12606.

[55561] FLJ12618 (Accession NP_079160.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12618 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12618, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12618 BINDING SITE, designated SEQ ID:17753, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55562] Another function of GAM7957 is therefore inhibition of FLJ12618 (Accession NP_079160.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12618.

[55563] FLJ12660 (Accession NP_079428.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12660 BINDING SITE1 and FLJ12660 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12660, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12660 BINDING SITE1 and FLJ12660 BINDING SITE2, designated SEQ ID:7966 and SEQ ID:8107 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55564] Another function of GAM7957 is therefore inhibition of FLJ12660 (Accession NP_079428.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12660.

[55565] FLJ12666 (Accession NP_078871.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12666 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12666, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12666 BINDING SITE, designated SEQ ID:19695, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55566] Another function of GAM7957 is therefore inhibition of FLJ12666 (Accession NP_078871.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12666.

[55567] FLJ12671 (Accession NP_112242.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12671 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12671, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12671 BINDING SITE, designated SEQ ID:14567, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55568] Another function of GAM7957 is therefore inhibition of FLJ12671 (Accession NP_112242.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12671.

[55569] FLJ12687 (Accession NP_079193.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12687 BINDING SITE1 and FLJ12687 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12687, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12687 BINDING SITE1 and FLJ12687 BINDING SITE2, designated SEQ ID:6150 and SEQ ID:13584 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55570] Another function of GAM7957 is therefore inhibition of FLJ12687 (Accession NP_079193.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12687.

[55571] FLJ12800 (Accession NP_075054.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12800 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12800 BINDING SITE, designated SEQ ID:1400, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55572] Another function of GAM7957 is therefore inhibition of

FLJ12800 (Accession NP_075054.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12800.

[55573] FLJ12921 (Accession NP_079151.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12921 BINDING SITE1 and FLJ12921 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12921, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12921 BINDING SITE1 and FLJ12921 BINDING SITE2, designated SEQ ID:15316 and SEQ ID:15108 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55574] Another function of GAM7957 is therefore inhibition of FLJ12921 (Accession NP_079151.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12921.

[55575] FLJ12986 (Accession XP_290685.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ12986

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ12986, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12986 BINDING SITE, designated SEQ ID:6600, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55576] Another function of GAM7957 is therefore inhibition of FLJ12986 (Accession XP_290685.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12986.

[55577] FLJ13154 (Accession NP_078874.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13154 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ13154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13154 BINDING SITE, designated SEQ ID:13134, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55578] Another function of GAM7957 is therefore inhibition of FLJ13154 (Accession NP_078874.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13154.

[55579] FLJ13162 (Accession NP_079278.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13162 BINDING SITE is a target binding site found in the 3` un-translated region of mRNA encoded by FLJ13162, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13162 BINDING SITE, designated SEQ ID:19052, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55580] Another function of GAM7957 is therefore inhibition of FLJ13162 (Accession NP_079278.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13162.

[55581] FLJ13171 (Accession NP_076412.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13171 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ13171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13171 BINDING SITE, designated SEQ ID:9763, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55582] Another function of GAM7957 is therefore inhibition of FLJ13171 (Accession NP_076412.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13171.

[55583] FLJ13236 (Accession NP_079178.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13236 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13236, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13236 BINDING SITE, designated SEQ ID:6757, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55584] Another function of GAM7957 is therefore inhibition of

FLJ13236 (Accession NP_079178.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13236.

[55585] FLJ13241 (Accession NP_079364.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13241 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13241 BINDING SITE, designated SEQ ID:9173, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55586] Another function of GAM7957 is therefore inhibition of FLJ13241 (Accession NP_079364.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13241.

[55587] FLJ13305 (Accession XP_291019.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13305 BINDING SITE1 and FLJ13305 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by FLJ13305, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13305 BINDING SITE1 and FLJ13305 BINDING SITE2, designated SEQ ID:8647 and SEQ ID:7048 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55588] Another function of GAM7957 is therefore inhibition of FLJ13305 (Accession XP_291019.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13305.

[55589] FLJ13448 (Accession NP_079423.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13448 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13448, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13448 BINDING SITE, designated SEQ ID:17453, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55590] Another function of GAM7957 is therefore inhibition of FLJ13448 (Accession NP_079423.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13448.

[55591] FLJ13456 (Accession XP_038291.5) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13456 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13456 BINDING SITE, designated SEQ ID:8296, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55592] Another function of GAM7957 is therefore inhibition of FLJ13456 (Accession XP_038291.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13456.

[55593] FLJ13544 (Accession NP_079284.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13544 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ13544, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13544 BINDING SITE, designated SEQ ID:16514, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55594] Another function of GAM7957 is therefore inhibition of FLJ13544 (Accession NP_079284.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13544.

[55595] FLJ13611 (Accession NP_079217.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13611 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13611, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13611 BINDING SITE, designated SEQ ID:12723, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55596] Another function of GAM7957 is therefore inhibition of

FLJ13611 (Accession NP_079217.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13611.

[55597] FLJ13621 (Accession NP_079285.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13621 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13621, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13621 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55598] Another function of GAM7957 is therefore inhibition of FLJ13621 (Accession NP_079285.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13621.

[55599] FLJ13769 (Accession NP_079288.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13769 BINDING SITE1 and FLJ13769 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by FLJ13769, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13769 BINDING SITE1 and FLJ13769 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:19422 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55600] Another function of GAM7957 is therefore inhibition of FLJ13769 (Accession NP_079288.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13769.

[55601] FLJ13984 (Accession NP_079046.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ13984 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ13984, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13984 BINDING SITE, designated SEQ ID:7450, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55602] Another function of GAM7957 is therefore inhibition of FLJ13984 (Accession NP_079046.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13984.

[55603] FLJ14069 (Accession NP_079299.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14069 BINDING SITE is a target binding site found in the 3` un-translated region of mRNA encoded by FLJ14069, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14069 BINDING SITE, designated SEQ ID:19033, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55604] Another function of GAM7957 is therefore inhibition of FLJ14069 (Accession NP_079299.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14069.

[55605] FLJ14100 (Accession NP_079301.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14100 BINDING SITE1 and FLJ14100 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by FLJ14100, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14100 BINDING SITE1 and FLJ14100 BINDING SITE2, designated SEQ ID:4880 and SEQ ID:4061 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55606] Another function of GAM7957 is therefore inhibition of FLJ14100 (Accession NP_079301.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14100.

[55607] FLJ14117 (Accession NP_073614.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14117 BINDING SITE1 through FLJ14117 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ14117, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14117 BINDING SITE1 through FLJ14117 BINDING SITE3, designated SEQ ID:7796, SEQ

ID:4313 and SEQ ID:10125 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55608] Another function of GAM7957 is therefore inhibition of FLJ14117 (Accession NP_073614.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14117.

[55609] FLJ14129 (Accession NP_112157.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14129 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14129, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14129 BINDING SITE, designated SEQ ID:10918, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55610] Another function of GAM7957 is therefore inhibition of FLJ14129 (Accession NP_112157.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14129.

[55611] FLJ14327 (Accession NP_079188.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14327 BINDING SITE1 and FLJ14327 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ14327, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14327 BINDING SITE1 and FLJ14327 BINDING SITE2, designated SEQ ID:17423 and SEQ ID:13517 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55612] Another function of GAM7957 is therefore inhibition of FLJ14327 (Accession NP_079188.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14327.

[55613] FLJ14345 (Accession NP_079009.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14345 BINDING SITE1 and FLJ14345 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ14345, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14345 BINDING SITE1 and FLJ14345 BINDING SITE2, designated SEQ ID:14502 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55614] Another function of GAM7957 is therefore inhibition of FLJ14345 (Accession NP_079009.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14345.

[55615] FLJ14397 (Accession NP_116168.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14397 BINDING SITE1 and FLJ14397 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ14397, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14397 BINDING SITE1 and FLJ14397 BINDING SITE2, designated SEQ ID:15345 and SEQ ID:4880 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55616] Another function of GAM7957 is therefore inhibition of FLJ14397 (Accession NP_116168.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14397.

[55617] FLJ14457 (Accession NP_116177.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14457 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14457, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14457 BINDING SITE, designated SEQ ID:18269, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55618] Another function of GAM7957 is therefore inhibition of FLJ14457 (Accession NP_116177.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14457.

[55619] FLJ14466 (Accession NP_116179.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14466 BINDING SITE1 through FLJ14466 BINDING SITE3 are target

binding sites found in untranslated regions of mRNA encoded by FLJ14466, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14466 BINDING SITE1 through FLJ14466 BINDING SITE3, designated SEQ ID:14789, SEQ ID:5830 and SEQ ID:16279 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55620] Another function of GAM7957 is therefore inhibition of FLJ14466 (Accession NP_116179.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14466.

[55621] FLJ14490 (Accession NP_116182.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14490 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14490, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14490 BINDING SITE, designated SEQ ID:10571, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55622] Another function of GAM7957 is therefore inhibition of FLJ14490 (Accession NP_116182.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14490.

[55623] FLJ14642 (Accession NP_116207.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ14642 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ14642, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14642 BINDING SITE, designated SEQ ID:16502, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55624] Another function of GAM7957 is therefore inhibition of FLJ14642 (Accession NP_116207.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14642.

[55625] FLJ20006 (Accession NP_060088.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20006

BINDING SITE1 and FLJ20006 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20006, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20006 BINDING SITE1 and FLJ20006 BINDING SITE2, designated SEQ ID:14201 and SEQ ID:6217 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55626] Another function of GAM7957 is therefore inhibition of FLJ20006 (Accession NP_060088.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20006.

[55627] FLJ20013 (Accession NP_060091.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20013 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20013, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20013 BINDING SITE, designated SEQ ID:14786, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55628] Another function of GAM7957 is therefore inhibition of FLJ20013 (Accession NP_060091.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20013.

[55629] FLJ20019 (Accession NP_060094.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20019 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20019 BINDING SITE, designated SEQ ID:10518, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55630] Another function of GAM7957 is therefore inhibition of FLJ20019 (Accession NP_060094.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20019.

[55631] FLJ20045 (Accession NP_060108.1) is another GAM7957

target gene, herein designated TARGET GENE. FLJ20045 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20045 BINDING SITE, designated SEQ ID:13209, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55632] Another function of GAM7957 is therefore inhibition of FLJ20045 (Accession NP_060108.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20045.

[55633] FLJ20069 (Accession NP_060121.3) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20069 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20069, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20069 BINDING SITE, designated SEQ ID:17194, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55634] Another function of GAM7957 is therefore inhibition of FLJ20069 (Accession NP_060121.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20069.

[55635] FLJ20139 (Accession NP_060155.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20139 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20139 BINDING SITE, designated SEQ ID:12593, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55636] Another function of GAM7957 is therefore inhibition of FLJ20139 (Accession NP_060155.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20139.

[55637] FLJ20151 (Accession NP_060159.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20151

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20151, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20151 BINDING SITE, designated SEQ ID:17280, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55638] Another function of GAM7957 is therefore inhibition of FLJ20151 (Accession NP_060159.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20151.

[55639] FLJ20152 (Accession NP_061873.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20152 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ20152, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20152 BINDING SITE, designated SEQ ID:17311, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55640] Another function of GAM7957 is therefore inhibition of FLJ20152 (Accession NP_061873.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20152.

[55641] FLJ20203 (Accession NP_115668.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20203 BINDING SITE1 and FLJ20203 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FLJ20203, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20203 BINDING SITE1 and FLJ20203 BINDING SITE2, designated SEQ ID:15426 and SEQ ID:3492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55642] Another function of GAM7957 is therefore inhibition of FLJ20203 (Accession NP_115668.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20203.

[55643] FLJ20211 (Accession NP_060183.1) is another GAM7957

target gene, herein designated TARGET GENE. FLJ20211 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20211 BINDING SITE, designated SEQ ID:13691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55644] Another function of GAM7957 is therefore inhibition of FLJ20211 (Accession NP_060183.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20211.

[55645] FLJ20257 (Accession NP_062552.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20257 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20257, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20257 BINDING SITE, designated SEQ ID:17007, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55646] Another function of GAM7957 is therefore inhibition of FLJ20257 (Accession NP_062552.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20257.

[55647] FLJ20280 (Accession NP_060211.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20280 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20280, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20280 BINDING SITE, designated SEQ ID:12403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55648] Another function of GAM7957 is therefore inhibition of FLJ20280 (Accession NP_060211.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20280.

[55649] FLJ20306 (Accession NP_060226.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20306

BINDING SITE1 and FLJ20306 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20306, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20306 BINDING SITE1 and FLJ20306 BINDING SITE2, designated SEQ ID:3975 and SEQ ID:15330 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55650] Another function of GAM7957 is therefore inhibition of FLJ20306 (Accession NP_060226.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20306.

[55651] FLJ20337 (Accession NP_060242.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20337 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20337 BINDING SITE, designated SEQ ID:4177, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55652] Another function of GAM7957 is therefore inhibition of FLJ20337 (Accession NP_060242.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20337.

[55653] FLJ20413 (Accession NP_060278.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20413 BINDING SITE1 and FLJ20413 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20413, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20413 BINDING SITE1 and FLJ20413 BINDING SITE2, designated SEQ ID:10318 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55654] Another function of GAM7957 is therefore inhibition of FLJ20413 (Accession NP_060278.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20413.

[55655] FLJ20452 (Accession NP_060298.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20452 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20452 BINDING SITE, designated SEQ ID:11133, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55656] Another function of GAM7957 is therefore inhibition of FLJ20452 (Accession NP_060298.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20452.

[55657] FLJ20464 (Accession NP_060304.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20464 BINDING SITE1 and FLJ20464 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20464, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FLJ20464 BINDING SITE1 and FLJ20464 BINDING SITE2, designated SEQ ID:16904 and SEQ ID:15056 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55658] Another function of GAM7957 is therefore inhibition of FLJ20464 (Accession NP_060304.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20464.

[55659] FLJ20531 (Accession NP_060335.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20531 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20531 BINDING SITE, designated SEQ ID:7783, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55660] Another function of GAM7957 is therefore inhibition of FLJ20531 (Accession NP_060335.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20531.

[55661] FLJ20671 (Accession NP_060394.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20671 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20671, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20671 BINDING SITE, designated SEQ ID:19100, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55662] Another function of GAM7957 is therefore inhibition of FLJ20671 (Accession NP_060394.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20671.

[55663] FLJ20686 (Accession NP_060395.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20686 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20686, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20686 BINDING SITE, designated SEQ ID:2852, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55664] Another function of GAM7957 is therefore inhibition of FLJ20686 (Accession NP_060395.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20686.

[55665] FLJ20694 (Accession NP_060398.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20694 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20694, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20694 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55666] Another function of GAM7957 is therefore inhibition of FLJ20694 (Accession NP_060398.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20694.

[55667] FLJ20700 (Accession NP_060402.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20700 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20700, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20700 BINDING SITE, designated SEQ ID:16856, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55668] Another function of GAM7957 is therefore inhibition of FLJ20700 (Accession NP_060402.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20700.

[55669] FLJ20802 (Accession NP_060429.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20802 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20802, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ20802 BINDING SITE, designated SEQ ID:4334, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55670] Another function of GAM7957 is therefore inhibition of FLJ20802 (Accession NP_060429.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20802.

[55671] FLJ20825 (Accession NP_060432.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20825 BINDING SITE1 through FLJ20825 BINDING SITE5 are target binding sites found in untranslated regions of mRNA encoded by FLJ20825, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20825 BINDING SITE1 through FLJ20825 BINDING SITE5, designated SEQ ID:6889, SEQ ID:8889, SEQ ID:6040, SEQ ID:805 and SEQ ID:19263 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55672] Another function of GAM7957 is therefore inhibition of FLJ20825 (Accession NP_060432.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20825.

[55673] FLJ20909 (Accession NP_078969.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20909 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20909 BINDING SITE, designated SEQ ID:18412, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55674] Another function of GAM7957 is therefore inhibition of FLJ20909 (Accession NP_078969.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20909.

[55675] FLJ20972 (Accession NP_079306.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ20972 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20972 BINDING SITE, designated SEQ ID:13690, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55676] Another function of GAM7957 is therefore inhibition of FLJ20972 (Accession NP_079306.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20972.

[55677] FLJ21135 (Accession NP_079142.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21135 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ21135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21135 BINDING SITE, designated SEQ ID:14182, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55678] Another function of GAM7957 is therefore inhibition of FLJ21135 (Accession NP_079142.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ21135.

[55679] FLJ21144 (Accession NP_073611.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21144 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ21144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21144 BINDING SITE, designated SEQ ID:3619, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55680] Another function of GAM7957 is therefore inhibition of FLJ21144 (Accession NP_073611.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21144.

[55681] FLJ21240 (Accession NP_079123.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21240 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ21240, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ21240 BINDING SITE, designated SEQ ID:16290, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55682] Another function of GAM7957 is therefore inhibition of FLJ21240 (Accession NP_079123.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21240.

[55683] FLJ21603 (Accession NP_079038.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21603 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ21603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21603 BINDING SITE, designated SEQ ID:13858, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55684] Another function of GAM7957 is therefore inhibition of FLJ21603 (Accession NP_079038.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21603.

[55685] FLJ21657 (Accession NP_071928.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21657 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ21657, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21657 BINDING SITE, designated SEQ ID:13061, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55686] Another function of GAM7957 is therefore inhibition of FLJ21657 (Accession NP_071928.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21657.

[55687] FLJ21673 (Accession NP_112160.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21673 BINDING SITE1 and FLJ21673 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ21673, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21673 BINDING SITE1 and

FLJ21673 BINDING SITE2, designated SEQ ID:19796 and SEQ ID:16286 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55688] Another function of GAM7957 is therefore inhibition of FLJ21673 (Accession NP_112160.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21673.

[55689] FLJ21687 (Accession NP_079135.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21687 BINDING SITE1 and FLJ21687 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ21687, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21687 BINDING SITE1 and FLJ21687 BINDING SITE2, designated SEQ ID:19018 and SEQ ID:17803 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55690] Another function of GAM7957 is therefore inhibition of FLJ21687 (Accession NP_079135.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21687.

[55691] FLJ21777 (Accession NP_115585.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21777 BINDING SITE1 and FLJ21777 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ21777, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21777 BINDING SITE1 and FLJ21777 BINDING SITE2, designated SEQ ID:627 and SEQ ID:11407 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55692] Another function of GAM7957 is therefore inhibition of FLJ21777 (Accession NP_115585.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21777.

[55693] FLJ21870 (Accession NP_075392.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ21870 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ21870, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21870 BINDING SITE, designated SEQ ID:6605, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55694] Another function of GAM7957 is therefore inhibition of FLJ21870 (Accession NP_075392.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21870.

[55695] FLJ22054 (Accession NP_078837.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ22054 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ22054, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22054 BINDING SITE, designated SEQ ID:17423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55696] Another function of GAM7957 is therefore inhibition of

FLJ22054 (Accession NP_078837.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22054.

[55697] FLJ22173 (Accession NP_079317.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ22173 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ22173, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22173 BINDING SITE, designated SEQ ID:17804, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55698] Another function of GAM7957 is therefore inhibition of FLJ22173 (Accession NP_079317.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22173.

[55699] FLJ22313 (Accession NP_071768.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ22313 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ22313, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22313 BINDING SITE, designated SEQ ID:14789, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55700] Another function of GAM7957 is therefore inhibition of FLJ22313 (Accession NP_071768.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22313.

[55701] FLJ22415 (Accession NP_079045.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ22415 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ22415, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22415 BINDING SITE, designated SEQ ID:4373, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55702] Another function of GAM7957 is therefore inhibition of FLJ22415 (Accession NP_079045.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22415.

[55703] FLJ22692 (Accession NP_079325.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ22692 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ22692, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22692 BINDING SITE, designated SEQ ID:7048, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55704] Another function of GAM7957 is therefore inhibition of FLJ22692 (Accession NP_079325.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22692.

[55705] FLJ22814 (Accession NP_079192.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ22814 BINDING SITE1 through FLJ22814 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ22814, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22814 BINDING SITE1 through FLJ22814 BINDING SITE3, designated SEQ ID:2026, SEQ ID:8877 and SEQ ID:15203 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55706] Another function of GAM7957 is therefore inhibition of FLJ22814 (Accession NP_079192.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22814.

[55707] FLJ22965 (Accession NP_071384.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ22965 BINDING SITE1 and FLJ22965 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ22965, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22965 BINDING SITE1 and FLJ22965 BINDING SITE2, designated SEQ ID:18688 and SEQ ID:17741 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55708] Another function of GAM7957 is therefore inhibition of FLJ22965 (Accession NP_071384.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22965.

[55709] FLJ23022 (Accession NP_079327.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23022 BINDING SITE1 and FLJ23022 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ23022, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23022 BINDING SITE1 and FLJ23022 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:9765 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55710] Another function of GAM7957 is therefore inhibition of FLJ23022 (Accession NP_079327.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23022.

[55711] FLJ23040 (Accession NP_079450.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23040 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23040, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23040 BINDING SITE, designated SEQ ID:5732, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55712] Another function of GAM7957 is therefore inhibition of FLJ23040 (Accession NP_079450.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23040.

[55713] FLJ23042 (Accession NP_079433.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23042 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23042, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23042 BINDING SITE, designated SEQ ID:9948, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55714] Another function of GAM7957 is therefore inhibition of FLJ23042 (Accession NP_079433.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23042.

[55715] FLJ23185 (Accession NP_079332.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23185 BINDING SITE1 and FLJ23185 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ23185, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23185 BINDING SITE1 and FLJ23185 BINDING SITE2, designated SEQ ID:11247 and SEQ ID:10998 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55716] Another function of GAM7957 is therefore inhibition of FLJ23185 (Accession NP_079332.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ23185.

[55717] FLJ23235 (Accession NP_079219.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23235 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23235 BINDING SITE, designated SEQ ID:17838, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55718] Another function of GAM7957 is therefore inhibition of FLJ23235 (Accession NP_079219.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23235.

[55719] FLJ23322 (Accession NP_079231.3) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23322 BINDING SITE1 and FLJ23322 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ23322, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FLJ23322 BINDING SITE1 and FLJ23322 BINDING SITE2, designated SEQ ID:8548 and SEQ ID:11740 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55720] Another function of GAM7957 is therefore inhibition of FLJ23322 (Accession NP_079231.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23322.

[55721] FLJ23356 (Accession NP_115613.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23356 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23356 BINDING SITE, designated SEQ ID:2436, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55722] Another function of GAM7957 is therefore inhibition of FLJ23356 (Accession NP_115613.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ23356.

[55723] FLJ23360 (Accession NP_075564.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23360 BINDING SITE1 and FLJ23360 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ23360, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23360 BINDING SITE1 and FLJ23360 BINDING SITE2, designated SEQ ID:13066 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55724] Another function of GAM7957 is therefore inhibition of FLJ23360 (Accession NP_075564.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23360.

[55725] FLJ23436 (Accession NP_078947.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23436 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ23436, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23436 BINDING SITE, designated SEQ ID:8839, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55726] Another function of GAM7957 is therefore inhibition of FLJ23436 (Accession NP_078947.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23436.

[55727] FLJ23499 (Accession NP_073598.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23499 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23499 BINDING SITE, designated SEQ ID:4310, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55728] Another function of GAM7957 is therefore inhibition of FLJ23499 (Accession NP_073598.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23499.

[55729] FLJ23537 (Accession NP_079165.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23537 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23537, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23537 BINDING SITE, designated SEQ ID:10013, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55730] Another function of GAM7957 is therefore inhibition of FLJ23537 (Accession NP_079165.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23537.

[55731] FLJ23754 (Accession NP_689888.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23754 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23754, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23754 BINDING SITE, designated SEQ ID:13853, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55732] Another function of GAM7957 is therefore inhibition of FLJ23754 (Accession NP_689888.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23754.

[55733] FLJ23865 (Accession NP_689882.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23865 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23865 BINDING SITE, designated SEQ ID:7778, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55734] Another function of GAM7957 is therefore inhibition of FLJ23865 (Accession NP_689882.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ23865.

[55735] FLJ23878 (Accession NP_659427.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ23878 BINDING SITE1 and FLJ23878 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ23878, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23878 BINDING SITE1 and FLJ23878 BINDING SITE2, designated SEQ ID:15315 and SEQ ID:19119 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55736] Another function of GAM7957 is therefore inhibition of FLJ23878 (Accession NP_659427.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23878.

[55737] FLJ25006 (Accession NP_653211.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ25006 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ25006, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25006 BINDING SITE, designated SEQ ID:19211, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55738] Another function of GAM7957 is therefore inhibition of FLJ25006 (Accession NP_653211.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25006.

[55739] FLJ25613 (Accession NP_775865.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ25613 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ25613, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25613 BINDING SITE, designated SEQ ID:8469, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55740] Another function of GAM7957 is therefore inhibition of FLJ25613 (Accession NP_775865.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25613.

[55741] FLJ30092 (Accession NP_659420.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ30092 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30092, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30092 BINDING SITE, designated SEQ ID:6927, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55742] Another function of GAM7957 is therefore inhibition of FLJ30092 (Accession NP_659420.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30092.

[55743] FLJ30317 (Accession NP_742148.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ30317 BINDING SITE1 and FLJ30317 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ30317, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30317 BINDING SITE1 and FLJ30317 BINDING SITE2, designated SEQ ID:7121 and SEQ ID:6683 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55744] Another function of GAM7957 is therefore inhibition of FLJ30317 (Accession NP_742148.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30317.

[55745] FLJ30507 (Accession NP_694555.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ30507 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ30507, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30507 BINDING SITE, designated SEQ ID:5647, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55746] Another function of GAM7957 is therefore inhibition of

FLJ30507 (Accession NP_694555.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30507.

[55747] FLJ30594 (Accession NP_694556.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ30594 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30594, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30594 BINDING SITE, designated SEQ ID:9422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55748] Another function of GAM7957 is therefore inhibition of FLJ30594 (Accession NP_694556.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30594.

[55749] FLJ30679 (Accession NP_694562.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ30679 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30679, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30679 BINDING SITE, designated SEQ ID:8173, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55750] Another function of GAM7957 is therefore inhibition of FLJ30679 (Accession NP_694562.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30679.

[55751] FLJ30791 (Accession NP_653295.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ30791 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ30791, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30791 BINDING SITE, designated SEQ ID:7170, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55752] Another function of GAM7957 is therefore inhibition of FLJ30791 (Accession NP_653295.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30791.

[55753] FLJ30899 (Accession NP_689943.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ30899 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ30899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30899 BINDING SITE, designated SEQ ID:19054, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55754] Another function of GAM7957 is therefore inhibition of FLJ30899 (Accession NP_689943.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30899.

[55755] FLJ31034 (Accession NP_689937.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31034 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31034, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31034 BINDING SITE, designated SEQ ID:9589, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55756] Another function of GAM7957 is therefore inhibition of FLJ31034 (Accession NP_689937.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31034.

[55757] FLJ31052 (Accession NP_689591.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31052 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ31052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31052 BINDING SITE, designated SEQ ID:15521, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55758] Another function of GAM7957 is therefore inhibition of FLJ31052 (Accession NP_689591.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ31052.

[55759] FLJ31158 (Accession NP_689782.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31158 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31158, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31158 BINDING SITE, designated SEQ ID:2160, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55760] Another function of GAM7957 is therefore inhibition of FLJ31158 (Accession NP_689782.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31158.

[55761] FLJ31208 (Accession NP_694568.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31208 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31208, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ31208 BINDING SITE, designated SEQ ID:14200, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55762] Another function of GAM7957 is therefore inhibition of FLJ31208 (Accession NP_694568.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31208.

[55763] FLJ31322 (Accession NP_689600.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31322 BINDING SITE1 and FLJ31322 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ31322, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31322 BINDING SITE1 and FLJ31322 BINDING SITE2, designated SEQ ID:6650 and SEQ ID:13125 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55764] Another function of GAM7957 is therefore inhibition of FLJ31322 (Accession NP_689600.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31322.

[55765] FLJ31331 (Accession NP_689743.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31331 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31331, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31331 BINDING SITE, designated SEQ ID:9421, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55766] Another function of GAM7957 is therefore inhibition of FLJ31331 (Accession NP_689743.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31331.

[55767] FLJ31434 (Accession NP_689709.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31434 BINDING SITE1 and FLJ31434 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ31434, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31434 BINDING SITE1 and FLJ31434 BINDING SITE2, designated SEQ ID:1420 and SEQ ID:15343 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55768] Another function of GAM7957 is therefore inhibition of FLJ31434 (Accession NP_689709.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31434.

[55769] FLJ31455 (Accession NP_659401.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31455 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31455, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31455 BINDING SITE, designated SEQ ID:15977, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55770] Another function of GAM7957 is therefore inhibition of

FLJ31455 (Accession NP_659401.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31455.

[55771] FLJ31568 (Accession NP_689722.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31568 BINDING SITE1 and FLJ31568 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ31568, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31568 BINDING SITE1 and FLJ31568 BINDING SITE2, designated SEQ ID:18229 and SEQ ID:20105 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55772] Another function of GAM7957 is therefore inhibition of FLJ31568 (Accession NP_689722.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31568.

[55773] FLJ31737 (Accession NP_659421.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31737

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31737, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31737 BINDING SITE, designated SEQ ID:6645, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55774] Another function of GAM7957 is therefore inhibition of FLJ31737 (Accession NP_659421.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31737.

[55775] FLJ31819 (Accession NP_689742.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31819 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31819 BINDING SITE, designated SEQ ID:12402, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55776] Another function of GAM7957 is therefore inhibition of FLJ31819 (Accession NP_689742.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31819.

[55777] FLJ31842 (Accession NP_689700.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31842 BINDING SITE1 and FLJ31842 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ31842, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31842 BINDING SITE1 and FLJ31842 BINDING SITE2, designated SEQ ID:5671 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55778] Another function of GAM7957 is therefore inhibition of FLJ31842 (Accession NP_689700.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31842.

[55779] FLJ31846 (Accession NP_659411.1) is another GAM7957

target gene, herein designated TARGET GENE. FLJ31846 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ31846, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31846 BINDING SITE, designated SEQ ID:17941, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55780] Another function of GAM7957 is therefore inhibition of FLJ31846 (Accession NP_659411.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31846.

[55781] FLJ31882 (Accession NP_689673.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31882 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31882, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31882 BINDING SITE, designated SEQ ID:11921, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55782] Another function of GAM7957 is therefore inhibition of FLJ31882 (Accession NP_689673.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31882.

[55783] FLJ31952 (Accession NP_653283.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31952 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31952 BINDING SITE, designated SEQ ID:8772, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55784] Another function of GAM7957 is therefore inhibition of FLJ31952 (Accession NP_653283.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31952.

[55785] FLJ31958 (Accession NP_694575.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ31958

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31958, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31958 BINDING SITE, designated SEQ ID:694, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55786] Another function of GAM7957 is therefore inhibition of FLJ31958 (Accession NP_694575.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31958.

[55787] FLJ32029 (Accession NP_775853.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ32029 BINDING SITE1 through FLJ32029 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ32029, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32029 BINDING SITE1 through FLJ32029 BINDING SITE3, designated SEQ ID:19975, SEQ ID:1492 and SEQ ID:15089 respectively, to the nucleotide

sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55788] Another function of GAM7957 is therefore inhibition of FLJ32029 (Accession NP_775853.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32029.

[55789] FLJ32214 (Accession NP_689686.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ32214 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ32214, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32214 BINDING SITE, designated SEQ ID:3464, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55790] Another function of GAM7957 is therefore inhibition of FLJ32214 (Accession NP_689686.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32214.

[55791] FLJ32384 (Accession NP_653209.1) is another GAM7957

target gene, herein designated TARGET GENE. FLJ32384 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ32384, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32384 BINDING SITE, designated SEQ ID:12664, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55792] Another function of GAM7957 is therefore inhibition of FLJ32384 (Accession NP_653209.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32384.

[55793] FLJ32535 (Accession NP_689760.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ32535 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ32535, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32535 BINDING SITE, designated SEQ ID:8019, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[55794] Another function of GAM7957 is therefore inhibition of FLJ32535 (Accession NP_689760.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32535.

[55795] FLJ32915 (Accession NP_659451.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ32915 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FLJ32915, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32915 BINDING SITE, designated SEQ ID:8190, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55796] Another function of GAM7957 is therefore inhibition of FLJ32915 (Accession NP_659451.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32915.

[55797] FLJ33207 (Accession NP_848649.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ33207

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33207, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33207 BINDING SITE, designated SEQ ID:5805, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55798] Another function of GAM7957 is therefore inhibition of FLJ33207 (Accession NP_848649.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33207.

[55799] FLJ33298 (Accession NP_775907.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ33298 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33298 BINDING SITE, designated SEQ ID:4903, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55800] Another function of GAM7957 is therefore inhibition of FLJ33298 (Accession NP_775907.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33298.

[55801] FLJ33505 (Accession NP_689530.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ33505 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33505, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33505 BINDING SITE, designated SEQ ID:7314, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55802] Another function of GAM7957 is therefore inhibition of FLJ33505 (Accession NP_689530.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33505.

[55803] FLJ33610 (Accession NP_775968.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ33610 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ33610, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33610 BINDING SITE, designated SEQ ID:11488, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55804] Another function of GAM7957 is therefore inhibition of FLJ33610 (Accession NP_775968.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33610.

[55805] FLJ33674 (Accession XP_291074.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ33674 BINDING SITE1 and FLJ33674 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ33674, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33674 BINDING SITE1 and FLJ33674 BINDING SITE2, designated SEQ ID:11561 and SEQ ID:1928 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55806] Another function of GAM7957 is therefore inhibition of FLJ33674 (Accession XP_291074.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33674.

[55807] FLJ33790 (Accession NP_775854.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ33790 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33790, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33790 BINDING SITE, designated SEQ ID:12060, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55808] Another function of GAM7957 is therefore inhibition of FLJ33790 (Accession NP_775854.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33790.

[55809] FLJ33979 (Accession NP_689849.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ33979

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33979, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33979 BINDING SITE, designated SEQ ID:592, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55810] Another function of GAM7957 is therefore inhibition of FLJ33979 (Accession NP_689849.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33979.

[55811] FLJ34047 (Accession NP_775940.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ34047 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ34047, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34047 BINDING SITE, designated SEQ ID:15371, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55812] Another function of GAM7957 is therefore inhibition of FLJ34047 (Accession NP_775940.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34047.

[55813] FLJ34278 (Accession NP_775873.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ34278 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ34278, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34278 BINDING SITE, designated SEQ ID:12930, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55814] Another function of GAM7957 is therefore inhibition of FLJ34278 (Accession NP_775873.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34278.

[55815] FLJ34817 (Accession NP_689516.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ34817 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by FLJ34817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34817 BINDING SITE, designated SEQ ID:9991, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55816] Another function of GAM7957 is therefore inhibition of FLJ34817 (Accession NP_689516.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34817.

[55817] FLJ34969 (Accession XP_114353.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ34969 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ34969, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34969 BINDING SITE, designated SEQ ID:9420, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55818] Another function of GAM7957 is therefore inhibition of

FLJ34969 (Accession XP_114353.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34969.

[55819] FLJ35119 (Accession NP_787067.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ35119 BINDING SITE1 and FLJ35119 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ35119, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35119 BINDING SITE1 and FLJ35119 BINDING SITE2, designated SEQ ID:13065 and SEQ ID:4404 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55820] Another function of GAM7957 is therefore inhibition of FLJ35119 (Accession NP_787067.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35119.

[55821] FLJ35681 (Accession NP_787096.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ35681

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ35681, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35681 BINDING SITE, designated SEQ ID:13398, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55822] Another function of GAM7957 is therefore inhibition of FLJ35681 (Accession NP_787096.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35681.

[55823] FLJ35740 (Accession NP_671728.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ35740 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ35740, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35740 BINDING SITE, designated SEQ ID:7183, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55824] Another function of GAM7957 is therefore inhibition of FLJ35740 (Accession NP_671728.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35740.

[55825] FLJ35848 (Accession XP_290755.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ35848 BINDING SITE is a target binding site found in the 3` un-translated region of mRNA encoded by FLJ35848, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35848 BINDING SITE, designated SEQ ID:9398, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55826] Another function of GAM7957 is therefore inhibition of FLJ35848 (Accession XP_290755.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35848.

[55827] FLJ35936 (Accession NP_775735.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ35936 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ35936, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35936 BINDING SITE, designated SEQ ID:13467, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55828] Another function of GAM7957 is therefore inhibition of FLJ35936 (Accession NP_775735.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35936.

[55829] FLJ36812 (Accession NP_694992.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ36812 BINDING SITE1 and FLJ36812 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ36812, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36812 BINDING SITE1 and FLJ36812 BINDING SITE2, designated SEQ ID:12792 and SEQ ID:15984 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[55830] Another function of GAM7957 is therefore inhibition of FLJ36812 (Accession NP_694992.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36812.

[55831] FLJ37131 (Accession NP_775958.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ37131 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ37131, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37131 BINDING SITE, designated SEQ ID:19393, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55832] Another function of GAM7957 is therefore inhibition of FLJ37131 (Accession NP_775958.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37131.

[55833] FLJ37228 (Accession NP_787113.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ37228

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ37228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37228 BINDING SITE, designated SEQ ID:12334, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55834] Another function of GAM7957 is therefore inhibition of FLJ37228 (Accession NP_787113.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37228.

[55835] FLJ37318 (Accession NP_689799.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ37318 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ37318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37318 BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55836] Another function of GAM7957 is therefore inhibition of FLJ37318 (Accession NP_689799.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37318.

[55837] FLJ37562 (Accession NP_689622.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ37562 BINDING SITE is a target binding site found in the 3` un-translated region of mRNA encoded by FLJ37562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37562 BINDING SITE, designated SEQ ID:11700, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55838] Another function of GAM7957 is therefore inhibition of FLJ37562 (Accession NP_689622.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37562.

[55839] FLJ38359 (Accession NP_689731.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38359 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ38359, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38359 BINDING SITE, designated SEQ ID:10720, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55840] Another function of GAM7957 is therefore inhibition of FLJ38359 (Accession NP_689731.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38359.

[55841] FLJ38426 (Accession NP_775882.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38426 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ38426, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38426 BINDING SITE, designated SEQ ID:11462, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55842] Another function of GAM7957 is therefore inhibition of

FLJ38426 (Accession NP_775882.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38426.

[55843] FLJ38482 (Accession NP_689894.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38482 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ38482, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38482 BINDING SITE, designated SEQ ID:3131, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55844] Another function of GAM7957 is therefore inhibition of FLJ38482 (Accession NP_689894.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38482.

[55845] FLJ38663 (Accession NP_689482.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38663 BINDING SITE1 and FLJ38663 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by FLJ38663, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38663 BINDING SITE1 and FLJ38663 BINDING SITE2, designated SEQ ID:19910 and SEQ ID:9420 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55846] Another function of GAM7957 is therefore inhibition of FLJ38663 (Accession NP_689482.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38663.

[55847] FLJ38690 (Accession NP_848608.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38690 BINDING SITE1 through FLJ38690 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ38690, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38690 BINDING SITE1 through FLJ38690 BINDING SITE3, designated SEQ ID:15308, SEQ ID:1620 and SEQ ID:3523 respectively, to the nucleotide

sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55848] Another function of GAM7957 is therefore inhibition of FLJ38690 (Accession NP_848608.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38690.

[55849] FLJ38773 (Accession NP_848623.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38773 BINDING SITE1 through FLJ38773 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ38773, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38773 BINDING SITE1 through FLJ38773 BINDING SITE3, designated SEQ ID:18950, SEQ ID:19941 and SEQ ID:7759 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55850] Another function of GAM7957 is therefore inhibition of FLJ38773 (Accession NP_848623.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ38773.

[55851] FLJ38944 (Accession NP_689574.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38944 BINDING SITE1 and FLJ38944 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38944, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38944 BINDING SITE1 and FLJ38944 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:948 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55852] Another function of GAM7957 is therefore inhibition of FLJ38944 (Accession NP_689574.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38944.

[55853] FLJ38991 (Accession NP_776188.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ38991 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ38991, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38991 BINDING SITE, designated SEQ ID:13139, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55854] Another function of GAM7957 is therefore inhibition of FLJ38991 (Accession NP_776188.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38991.

[55855] FLJ39005 (Accession NP_848616.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ39005 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ39005, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39005 BINDING SITE, designated SEQ ID:12307, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55856] Another function of GAM7957 is therefore inhibition of FLJ39005 (Accession NP_848616.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ39005.

[55857] FLJ39369 (Accession NP_689576.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ39369 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ39369, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39369 BINDING SITE, designated SEQ ID:15223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55858] Another function of GAM7957 is therefore inhibition of FLJ39369 (Accession NP_689576.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39369.

[55859] FLJ39415 (Accession NP_775952.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ39415 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ39415, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ39415 BINDING SITE, designated SEQ ID:14355, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55860] Another function of GAM7957 is therefore inhibition of FLJ39415 (Accession NP_775952.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39415.

[55861] FLJ39441 (Accession XP_084736.6) is another GAM7957 target gene, herein designated TARGET GENE. FLJ39441 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ39441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39441 BINDING SITE, designated SEQ ID:8873, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55862] Another function of GAM7957 is therefore inhibition of FLJ39441 (Accession XP_084736.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ39441.

[55863] FLJ39653 (Accession NP_689897.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ39653 BINDING SITE1 and FLJ39653 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ39653, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39653 BINDING SITE1 and FLJ39653 BINDING SITE2, designated SEQ ID:13908 and SEQ ID:19119 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55864] Another function of GAM7957 is therefore inhibition of FLJ39653 (Accession NP_689897.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39653.

[55865] FLJ40160 (Accession NP_775755.2) is another GAM7957 target gene, herein designated TARGET GENE. FLJ40160 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ40160, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40160 BINDING SITE, designated SEQ ID:15055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55866] Another function of GAM7957 is therefore inhibition of FLJ40160 (Accession NP_775755.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40160.

[55867] FLJ40182 (Accession NP_775967.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ40182 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ40182, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40182 BINDING SITE, designated SEQ ID:9550, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55868] Another function of GAM7957 is therefore inhibition of FLJ40182 (Accession NP_775967.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ40182.

[55869] FLJ40288 (Accession NP_775953.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ40288 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ40288, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40288 BINDING SITE, designated SEQ ID:17816, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55870] Another function of GAM7957 is therefore inhibition of FLJ40288 (Accession NP_775953.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40288.

[55871] FLJ40417 (Accession NP_775921.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ40417 BINDING SITE1 and FLJ40417 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ40417, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40417 BINDING SITE1 and FLJ40417 BINDING SITE2, designated SEQ ID:631 and SEQ ID:4629 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55872] Another function of GAM7957 is therefore inhibition of FLJ40417 (Accession NP_775921.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40417.

[55873] FLJ40542 (Accession NP_848598.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ40542 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ40542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40542 BINDING SITE, designated SEQ ID:14572, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55874] Another function of GAM7957 is therefore inhibition of FLJ40542 (Accession NP_848598.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40542.

[55875] FLJ90165 (Accession NP_699169.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ90165 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ90165, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90165 BINDING SITE, designated SEQ ID:12468, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55876] Another function of GAM7957 is therefore inhibition of FLJ90165 (Accession NP_699169.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90165.

[55877] FLJ90652 (Accession NP_775889.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ90652 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ90652, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90652 BINDING SITE, designated SEQ ID:7434, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55878] Another function of GAM7957 is therefore inhibition of FLJ90652 (Accession NP_775889.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90652.

[55879] FLJ90734 (Accession NP_699206.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ90734 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ90734, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90734 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55880] Another function of GAM7957 is therefore inhibition of FLJ90734 (Accession NP_699206.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ90734.

[55881] FLJ90798 (Accession NP_699198.1) is another GAM7957 target gene, herein designated TARGET GENE. FLJ90798 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ90798, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90798 BINDING SITE, designated SEQ ID:19895, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55882] Another function of GAM7957 is therefore inhibition of FLJ90798 (Accession NP_699198.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90798.

[55883] FRSB (Accession NP_005678.2) is another GAM7957 target gene, herein designated TARGET GENE. FRSB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FRSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of FRSB BINDING SITE, designated SEQ ID:9067, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55884] Another function of GAM7957 is therefore inhibition of FRSB (Accession NP_005678.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FRSB.

[55885] Fus interacting protein (serine-arginine rich) 1 (FUSIP1, Accession NP_473357.1) is another GAM7957 target gene, herein designated TARGET GENE. FUSIP1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FUSIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUSIP1 BINDING SITE, designated SEQ ID:14886, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55886] Another function of GAM7957 is therefore inhibition of Fus interacting protein (serine-arginine rich) 1 (FUSIP1, Accession NP_473357.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with FUSIP1.

[55887] Fucosyltransferase 6 (alpha (1,3) fucosyltransferase) (FUT6, Accession NP_000141.1) is another GAM7957 target gene, herein designated TARGET GENE. FUT6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FUT6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT6 BINDING SITE, designated SEQ ID:3076, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55888] Another function of GAM7957 is therefore inhibition of Fucosyltransferase 6 (alpha (1,3) fucosyltransferase) (FUT6, Accession NP_000141.1), a gene which is involved in the biosynthesis of the e- selectin ligand, sialyl- lewis x. catalyzes the transfer of fucose from gdp- beta- fucose to alpha- 2,3 sialylated substrates. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT6.

[55889] The function of FUT6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM47.1.Frizzled homolog 2 (drosophila) (FZD2, Accession NP_001457.1) is another GAM7957 target gene, herein designated TARGET GENE. FZD2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by FZD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FZD2 BINDING SITE, designated SEQ ID:19131, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55890] Another function of GAM7957 is therefore inhibition of Frizzled homolog 2 (drosophila) (FZD2, Accession NP_001457.1), a gene which is a putative receptor with a role in transmembrane signal transmission. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FZD2.

[55891] The function of FZD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.1.Udp-n-acetyl-alpha-d-galactosamine:polypept

ide n-acetylgalactosaminyltransferase 6 (galnac-t6) (GALNT6, Accession NP_009141.1) is another GAM7957 target gene, herein designated TARGET GENE. GALNT6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GALNT6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNT6 BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55892] Another function of GAM7957 is therefore inhibition of Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 6 (galnac-t6) (GALNT6, Accession NP_009141.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT6.

[55893] Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 7 (galnac-t7) (GALNT7, Accession NP_473451.2) is another GAM7957 target gene, herein designated TARGET GENE. GALNT7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GALNT7, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNT7 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55894] Another function of GAM7957 is therefore inhibition of Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 7 (galnac-t7) (GALNT7, Accession NP_473451.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT7.

[55895] Galactose-1-phosphate uridylyltransferase (GALT, Accession NP_667342.1) is another GAM7957 target gene, herein designated TARGET GENE. GALT BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GALT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALT BINDING SITE, designated SEQ ID:14368, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55896] Another function of GAM7957 is therefore inhibition of Galactose-1-phosphate uridylyltransferase (GALT, Accession NP_667342.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALT.

[55897] Galactose-1-phosphate uridylyltransferase (GALT, Accession NP_667343.1) is another GAM7957 target gene, herein designated TARGET GENE. GALT BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GALT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALT BINDING SITE, designated SEQ ID:14368, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55898] Another function of GAM7957 is therefore inhibition of Galactose-1-phosphate uridylyltransferase (GALT, Accession NP_667343.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALT.

[55899] Growth arrest-specific 7 (GAS7, Accession NP_005881.1) is another GAM7957 target gene, herein designated TAR-

GET GENE. GAS7 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GAS7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAS7 BINDING SITE, designated SEQ ID:19102, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55900] Another function of GAM7957 is therefore inhibition of Growth arrest-specific 7 (GAS7, Accession NP_005881.1), a gene which may play a role in promoting maturation and morphological differentiation of cerebellar neurons. and therefore may be associated with Leukemias with myeloid/lymphoid (mll). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Leukemias with myeloid/lymphoid (mll), and of other diseases and clinical conditions associated with GAS7.

[55901] The function of GAS7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.GATS (Accession NP_849153.1) is another GAM7957 target gene, herein designated TARGET GENE.

GATS BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by GATS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GATS BINDING SITE, designated SEQ ID:19105, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55902] Another function of GAM7957 is therefore inhibition of GATS (Accession NP_849153.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GATS.

[55903] GBP4 (Accession NP_443173.2) is another GAM7957 target gene, herein designated TARGET GENE. GBP4 BINDING SITE1 and GBP4 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GBP4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GBP4 BINDING SITE1 and GBP4 BINDING SITE2, designated SEQ ID:4182 and SEQ ID:14599 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55904] Another function of GAM7957 is therefore inhibition of GBP4 (Accession NP_443173.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GBP4.

[55905] Glucosaminyl (n-acetyl) transferase 2, i-branching enzyme (GCNT2, Accession NP_001482.1) is another GAM7957 target gene, herein designated TARGET GENE. GCNT2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GCNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GCNT2 BINDING SITE, designated SEQ ID:9733, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55906] Another function of GAM7957 is therefore inhibition of Glucosaminyl (n-acetyl) transferase 2, i-branching enzyme (GCNT2, Accession NP_001482.1), a gene which converts linear into branched poly- n- acetyllactosaminoglycans. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GCNT2.

[55907] The function of GCNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.2. Growth differentiation factor 11 (GDF11, Accession NP_005802.1) is another GAM7957 target gene, herein designated TARGET GENE. GDF11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GDF11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GDF11 BINDING SITE, designated SEQ ID:5161, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55908] Another function of GAM7957 is therefore inhibition of Growth differentiation factor 11 (GDF11, Accession NP_005802.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GDF11.

[55909] Gamma-glutamyl carboxylase (GGCX, Accession NP_000812.2) is another GAM7957 target gene, herein designated TARGET GENE. GGCX BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by GGCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGCX BINDING SITE, designated SEQ ID:17049, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55910] Another function of GAM7957 is therefore inhibition of Gamma-glutamyl carboxylase (GGCX, Accession NP_000812.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGCX.

[55911] GL012 (Accession NP_110441.1) is another GAM7957 target gene, herein designated TARGET GENE. GL012 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GL012, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GL012 BINDING SITE, designated SEQ ID:1572, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55912] Another function of GAM7957 is therefore inhibition of

GL012 (Accession NP_110441.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GL012.

[55913] GLTP (Accession NP_057517.1) is another GAM7957 target gene, herein designated TARGET GENE. GLTP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GLTP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GLTP BINDING SITE, designated SEQ ID:17424, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55914] Another function of GAM7957 is therefore inhibition of GLTP (Accession NP_057517.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GLTP.

[55915] GNB4 (Accession NP_067642.1) is another GAM7957 target gene, herein designated TARGET GENE. GNB4 BINDING SITE1 and GNB4 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GNB4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of GNB4 BINDING SITE1 and GNB4 BINDING SITE2, designated SEQ ID:10438 and SEQ ID:16402 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55916] Another function of GAM7957 is therefore inhibition of GNB4 (Accession NP_067642.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNB4.

[55917] GNE (Accession NP_005467.1) is another GAM7957 target gene, herein designated TARGET GENE. GNE BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GNE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNE BINDING SITE, designated SEQ ID:15108, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55918] Another function of GAM7957 is therefore inhibition of GNE (Accession NP_005467.1), a gene which has roles in sialic acid biosynthesis and regulates cell surface sialylation. Accordingly, utilities of GAM7957 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with GNE.

[55919] The function of GNE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1. Guanine nucleotide binding protein (g protein), gamma 11 (GNG11, Accession NP_004117.1) is another GAM7957 target gene, herein designated TARGET GENE. GNG11 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by GNG11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNG11 BINDING SITE, designated SEQ ID:2988, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55920] Another function of GAM7957 is therefore inhibition of Guanine nucleotide binding protein (g protein), gamma 11 (GNG11, Accession NP_004117.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNG11.

[55921] GNPAT1 (Accession XP_085119.1) is another GAM7957

target gene, herein designated TARGET GENE. GNPAT1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GNPAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNPAT1 BINDING SITE, designated SEQ ID:17400, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55922] Another function of GAM7957 is therefore inhibition of GNPAT1 (Accession XP_085119.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNPAT1.

[55923] Golgi autoantigen, golgin subfamily a, 2 (GOLGA2, Accession NP_004477.2) is another GAM7957 target gene, herein designated TARGET GENE. GOLGA2 BINDING SITE1 and GOLGA2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GOLGA2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGA2 BINDING SITE1 and GOLGA2 BINDING

SITE2, designated SEQ ID:5830 and SEQ ID:6239 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55924] Another function of GAM7957 is therefore inhibition of Golgi autoantigen, golgin subfamily a, 2 (GOLGA2, Accession NP_004477.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GOLGA2.

[55925] GOLGIN-67 (Accession NP_851421.1) is another GAM7957 target gene, herein designated TARGET GENE. GOLGIN-67 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GOLGIN-67, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGIN-67 BINDING SITE, designated SEQ ID:9854, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55926] Another function of GAM7957 is therefore inhibition of GOLGIN-67 (Accession NP_851421.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

GOLGIN-67.

[55927] Glycoprotein 2 (zymogen granule membrane) (GP2, Accession NP_001493.1) is another GAM7957 target gene, herein designated TARGET GENE. GP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GP2 BINDING SITE, designated SEQ ID:3379, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55928] Another function of GAM7957 is therefore inhibition of Glycoprotein 2 (zymogen granule membrane) (GP2, Accession NP_001493.1), a gene which expresses in the secretory granule of the exocrine pancreas. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GP2.

[55929] The function of GP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Glycoprotein v (platelet) (GP5, Accession

NP_004479.1) is another GAM7957 target gene, herein designated TARGET GENE. GP5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GP5 BINDING SITE, designated SEQ ID:9421, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55930] Another function of GAM7957 is therefore inhibition of Glycoprotein v (platelet) (GP5, Accession NP_004479.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GP5.

[55931] Glycoprotein a33 (transmembrane) (GPA33, Accession NP_005805.1) is another GAM7957 target gene, herein designated TARGET GENE. GPA33 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by GPA33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPA33 BINDING SITE, designated

SEQ ID:16908, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55932] Another function of GAM7957 is therefore inhibition of Glycoprotein a33 (transmembrane) (GPA33, Accession NP_005805.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPA33.

[55933] G protein-coupled receptor 1 (GPR1, Accession NP_005270.1) is another GAM7957 target gene, herein designated TARGET GENE. GPR1 BINDING SITE1 and GPR1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GPR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR1 BINDING SITE1 and GPR1 BINDING SITE2, designated SEQ ID:10434 and SEQ ID:2031 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55934] Another function of GAM7957 is therefore inhibition of G protein-coupled receptor 1 (GPR1, Accession NP_005270.1), a gene which is an orphan receptor. Ac-

cordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR1.

[55935] The function of GPR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.GRAF (Accession NP_055886.1) is another GAM7957 target gene, herein designated TARGET GENE. GRAF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GRAF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRAF BINDING SITE, designated SEQ ID:14162, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55936] Another function of GAM7957 is therefore inhibition of GRAF (Accession NP_055886.1), a gene which is a GTPase activating protein for p21- rac and therefore may be associated with Juvenile myelomonocytic leukemia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Juvenile myelomonocytic leukemia, and of other diseases and clinical conditions associated with

GRAF.

[55937] The function of GRAF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.GREB1 (Accession NP_683701.1) is another GAM7957 target gene, herein designated TARGET GENE. GREB1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GREB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GREB1 BINDING SITE, designated SEQ ID:13343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55938] Another function of GAM7957 is therefore inhibition of GREB1 (Accession NP_683701.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GREB1.

[55939] Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) is another GAM7957 target gene, herein designated TARGET GENE. GRM6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by GRM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRM6 BINDING SITE, designated SEQ ID:9275, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55940] Another function of GAM7957 is therefore inhibition of Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRM6.

[55941] GRTP1 (Accession NP_078995.1) is another GAM7957 target gene, herein designated TARGET GENE. GRTP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GRTP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRTP1 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55942] Another function of GAM7957 is therefore inhibition of

GRTP1 (Accession NP_078995.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRTP1.

[55943] GSG2 (Accession NP_114171.1) is another GAM7957 target gene, herein designated TARGET GENE. GSG2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GSG2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSG2 BINDING SITE, designated SEQ ID:19193, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55944] Another function of GAM7957 is therefore inhibition of GSG2 (Accession NP_114171.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSG2.

[55945] General transcription factor iif, polypeptide 1, 74kda (GTF2F1, Accession NP_002087.1) is another GAM7957 target gene, herein designated TARGET GENE. GTF2F1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GTF2F1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2F1 BINDING SITE, designated SEQ ID:13402, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55946] Another function of GAM7957 is therefore inhibition of General transcription factor iif, polypeptide 1, 74kda (GTF2F1, Accession NP_002087.1), a gene which helps to recruit it to the initiation complex in collaboration with tfliib. it promotes transcription elongation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2F1.

[55947] The function of GTF2F1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Gtp binding protein 5 (putative) (GTPBP5, Accession NP_056481.1) is another GAM7957 target gene, herein designated TARGET GENE. GTPBP5 BINDING SITE1 through GTPBP5 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by GTPBP5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTPBP5 BINDING SITE1 through GTPBP5 BINDING SITE3, designated SEQ ID:2483, SEQ ID:12059 and SEQ ID:15564 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55948] Another function of GAM7957 is therefore inhibition of Gtp binding protein 5 (putative) (GTPBP5, Accession NP_056481.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTPBP5.

[55949] Granzyme h (cathepsin g-like 2, protein h-ccpx) (GZMH, Accession NP_219491.1) is another GAM7957 target gene, herein designated TARGET GENE. GZMH BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GZMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GZMH BINDING SITE, designated SEQ ID:6446, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55950] Another function of GAM7957 is therefore inhibition of

Granzyme h (cathepsin g-like 2, protein h-ccpx) (GZMH, Accession NP_219491.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GZMH.

[55951] H2-ALPHA (Accession XP_054284.3) is another GAM7957 target gene, herein designated TARGET GENE. H2-ALPHA BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by H2-ALPHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H2-ALPHA BINDING SITE, designated SEQ ID:15749, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55952] Another function of GAM7957 is therefore inhibition of H2-ALPHA (Accession XP_054284.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H2-ALPHA.

[55953] H2a histone family, member x (H2AFX, Accession NP_002096.1) is another GAM7957 target gene, herein designated TARGET GENE. H2AFX BINDING SITE is a target binding site found in the 3' untranslated region of mRNA

encoded by H2AFX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H2AFX BINDING SITE, designated SEQ ID:2926, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55954] Another function of GAM7957 is therefore inhibition of H2a histone family, member x (H2AFX, Accession NP_002096.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H2AFX.

[55955] Hbs1-like (*s. cerevisiae*) (HBS1L, Accession NP_006611.1) is another GAM7957 target gene, herein designated TARGET GENE. HBS1L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HBS1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HBS1L BINDING SITE, designated SEQ ID:12190, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55956] Another function of GAM7957 is therefore inhibition of Hbs1-like (*s. cerevisiae*) (HBS1L, Accession NP_006611.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HBS1L.

[55957] HCGIX (Accession NP_005835.2) is another GAM7957 target gene, herein designated TARGET GENE. HCGIX BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HCGIX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HCGIX BINDING SITE, designated SEQ ID:641, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55958] Another function of GAM7957 is therefore inhibition of HCGIX (Accession NP_005835.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HCGIX.

[55959] HCNGP (Accession NP_037392.1) is another GAM7957 target gene, herein designated TARGET GENE. HCNGP BINDING SITE1 and HCNGP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded

by HCNGP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HCNGP BINDING SITE1 and HCNGP BINDING SITE2, designated SEQ ID:15274 and SEQ ID:20026 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55960] Another function of GAM7957 is therefore inhibition of HCNGP (Accession NP_037392.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HCNGP.

[55961] HEMK (Accession NP_057257.1) is another GAM7957 target gene, herein designated TARGET GENE. HEMK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HEMK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEMK BINDING SITE, designated SEQ ID:9386, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55962] Another function of GAM7957 is therefore inhibition of

HEMK (Accession NP_057257.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEMK.

[55963] HES2 (Accession XP_290879.1) is another GAM7957 target gene, herein designated TARGET GENE. HES2 BINDING SITE1 through HES2 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by HES2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HES2 BINDING SITE1 through HES2 BINDING SITE3, designated SEQ ID:19032, SEQ ID:5827 and SEQ ID:15984 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55964] Another function of GAM7957 is therefore inhibition of HES2 (Accession XP_290879.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HES2.

[55965] Hairy and enhancer of split 6 (drosophila) (HES6, Accession NP_061115.2) is another GAM7957 target gene, herein designated TARGET GENE. HES6 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by HES6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HES6 BINDING SITE, designated SEQ ID:2945, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55966] Another function of GAM7957 is therefore inhibition of Hairy and enhancer of split 6 (drosophila) (HES6, Accession NP_061115.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HES6.

[55967] Herv-h ltr-associating 2 (HHLA2, Accession NP_009003.1) is another GAM7957 target gene, herein designated TARGET GENE. HHLA2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by HHLA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HHLA2 BINDING SITE, designated SEQ ID:5686, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55968] Another function of GAM7957 is therefore inhibition of Herv-h Itr-associating 2 (HHLA2, Accession NP_009003.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HHLA2.

[55969] HIC (Accession XP_041273.1) is another GAM7957 target gene, herein designated TARGET GENE. HIC BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HIC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC BINDING SITE, designated SEQ ID:19869, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55970] Another function of GAM7957 is therefore inhibition of HIC (Accession XP_041273.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC.

[55971] HIG2 (Accession NP_037464.1) is another GAM7957 target gene, herein designated TARGET GENE. HIG2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HIG2, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIG2 BINDING SITE, designated SEQ ID:2455, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55972] Another function of GAM7957 is therefore inhibition of HIG2 (Accession NP_037464.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIG2.

[55973] Huntingtin interacting protein 1 (HIP1, Accession NP_005329.2) is another GAM7957 target gene, herein designated TARGET GENE. HIP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIP1 BINDING SITE, designated SEQ ID:19132, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55974] Another function of GAM7957 is therefore inhibition of Huntingtin interacting protein 1 (HIP1, Accession

NP_005329.2), a gene which is a membrane protein and interacts with huntingtin. and therefore may be associated with Huntington disease. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Huntington disease, and of other diseases and clinical conditions associated with HIP1.

[55975] The function of HIP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Histocompatibility (minor) 13 (HM13, Accession NP_848697.1) is another GAM7957 target gene, herein designated TARGET GENE. HM13 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HM13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HM13 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55976] Another function of GAM7957 is therefore inhibition of Histocompatibility (minor) 13 (HM13, Accession NP_848697.1) . Accordingly, utilities of GAM7957 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with HM13.

[55977] High mobility group at-hook 2 (HMGA2, Accession NP_003474.1) is another GAM7957 target gene, herein designated TARGET GENE. HMGA2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HMGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGA2 BINDING SITE, designated SEQ ID:3859, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55978] Another function of GAM7957 is therefore inhibition of High mobility group at-hook 2 (HMGA2, Accession NP_003474.1), a gene which may affect transcription and cell differentiation; shares common DNA-binding motif with other HMG HMG I/Y family members. and therefore may be associated with Lipoma. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Lipoma, and of other diseases and clinical conditions associated with HMGA2.

[55979] The function of HMGA2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM203.1. Histamine receptor h1 (HRH1, Accession NP_000852.1) is another GAM7957 target gene, herein designated TARGET GENE. HRH1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HRH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRH1 BINDING SITE, designated SEQ ID:15027, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55980] Another function of GAM7957 is therefore inhibition of Histamine receptor h1 (HRH1, Accession NP_000852.1), a gene which stimulates the synthesis of inositol phosphate. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRH1.

[55981] The function of HRH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Histamine receptor h4 (HRH4, Accession

NP_067637.2) is another GAM7957 target gene, herein designated TARGET GENE. HRH4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HRH4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRH4 BINDING SITE, designated SEQ ID:16196, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55982] Another function of GAM7957 is therefore inhibition of Histamine receptor h4 (HRH4, Accession NP_067637.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRH4.

[55983] Hydroxysteroid (17-beta) dehydrogenase 7 (HSD17B7, Accession NP_057455.1) is another GAM7957 target gene, herein designated TARGET GENE. HSD17B7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSD17B7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD17B7

BINDING SITE, designated SEQ ID:16464, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55984] Another function of GAM7957 is therefore inhibition of Hydroxysteroid (17- β) dehydrogenase 7 (HSD17B7, Accession NP_057455.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD17B7.

[55985] HSH2 (Accession NP_116244.1) is another GAM7957 target gene, herein designated TARGET GENE. HSH2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSH2 BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55986] Another function of GAM7957 is therefore inhibition of HSH2 (Accession NP_116244.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSH2.

[55987] HSMPP8 (Accession XP_167894.1) is another GAM7957

target gene, herein designated TARGET GENE. HSMPP8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSMPP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSMPP8 BINDING SITE, designated SEQ ID:4558, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55988] Another function of GAM7957 is therefore inhibition of HSMPP8 (Accession XP_167894.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSMPP8.

[55989] Heat shock 70kda protein 5 (glucose-regulated protein, 78kda) (HSPA5, Accession NP_005338.1) is another GAM7957 target gene, herein designated TARGET GENE. HSPA5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSPA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPA5 BINDING SITE, designated SEQ ID:10438, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55990] Another function of GAM7957 is therefore inhibition of Heat shock 70kda protein 5 (glucose-regulated protein, 78kda) (HSPA5, Accession NP_005338.1), a gene which is involved in the folding and assembly of proteins in the endoplasmic reticulum (ER). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPA5.

[55991] The function of HSPA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.HSPC043 (Accession NP_067041.1) is another GAM7957 target gene, herein designated TARGET GENE. HSPC043 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSPC043, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC043 BINDING SITE, designated SEQ ID:12141, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55992] Another function of GAM7957 is therefore inhibition of

HSPC043 (Accession NP_067041.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC043.

[55993] Hormonally upregulated neu-associated kinase (HUNK, Accession NP_055401.1) is another GAM7957 target gene, herein designated TARGET GENE. HUNK BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HUNK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUNK BINDING SITE, designated SEQ ID:2603, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55994] Another function of GAM7957 is therefore inhibition of Hormonally upregulated neu-associated kinase (HUNK, Accession NP_055401.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUNK.

[55995] HYPK (Accession NP_057484.3) is another GAM7957 target gene, herein designated TARGET GENE. HYPK BINDING SITE is a target binding site found in the 3' untranslated

region of mRNA encoded by HYPK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HYPK BINDING SITE, designated SEQ ID:9495, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55996] Another function of GAM7957 is therefore inhibition of HYPK (Accession NP_057484.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HYPK.

[55997] Islet amyloid polypeptide (IAPP, Accession NP_000406.1) is another GAM7957 target gene, herein designated TARGET GENE. IAPP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IAPP BINDING SITE, designated SEQ ID:19057, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[55998] Another function of GAM7957 is therefore inhibition of Islet amyloid polypeptide (IAPP, Accession NP_000406.1),

a gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore may be associated with Type ii diabetes . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Type ii diabetes ., and of other diseases and clinical conditions associated with IAPP.

[55999] The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1. Interferon-induced protein with tetratricopeptide repeats 4 (IFIT4, Accession NP_001540.2) is another GAM7957 target gene, herein designated TARGET GENE. IFIT4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IFIT4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFIT4 BINDING SITE, designated SEQ ID:3297, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56000] Another function of GAM7957 is therefore inhibition of Interferon-induced protein with tetratricopeptide repeats 4 (IFIT4, Accession NP_001540.2), a gene which is an in-

terferon- induced protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IFIT4.

[56001] The function of IFIT4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Interferon (alpha, beta and omega) receptor 1 (IFNAR1, Accession NP_000620.1) is another GAM7957 target gene, herein designated TARGET GENE. IFNAR1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IFNAR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFNAR1 BINDING SITE, designated SEQ ID:7044, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56002] Another function of GAM7957 is therefore inhibition of Interferon (alpha, beta and omega) receptor 1 (IFNAR1, Accession NP_000620.1), a gene which is a receptor for interferons alpha and beta. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IFNAR1.

[56003] The function of IFNAR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Interferon gamma receptor 2 (interferon gamma transducer 1) (IFNGR2, Accession NP_005525.1) is another GAM7957 target gene, herein designated TARGET GENE. IFNGR2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by IFNGR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFNGR2 BINDING SITE, designated SEQ ID:17119, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56004] Another function of GAM7957 is therefore inhibition of Interferon gamma receptor 2 (interferon gamma transducer 1) (IFNGR2, Accession NP_005525.1), a gene which is required for signal transduction. this accessory factor is an integral part of the ifn- gamma signal transduction pathway and is likely to interact with gaf, jak1, and/or jak2. and therefore may be associated with Atypical mycobacterial infection, familial disseminated. Accordingly,

utilities of GAM7957 include diagnosis, prevention and treatment of Atypical mycobacterial infection, familial disseminated, and of other diseases and clinical conditions associated with IFNGR2.

[56005] The function of IFNGR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Inositol hexaphosphate kinase 3 (IHPK3, Accession NP_473452.1) is another GAM7957 target gene, herein designated TARGET GENE. IHPK3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by IHPK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IHPK3 BINDING SITE, designated SEQ ID:18598, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56006] Another function of GAM7957 is therefore inhibition of Inositol hexaphosphate kinase 3 (IHPK3, Accession NP_473452.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IHPK3.

[56007] Interleukin 10 (IL10, Accession NP_000563.1) is another GAM7957 target gene, herein designated TARGET GENE. IL10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL10 BINDING SITE, designated SEQ ID:8482, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56008] Another function of GAM7957 is therefore inhibition of Interleukin 10 (IL10, Accession NP_000563.1), a gene which inhibits the synthesis of a number of cytokines, including ifn- gamma, il- 2, il- 3, tnf and gm- csf produced by activated macrophages and by helper t cells. and therefore may be associated with Human immunodeficiency virus type 1, susceptibility to. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Human immunodeficiency virus type 1, susceptibility to, and of other diseases and clinical conditions associated with IL10.

[56009] The function of IL10 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM347.2. Interleukin 10 receptor, beta (IL10RB, Accession NP_000619.3) is another GAM7957 target gene, herein designated TARGET GENE. IL10RB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL10RB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL10RB BINDING SITE, designated SEQ ID:18976, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56010] Another function of GAM7957 is therefore inhibition of Interleukin 10 receptor, beta (IL10RB, Accession NP_000619.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL10RB.

[56011] Interleukin 13 receptor, alpha 1 (IL13RA1, Accession NP_001551.1) is another GAM7957 target gene, herein designated TARGET GENE. IL13RA1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL13RA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL13RA1 BINDING SITE, designated SEQ ID:11740, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56012] Another function of GAM7957 is therefore inhibition of Interleukin 13 receptor, alpha 1 (IL13RA1, Accession NP_001551.1), a gene which binds il- 13 with a low affinity. together with il- 4r- alpha can form a functional receptor for il- 13 and therefore may be associated with Asthma and athopy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Asthma and athopy, and of other diseases and clinical conditions associated with IL13RA1.

[56013] The function of IL13RA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Interleukin 17 receptor (IL17R, Accession NP_055154.3) is another GAM7957 target gene, herein designated TARGET GENE. IL17R BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL17R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL17R BINDING SITE, designated SEQ ID:11720, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56014] Another function of GAM7957 is therefore inhibition of Interleukin 17 receptor (IL17R, Accession NP_055154.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL17R.

[56015] Interleukin 18 (interferon-gamma-inducing factor) (IL18, Accession NP_001553.1) is another GAM7957 target gene, herein designated TARGET GENE. IL18 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL18 BINDING SITE, designated SEQ ID:9399, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56016] Another function of GAM7957 is therefore inhibition of Interleukin 18 (interferon-gamma-inducing factor) (IL18,

Accession NP_001553.1), a gene which augments natural killer cell activity in spleen cells and stimulates interferon gamma production in t helper type i cells. and therefore may be associated with Crohn disease. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Crohn disease, and of other diseases and clinical conditions associated with IL18.

[56017] The function of IL18 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Interleukin 1 receptor, type i (IL1R1, Accession NP_000868.1) is another GAM7957 target gene, herein designated TARGET GENE. IL1R1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL1R1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL1R1 BINDING SITE, designated SEQ ID:10406, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56018] Another function of GAM7957 is therefore inhibition of Interleukin 1 receptor, type i (IL1R1, Accession

NP_000868.1), a gene which is a receptor for interleukin-1 alpha (il-1a), beta (il-1b), and interleukin-1 receptor antagonist protein (il-1ra). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1R1.

[56019] The function of IL1R1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1. IL23R (Accession NP_653302.2) is another GAM7957 target gene, herein designated TARGET GENE. IL23R BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IL23R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL23R BINDING SITE, designated SEQ ID:9056, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56020] Another function of GAM7957 is therefore inhibition of IL23R (Accession NP_653302.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL23R.

[56021] Interleukin 28 receptor, alpha (IL28RA, Accession

NP_775087.1) is another GAM7957 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:15436, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56022] Another function of GAM7957 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775087.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[56023] Interleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) is another GAM7957 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

IL28RA BINDING SITE, designated SEQ ID:15436, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56024] Another function of GAM7957 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[56025] Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) is another GAM7957 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:15436, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56026] Another function of GAM7957 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with IL28RA.

[56027] Interleukin 6 receptor (IL6R, Accession NP_852004.1) is another GAM7957 target gene, herein designated TARGET GENE. IL6R BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by IL6R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL6R BINDING SITE, designated SEQ ID:17754, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56028] Another function of GAM7957 is therefore inhibition of Interleukin 6 receptor (IL6R, Accession NP_852004.1), a gene which is essential to the regulation of the immune response, hematopoiesis, and acute- phase reactions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL6R.

[56029] The function of IL6R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1. Interleukin 6 receptor (IL6R, Accession

NP_000556.1) is another GAM7957 target gene, herein designated TARGET GENE. IL6R BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by IL6R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL6R BINDING SITE, designated SEQ ID:17754, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56030] Another function of GAM7957 is therefore inhibition of Interleukin 6 receptor (IL6R, Accession NP_000556.1), a gene which is essential to the regulation of the immune response, hematopoiesis, and acute-phase reactions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL6R.

[56031] The function of IL6R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1. Interleukin 8 receptor, beta (IL8RB, Accession NP_001548.1) is another GAM7957 target gene, herein designated TARGET GENE. IL8RB BINDING SITE is a target

binding site found in the 3' untranslated region of mRNA encoded by IL8RB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL8RB BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56032] Another function of GAM7957 is therefore inhibition of Interleukin 8 receptor, beta (IL8RB, Accession NP_001548.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL8RB.

[56033] Inactivation escape 1 (INE1, Accession NP_003660.1) is another GAM7957 target gene, herein designated TARGET GENE. INE1 BINDING SITE1 and INE1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by INE1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INE1 BINDING SITE1 and INE1 BINDING SITE2, designated SEQ ID:18648 and SEQ ID:13712 respectively, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56034] Another function of GAM7957 is therefore inhibition of Inactivation escape 1 (INE1, Accession NP_003660.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INE1.

[56035] Inhibitor of growth family, member 2 (ING2, Accession NP_477519.1) is another GAM7957 target gene, herein designated TARGET GENE. ING2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ING2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ING2 BINDING SITE, designated SEQ ID:13415, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56036] Another function of GAM7957 is therefore inhibition of Inhibitor of growth family, member 2 (ING2, Accession NP_477519.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ING2.

[56037] Inhibin, beta c (INHBC, Accession NP_005529.1) is another GAM7957 target gene, herein designated TARGET GENE. INHBC BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by INHBC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INHBC BINDING SITE, designated SEQ ID:16412, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56038] Another function of GAM7957 is therefore inhibition of Inhibin, beta c (INHBC, Accession NP_005529.1), a gene which inhibits the secretion of follitropin by the pituitary gland. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INHBC.

[56039] The function of INHBC and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1. Inositol polyphosphate-5-phosphatase, 75kda (INPP5B, Accession XP_300739.1) is another GAM7957 target gene, herein designated TARGET GENE. INPP5B BINDING SITE1 and INPP5B BINDING SITE2 are tar-

get binding sites found in untranslated regions of mRNA encoded by INPP5B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INPP5B BINDING SITE1 and INPP5B BINDING SITE2, designated SEQ ID:16413 and SEQ ID:12792 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56040] Another function of GAM7957 is therefore inhibition of Inositol polyphosphate-5-phosphatase, 75kda (INPP5B, Accession XP_300739.1), a gene which hydrolyzes the calcium- mobilizing second messenger $\text{ins}(1,4,5)\text{p3}$. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INPP5B.

[56041] The function of INPP5B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Inositol polyphosphate-5-phosphatase, 145kda (INPP5D, Accession NP_005532.1) is another GAM7957 target gene, herein designated TARGET GENE. INPP5D BINDING SITE is a target binding site found in the

5' untranslated region of mRNA encoded by INPP5D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INPP5D BINDING SITE, designated SEQ ID:9965, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56042] Another function of GAM7957 is therefore inhibition of Inositol polyphosphate-5-phosphatase, 145kda (INPP5D, Accession NP_005532.1), a gene which hydrolyzes Ins(1,3,4,5)P₄ and PtdIns(3,4,5)P₃; contains an SH2- domain and therefore may be associated with Severe osteoporosis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Severe osteoporosis, and of other diseases and clinical conditions associated with INPP5D.

[56043] The function of INPP5D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Intracisternal a particle-promoted polypeptide (IPP, Accession NP_005888.1) is another GAM7957 target gene, herein designated TARGET GENE. IPP BINDING SITE1 and IPP BINDING SITE2 are target binding sites

found in untranslated regions of mRNA encoded by IPP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IPP BINDING SITE1 and IPP BINDING SITE2, designated SEQ ID:7118 and SEQ ID:11184 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

- [56044] Another function of GAM7957 is therefore inhibition of Intracisternal a particle-promoted polypeptide (IPP, Accession NP_005888.1), a gene which may play a role in organizing the actin cytoskeleton. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IPP.
- [56045] The function of IPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Interleukin-1 receptor-associated kinase 1 (IRAK1, Accession NP_001560.1) is another GAM7957 target gene, herein designated TARGET GENE. IRAK1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IRAK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRAK1 BINDING SITE, designated SEQ ID:12737, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56046] Another function of GAM7957 is therefore inhibition of Interleukin-1 receptor-associated kinase 1 (IRAK1, Accession NP_001560.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRAK1.

[56047] Interleukin-1 receptor-associated kinase 4 (IRAK4, Accession NP_057207.1) is another GAM7957 target gene, herein designated TARGET GENE. IRAK4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by IRAK4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRAK4 BINDING SITE, designated SEQ ID:10607, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56048] Another function of GAM7957 is therefore inhibition of Interleukin-1 receptor-associated kinase 4 (IRAK4, Acces-

sion NP_057207.1), a gene which may function as an IRAK1 kinase, triggering a cascade of phosphorylation events. and therefore may be associated with Renal tumors. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Renal tumors, and of other diseases and clinical conditions associated with IRAK4.

[56049] The function of IRAK4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Integrin, alpha d (ITGAD, Accession XP_113880.1) is another GAM7957 target gene, herein designated TARGET GENE. ITGAD BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ITGAD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGAD BINDING SITE, designated SEQ ID:5341, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56050] Another function of GAM7957 is therefore inhibition of Integrin, alpha d (ITGAD, Accession XP_113880.1) . Ac-

cordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGAD.

[56051] Integrin, alpha I (antigen cd11a (p180), lymphocyte function-associated antigen 1; alpha polypeptide) (ITGAL, Accession NP_002200.1) is another GAM7957 target gene, herein designated TARGET GENE. ITGAL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ITGAL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGAL BINDING SITE, designated SEQ ID:15224, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56052] Another function of GAM7957 is therefore inhibition of Integrin, alpha I (antigen cd11a (p180), lymphocyte function-associated antigen 1; alpha polypeptide) (ITGAL, Accession NP_002200.1), a gene which is a receptor for icam1, icam2, icam3 and icam4. it is involved in a variety of immune phenomena including leukocyte- endothelial cell interaction, cytotoxic t- cell mediated killing, and antibody dependent killing by granulocytes and monocytes.

Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGAL.

[56053] The function of ITGAL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1.Junctophilin 2 (JPH2, Accession NP_065166.2) is another GAM7957 target gene, herein designated TARGET GENE. JPH2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by JPH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JPH2 BINDING SITE, designated SEQ ID:7268, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56054] Another function of GAM7957 is therefore inhibition of Junctophilin 2 (JPH2, Accession NP_065166.2), a gene which mediates cross talk between cell surface and intracellular ion channels. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JPH2.

[56055] The function of JPH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM346.2.Kangai 1 (suppression of tumorigenicity 6, prostate; cd82 antigen (r2 leukocyte antigen, antigen detected by monoclonal and antibody ia4)) (KAI1, Accession NP_002222.1) is another GAM7957 target gene, herein designated TARGET GENE. KAI1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KAI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KAI1 BINDING SITE, designated SEQ ID:4535, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56056] Another function of GAM7957 is therefore inhibition of Kangai 1 (suppression of tumorigenicity 6, prostate; cd82 antigen (r2 leukocyte antigen, antigen detected by monoclonal and antibody ia4)) (KAI1, Accession NP_002222.1), a gene which associates with cd4 or cd8 and delivers costimulatory signals for the tcr/cd3 pathway. and therefore may be associated with Prostate cancer. Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of Prostate cancer, and of other diseases and clinical conditions associated with KAI1.

[56057] The function of KAI1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.KBRAS2 (Accession NP_060065.2) is another GAM7957 target gene, herein designated TARGET GENE. KBRAS2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KBRAS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KBRAS2 BINDING SITE, designated SEQ ID:3310, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56058] Another function of GAM7957 is therefore inhibition of KBRAS2 (Accession NP_060065.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KBRAS2.

[56059] Potassium voltage-gated channel, shaker-related subfamily, member 7 (KCNA7, Accession NP_114092.2) is another GAM7957 target gene, herein designated TARGET

GENE. KCNA7 BINDING SITE1 and KCNA7 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KCNA7, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNA7 BINDING SITE1 and KCNA7 BINDING SITE2, designated SEQ ID:15108 and SEQ ID:2483 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56060] Another function of GAM7957 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfamily, member 7 (KCNA7, Accession NP_114092.2), a gene which allows nerve cells to efficiently repolarize following an action potential. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNA7.

[56061] The function of KCNA7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Potassium voltage-gated channel, subfamily h (eag-related), member 6 (KCNH6, Accession NP_110406.1) is another GAM7957 target gene, herein

designated TARGET GENE. KCNH6 BINDING SITE1 and KCNH6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KCNH6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNH6 BINDING SITE1 and KCNH6 BINDING SITE2, designated SEQ ID:19242 and SEQ ID:18166 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56062] Another function of GAM7957 is therefore inhibition of Potassium voltage-gated channel, subfamily h (eag-related), member 6 (KCNH6, Accession NP_110406.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNH6.

[56063] Kv channel interacting protein 2 (KCNIP2, Accession NP_775286.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:14673, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56064] Another function of GAM7957 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_775286.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[56065] Kv channel interacting protein 2 (KCNIP2, Accession NP_775284.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:14673, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56066] Another function of GAM7957 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_775284.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[56067] Kv channel interacting protein 2 (KCNIP2, Accession NP_775464.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:14673, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56068] Another function of GAM7957 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_775464.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[56069] Kv channel interacting protein 2 (KCNIP2, Accession NP_775285.1) is another GAM7957 target gene, herein

designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:14673, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56070] Another function of GAM7957 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_775285.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[56071] Kv channel interacting protein 2 (KCNIP2, Accession NP_775287.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:14673, to the nu-

cleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56072] Another function of GAM7957 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_775287.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[56073] Kv channel interacting protein 2 (KCNIP2, Accession NP_775283.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:14673, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56074] Another function of GAM7957 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_775283.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[56075] Kv channel interacting protein 2 (KCNIP2, Accession NP_055406.2) is another GAM7957 target gene, herein designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:14673, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56076] Another function of GAM7957 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_055406.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[56077] Potassium inwardly-rectifying channel, subfamily j, member 14 (KCNJ14, Accession NP_733838.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNJ14 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KCNJ14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ14 BINDING SITE, designated SEQ ID:18135, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56078] Another function of GAM7957 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 14 (KCNJ14, Accession NP_733838.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ14.

[56079] Potassium inwardly-rectifying channel, subfamily j, member 5 (KCNJ5, Accession NP_000881.3) is another GAM7957 target gene, herein designated TARGET GENE. KCNJ5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KCNJ5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ5 BINDING SITE, designated SEQ ID:15224, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56080] Another function of GAM7957 is therefore inhibition of

Potassium inwardly-rectifying channel, subfamily j, member 5 (KCNJ5, Accession NP_000881.3), a gene which is a potassium inwardly-rectifying channel. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ5.

[56081] The function of KCNJ5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Potassium channel, subfamily k, member 6 (KCNK6, Accession NP_004814.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNK6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KCNK6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNK6 BINDING SITE, designated SEQ ID:2853, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56082] Another function of GAM7957 is therefore inhibition of Potassium channel, subfamily k, member 6 (KCNK6, Accession NP_004814.1), a gene which is an inward rectify-

ing potassium channel protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNK6.

[56083] The function of KCNK6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Potassium large conductance calcium-activated channel, subfamily m beta member 3 (KCNMB3, Accession NP_741981.1) is another GAM7957 target gene, herein designated TARGET GENE. KCNMB3 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KCNMB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNMB3 BINDING SITE, designated SEQ ID:7035, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56084] Another function of GAM7957 is therefore inhibition of Potassium large conductance calcium-activated channel, subfamily m beta member 3 (KCNMB3, Accession NP_741981.1), a gene which is similar to a regulatory subunit of Ca- activated potassium channel. Accordingly,

utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNMB3.

[56085] The function of KCNMB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.KIAA0125 (Accession NP_055607.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0125 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0125 BINDING SITE, designated SEQ ID:4129, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56086] Another function of GAM7957 is therefore inhibition of KIAA0125 (Accession NP_055607.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0125.

[56087] KIAA0140 (Accession NP_055476.1) is another GAM7957

target gene, herein designated TARGET GENE. KIAA0140 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0140 BINDING SITE, designated SEQ ID:1809, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56088] Another function of GAM7957 is therefore inhibition of KIAA0140 (Accession NP_055476.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0140.

[56089] KIAA0211 (Accession NP_055445.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0211 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0211 BINDING SITE, designated SEQ ID:12651, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[56090] Another function of GAM7957 is therefore inhibition of KIAA0211 (Accession NP_055445.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0211.

[56091] KIAA0237 (Accession NP_055562.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0237 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0237, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0237 BINDING SITE, designated SEQ ID:8698, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56092] Another function of GAM7957 is therefore inhibition of KIAA0237 (Accession NP_055562.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0237.

[56093] KIAA0266 (Accession NP_067677.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0266

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0266 BINDING SITE, designated SEQ ID:15976, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56094] Another function of GAM7957 is therefore inhibition of KIAA0266 (Accession NP_067677.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0266.

[56095] KIAA0276 (Accession XP_048199.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0276 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0276 BINDING SITE, designated SEQ ID:17630, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56096] Another function of GAM7957 is therefore inhibition of KIAA0276 (Accession XP_048199.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0276.

[56097] KIAA0355 (Accession NP_055501.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0355 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0355, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0355 BINDING SITE, designated SEQ ID:6039, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56098] Another function of GAM7957 is therefore inhibition of KIAA0355 (Accession NP_055501.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0355.

[56099] KIAA0397 (Accession XP_029438.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0397 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA0397, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0397 BINDING SITE, designated SEQ ID:9795, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56100] Another function of GAM7957 is therefore inhibition of KIAA0397 (Accession XP_029438.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0397.

[56101] KIAA0408 (Accession NP_055517.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0408 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0408 BINDING SITE, designated SEQ ID:11277, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56102] Another function of GAM7957 is therefore inhibition of

KIAA0408 (Accession NP_055517.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0408.

[56103] KIAA0419 (Accession NP_055526.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0419 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0419, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0419 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56104] Another function of GAM7957 is therefore inhibition of KIAA0419 (Accession NP_055526.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0419.

[56105] KIAA0427 (Accession NP_055587.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0427 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0427, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0427 BINDING SITE, designated SEQ ID:5274, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56106] Another function of GAM7957 is therefore inhibition of KIAA0427 (Accession NP_055587.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0427.

[56107] KIAA0446 (Accession XP_044155.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0446 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0446, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0446 BINDING SITE, designated SEQ ID:19849, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56108] Another function of GAM7957 is therefore inhibition of KIAA0446 (Accession XP_044155.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0446.

[56109] KIAA0449 (Accession NP_060066.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0449 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0449, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0449 BINDING SITE, designated SEQ ID:19104, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56110] Another function of GAM7957 is therefore inhibition of KIAA0449 (Accession NP_060066.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0449.

[56111] KIAA0469 (Accession NP_055666.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0469 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0469, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0469 BINDING SITE, designated SEQ ID:7582, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56112] Another function of GAM7957 is therefore inhibition of KIAA0469 (Accession NP_055666.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0469.

[56113] KIAA0471 (Accession NP_055672.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0471 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0471, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0471 BINDING SITE, designated SEQ ID:2975, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56114] Another function of GAM7957 is therefore inhibition of KIAA0471 (Accession NP_055672.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0471.

[56115] KIAA0472 (Accession XP_290898.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0472 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0472, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0472 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56116] Another function of GAM7957 is therefore inhibition of KIAA0472 (Accession XP_290898.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0472.

[56117] KIAA0475 (Accession NP_055679.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0475 BINDING SITE1 and KIAA0475 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0475, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0475 BINDING SITE1 and KIAA0475 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:11624 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56118] Another function of GAM7957 is therefore inhibition of KIAA0475 (Accession NP_055679.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0475.

[56119] KIAA0476 (Accession NP_055671.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0476 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0476, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0476 BINDING SITE, designated SEQ ID:10354, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56120] Another function of GAM7957 is therefore inhibition of KIAA0476 (Accession NP_055671.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0476.

[56121] KIAA0478 (Accession NP_055685.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0478 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0478 BINDING SITE, designated SEQ ID:18191, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56122] Another function of GAM7957 is therefore inhibition of KIAA0478 (Accession NP_055685.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0478.

[56123] KIAA0514 (Accession NP_055511.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0514 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0514, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0514 BINDING SITE, designated SEQ ID:1907, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56124] Another function of GAM7957 is therefore inhibition of KIAA0514 (Accession NP_055511.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0514.

[56125] KIAA0528 (Accession NP_055617.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0528 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0528, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0528 BINDING SITE, designated SEQ ID:4002, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56126] Another function of GAM7957 is therefore inhibition of KIAA0528 (Accession NP_055617.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0528.

[56127] KIAA0557 (Accession XP_085507.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0557 BINDING SITE1 and KIAA0557 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0557, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0557 BINDING SITE1 and KIAA0557 BINDING SITE2, designated SEQ ID:2789 and SEQ ID:2342 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56128] Another function of GAM7957 is therefore inhibition of KIAA0557 (Accession XP_085507.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0557.

[56129] KIAA0563 (Accession NP_055649.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0563 BINDING SITE1 and KIAA0563 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by KIAA0563, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0563 BINDING SITE1 and KIAA0563 BINDING SITE2, designated SEQ ID:15108 and SEQ ID:609 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56130] Another function of GAM7957 is therefore inhibition of KIAA0563 (Accession NP_055649.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0563.

[56131] KIAA0565 (Accession XP_039912.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0565 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0565, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0565 BINDING SITE, designated SEQ ID:12789, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56132] Another function of GAM7957 is therefore inhibition of KIAA0565 (Accession XP_039912.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0565.

[56133] KIAA0590 (Accession NP_055529.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0590 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0590, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0590 BINDING SITE, designated SEQ ID:9935, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56134] Another function of GAM7957 is therefore inhibition of KIAA0590 (Accession NP_055529.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0590.

[56135] KIAA0628 (Accession NP_055604.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0628 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA0628, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0628 BINDING SITE, designated SEQ ID:16922, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56136] Another function of GAM7957 is therefore inhibition of KIAA0628 (Accession NP_055604.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0628.

[56137] KIAA0645 (Accession NP_055477.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0645 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0645, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0645 BINDING SITE, designated SEQ ID:17488, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56138] Another function of GAM7957 is therefore inhibition of

KIAA0645 (Accession NP_055477.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0645.

[56139] KIAA0711 (Accession NP_055682.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0711 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0711, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0711 BINDING SITE, designated SEQ ID:6186, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56140] Another function of GAM7957 is therefore inhibition of KIAA0711 (Accession NP_055682.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0711.

[56141] KIAA0759 (Accession NP_056120.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0759 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA0759, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0759 BINDING SITE, designated SEQ ID:16933, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56142] Another function of GAM7957 is therefore inhibition of KIAA0759 (Accession NP_056120.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0759.

[56143] KIAA0773 (Accession NP_055505.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0773 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0773, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0773 BINDING SITE, designated SEQ ID:11119, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56144] Another function of GAM7957 is therefore inhibition of KIAA0773 (Accession NP_055505.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0773.

[56145] KIAA0825 (Accession XP_027906.5) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0825 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0825, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0825 BINDING SITE, designated SEQ ID:15983, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56146] Another function of GAM7957 is therefore inhibition of KIAA0825 (Accession XP_027906.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0825.

[56147] KIAA0831 (Accession NP_055739.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0831 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0831, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0831 BINDING SITE, designated SEQ ID:3413, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56148] Another function of GAM7957 is therefore inhibition of KIAA0831 (Accession NP_055739.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0831.

[56149] KIAA0872 (Accession NP_055755.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0872 BINDING SITE1 and KIAA0872 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0872, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0872 BINDING SITE1 and KIAA0872 BINDING SITE2, designated SEQ ID:4557 and SEQ ID:19196 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56150] Another function of GAM7957 is therefore inhibition of

KIAA0872 (Accession NP_055755.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0872.

[56151] KIAA0884 (Accession XP_046660.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0884 BINDING SITE1 and KIAA0884 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0884, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0884 BINDING SITE1 and KIAA0884 BINDING SITE2, designated SEQ ID:5856 and SEQ ID:3610 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56152] Another function of GAM7957 is therefore inhibition of KIAA0884 (Accession XP_046660.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0884.

[56153] KIAA0889 (Accession NP_056192.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0889

BINDING SITE1 through KIAA0889 BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KIAA0889, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0889 BINDING SITE1 through KIAA0889 BINDING SITE3, designated SEQ ID:13091, SEQ ID:13091 and SEQ ID:3264 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56154] Another function of GAM7957 is therefore inhibition of KIAA0889 (Accession NP_056192.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0889.

[56155] KIAA0889 (Accession NP_056192.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0889 BINDING SITE1 through KIAA0889 BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KIAA0889, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of KIAA0889 BINDING SITE1 through KIAA0889 BINDING SITE3, designated SEQ ID:7577, SEQ ID:12683 and SEQ ID:3136 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56156] Another function of GAM7957 is therefore inhibition of KIAA0889 (Accession NP_056192.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0889.

[56157] KIAA0907 (Accession NP_055764.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0907 BINDING SITE1 and KIAA0907 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0907, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0907 BINDING SITE1 and KIAA0907 BINDING SITE2, designated SEQ ID:11102 and SEQ ID:13066 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56158] Another function of GAM7957 is therefore inhibition of KIAA0907 (Accession NP_055764.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0907.

[56159] KIAA0924 (Accession NP_055712.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0924 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0924, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0924 BINDING SITE, designated SEQ ID:10571, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56160] Another function of GAM7957 is therefore inhibition of KIAA0924 (Accession NP_055712.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0924.

[56161] KIAA0935 (Accession XP_052620.6) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0935 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA0935, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0935 BINDING SITE, designated SEQ ID:2363, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56162] Another function of GAM7957 is therefore inhibition of KIAA0935 (Accession XP_052620.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0935.

[56163] KIAA0981 (Accession XP_028867.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA0981 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0981, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0981 BINDING SITE, designated SEQ ID:2679, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56164] Another function of GAM7957 is therefore inhibition of

KIAA0981 (Accession XP_028867.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0981.

[56165] KIAA1001 (Accession NP_055775.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1001 BINDING SITE1 through KIAA1001 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA1001, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1001 BINDING SITE1 through KIAA1001 BINDING SITE3, designated SEQ ID:19927, SEQ ID:15875 and SEQ ID:1269 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56166] Another function of GAM7957 is therefore inhibition of KIAA1001 (Accession NP_055775.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1001.

[56167] KIAA1032 (Accession XP_038604.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1032

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1032, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1032 BINDING SITE, designated SEQ ID:5109, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56168] Another function of GAM7957 is therefore inhibition of KIAA1032 (Accession XP_038604.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1032.

[56169] KIAA1036 (Accession NP_055724.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1036 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1036, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1036 BINDING SITE, designated SEQ ID:9356, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56170] Another function of GAM7957 is therefore inhibition of KIAA1036 (Accession NP_055724.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1036.

[56171] KIAA1086 (Accession XP_047610.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1086 BINDING SITE1 and KIAA1086 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1086, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1086 BINDING SITE1 and KIAA1086 BINDING SITE2, designated SEQ ID:6649 and SEQ ID:1442 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56172] Another function of GAM7957 is therefore inhibition of KIAA1086 (Accession XP_047610.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1086.

[56173] KIAA1115 (Accession NP_055746.1) is another GAM7957

target gene, herein designated TARGET GENE. KIAA1115 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1115, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1115 BINDING SITE, designated SEQ ID:6299, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56174] Another function of GAM7957 is therefore inhibition of KIAA1115 (Accession NP_055746.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1115.

[56175] KIAA1126 (Accession XP_050325.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1126 BINDING SITE1 and KIAA1126 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1126, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1126 BINDING SITE1 and KIAA1126 BINDING SITE2, designated SEQ ID:2893 and

SEQ ID:18121 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56176] Another function of GAM7957 is therefore inhibition of KIAA1126 (Accession XP_050325.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1126.

[56177] KIAA1136 (Accession XP_166110.3) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1136 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1136 BINDING SITE, designated SEQ ID:6682, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56178] Another function of GAM7957 is therefore inhibition of KIAA1136 (Accession XP_166110.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1136.

[56179] KIAA1155 (Accession XP_030864.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1155 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1155 BINDING SITE, designated SEQ ID:3204, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56180] Another function of GAM7957 is therefore inhibition of KIAA1155 (Accession XP_030864.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1155.

[56181] KIAA1164 (Accession XP_045358.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1164 BINDING SITE1 and KIAA1164 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1164, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1164 BINDING SITE1 and

KIAA1164 BINDING SITE2, designated SEQ ID:6526 and SEQ ID:6420 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56182] Another function of GAM7957 is therefore inhibition of KIAA1164 (Accession XP_045358.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1164.

[56183] KIAA1181 (Accession NP_065195.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1181 BINDING SITE1 and KIAA1181 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1181, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1181 BINDING SITE1 and KIAA1181 BINDING SITE2, designated SEQ ID:9991 and SEQ ID:16802 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56184] Another function of GAM7957 is therefore inhibition of KIAA1181 (Accession NP_065195.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1181.

[56185] KIAA1193 (Accession XP_041843.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1193 BINDING SITE1 and KIAA1193 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1193, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1193 BINDING SITE1 and KIAA1193 BINDING SITE2, designated SEQ ID:8722 and SEQ ID:8382 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56186] Another function of GAM7957 is therefore inhibition of KIAA1193 (Accession XP_041843.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1193.

[56187] KIAA1202 (Accession XP_050478.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1202 BINDING SITE1 and KIAA1202 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by KIAA1202, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1202 BINDING SITE1 and KIAA1202 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:8547 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56188] Another function of GAM7957 is therefore inhibition of KIAA1202 (Accession XP_050478.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1202.

[56189] KIAA1228 (Accession XP_036408.3) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1228 BINDING SITE1 and KIAA1228 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1228, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1228 BINDING SITE1 and KIAA1228 BINDING SITE2, designated SEQ ID:15089 and

SEQ ID:9422 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56190] Another function of GAM7957 is therefore inhibition of KIAA1228 (Accession XP_036408.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1228.

[56191] KIAA1240 (Accession XP_039676.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1240 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1240, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1240 BINDING SITE, designated SEQ ID:15329, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56192] Another function of GAM7957 is therefore inhibition of KIAA1240 (Accession XP_039676.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1240.

[56193] KIAA1270 (Accession XP_291190.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1270 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1270, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1270 BINDING SITE, designated SEQ ID:3813, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56194] Another function of GAM7957 is therefore inhibition of KIAA1270 (Accession XP_291190.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1270.

[56195] KIAA1271 (Accession XP_045472.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1271 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1271 BINDING SITE, designated SEQ ID:18088, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56196] Another function of GAM7957 is therefore inhibition of KIAA1271 (Accession XP_045472.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1271.

[56197] KIAA1276 (Accession XP_039169.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1276 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1276 BINDING SITE, designated SEQ ID:13059, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56198] Another function of GAM7957 is therefore inhibition of KIAA1276 (Accession XP_039169.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1276.

[56199] KIAA1277 (Accession XP_035114.3) is another GAM7957

target gene, herein designated TARGET GENE. KIAA1277 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1277, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1277 BINDING SITE, designated SEQ ID:3417, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56200] Another function of GAM7957 is therefore inhibition of KIAA1277 (Accession XP_035114.3). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1277.

[56201] KIAA1340 (Accession XP_044836.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1340 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1340, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1340 BINDING SITE, designated SEQ ID:3882, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[56202] Another function of GAM7957 is therefore inhibition of KIAA1340 (Accession XP_044836.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1340.

[56203] KIAA1348 (Accession XP_043826.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1348 BINDING SITE1 and KIAA1348 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1348, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1348 BINDING SITE1 and KIAA1348 BINDING SITE2, designated SEQ ID:9419 and SEQ ID:12559 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56204] Another function of GAM7957 is therefore inhibition of KIAA1348 (Accession XP_043826.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1348.

[56205] KIAA1377 (Accession XP_040708.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1377 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1377, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1377 BINDING SITE, designated SEQ ID:20104, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56206] Another function of GAM7957 is therefore inhibition of KIAA1377 (Accession XP_040708.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1377.

[56207] KIAA1399 (Accession XP_046685.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1399 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1399, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1399 BINDING SITE, designated SEQ ID:10279, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56208] Another function of GAM7957 is therefore inhibition of KIAA1399 (Accession XP_046685.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1399.

[56209] KIAA1404 (Accession NP_066363.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1404 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1404 BINDING SITE, designated SEQ ID:6419, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56210] Another function of GAM7957 is therefore inhibition of KIAA1404 (Accession NP_066363.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1404.

[56211] KIAA1423 (Accession XP_029703.1) is another GAM7957

target gene, herein designated TARGET GENE. KIAA1423 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1423 BINDING SITE, designated SEQ ID:12788, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56212] Another function of GAM7957 is therefore inhibition of KIAA1423 (Accession XP_029703.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1423.

[56213] KIAA1447 (Accession XP_290770.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1447 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1447, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1447 BINDING SITE, designated SEQ ID:10517, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[56214] Another function of GAM7957 is therefore inhibition of KIAA1447 (Accession XP_290770.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1447.

[56215] KIAA1456 (Accession XP_040100.3) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1456 BINDING SITE1 and KIAA1456 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1456, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1456 BINDING SITE1 and KIAA1456 BINDING SITE2, designated SEQ ID:18691 and SEQ ID:3412 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56216] Another function of GAM7957 is therefore inhibition of KIAA1456 (Accession XP_040100.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1456.

[56217] KIAA1473 (Accession XP_047550.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1473 BINDING SITE1 and KIAA1473 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1473, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1473 BINDING SITE1 and KIAA1473 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:5557 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56218] Another function of GAM7957 is therefore inhibition of KIAA1473 (Accession XP_047550.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1473.

[56219] KIAA1486 (Accession XP_041126.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1486 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1486, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1486 BINDING SITE, designated SEQ ID:15677, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56220] Another function of GAM7957 is therefore inhibition of KIAA1486 (Accession XP_041126.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1486.

[56221] KIAA1518 (Accession XP_170889.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1518 BINDING SITE1 through KIAA1518 BINDING SITE4 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KIAA1518, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1518 BINDING SITE1 through KIAA1518 BINDING SITE4, designated SEQ ID:18859, SEQ ID:14466, SEQ ID:10439 and SEQ ID:17403 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56222] Another function of GAM7957 is therefore inhibition of

KIAA1518 (Accession XP_170889.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1518.

[56223] KIAA1538 (Accession XP_049474.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1538 BINDING SITE1 and KIAA1538 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1538, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1538 BINDING SITE1 and KIAA1538 BINDING SITE2, designated SEQ ID:17039 and SEQ ID:5273 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56224] Another function of GAM7957 is therefore inhibition of KIAA1538 (Accession XP_049474.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1538.

[56225] KIAA1542 (Accession XP_290536.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1542

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1542 BINDING SITE, designated SEQ ID:9321, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56226] Another function of GAM7957 is therefore inhibition of KIAA1542 (Accession XP_290536.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1542.

[56227] KIAA1554 (Accession XP_290768.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1554 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1554, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1554 BINDING SITE, designated SEQ ID:16064, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56228] Another function of GAM7957 is therefore inhibition of KIAA1554 (Accession XP_290768.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1554.

[56229] KIAA1559 (Accession XP_054472.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1559 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1559, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1559 BINDING SITE, designated SEQ ID:15359, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56230] Another function of GAM7957 is therefore inhibition of KIAA1559 (Accession XP_054472.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1559.

[56231] KIAA1594 (Accession XP_050754.5) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1594 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA1594, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1594 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56232] Another function of GAM7957 is therefore inhibition of KIAA1594 (Accession XP_050754.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1594.

[56233] KIAA1614 (Accession XP_046531.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1614 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1614, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1614 BINDING SITE, designated SEQ ID:12333, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56234] Another function of GAM7957 is therefore inhibition of

KIAA1614 (Accession XP_046531.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1614.

[56235] KIAA1618 (Accession XP_290769.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1618 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1618, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1618 BINDING SITE, designated SEQ ID:17901, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56236] Another function of GAM7957 is therefore inhibition of KIAA1618 (Accession XP_290769.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1618.

[56237] KIAA1630 (Accession NP_061176.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1630 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1630, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1630 BINDING SITE, designated SEQ ID:15143, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56238] Another function of GAM7957 is therefore inhibition of KIAA1630 (Accession NP_061176.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1630.

[56239] KIAA1656 (Accession XP_038022.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1656 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1656, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1656 BINDING SITE, designated SEQ ID:7120, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56240] Another function of GAM7957 is therefore inhibition of KIAA1656 (Accession XP_038022.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1656.

[56241] KIAA1673 (Accession XP_047672.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1673 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1673 BINDING SITE, designated SEQ ID:17218, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56242] Another function of GAM7957 is therefore inhibition of KIAA1673 (Accession XP_047672.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1673.

[56243] KIAA1674 (Accession XP_290462.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1674 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1674, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1674 BINDING SITE, designated SEQ ID:10619, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56244] Another function of GAM7957 is therefore inhibition of KIAA1674 (Accession XP_290462.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1674.

[56245] KIAA1712 (Accession NP_085136.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1712 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KIAA1712, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1712 BINDING SITE, designated SEQ ID:1763, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56246] Another function of GAM7957 is therefore inhibition of KIAA1712 (Accession NP_085136.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1712.

[56247] KIAA1715 (Accession XP_042834.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1715 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1715, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1715 BINDING SITE, designated SEQ ID:2721, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56248] Another function of GAM7957 is therefore inhibition of KIAA1715 (Accession XP_042834.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1715.

[56249] KIAA1724 (Accession XP_040280.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1724 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1724, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1724 BINDING SITE, designated SEQ ID:7563, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56250] Another function of GAM7957 is therefore inhibition of KIAA1724 (Accession XP_040280.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1724.

[56251] KIAA1735 (Accession XP_290496.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1735 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1735 BINDING SITE, designated SEQ ID:10758, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56252] Another function of GAM7957 is therefore inhibition of KIAA1735 (Accession XP_290496.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1735.

[56253] KIAA1771 (Accession XP_086404.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1771 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1771, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1771 BINDING SITE, designated SEQ ID:3051, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56254] Another function of GAM7957 is therefore inhibition of KIAA1771 (Accession XP_086404.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1771.

[56255] KIAA1827 (Accession XP_290834.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1827 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1827 BINDING SITE, designated SEQ ID:13774, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56256] Another function of GAM7957 is therefore inhibition of KIAA1827 (Accession XP_290834.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1827.

[56257] KIAA1836 (Accession XP_114087.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1836 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1836 BINDING SITE, designated SEQ ID:9403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56258] Another function of GAM7957 is therefore inhibition of KIAA1836 (Accession XP_114087.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1836.

[56259] KIAA1841 (Accession XP_087056.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1841 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1841 BINDING SITE, designated SEQ ID:1419, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56260] Another function of GAM7957 is therefore inhibition of KIAA1841 (Accession XP_087056.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1841.

[56261] KIAA1856 (Accession XP_166549.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1856 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1856 BINDING SITE, designated SEQ ID:17219, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56262] Another function of GAM7957 is therefore inhibition of KIAA1856 (Accession XP_166549.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1856.

[56263] KIAA1870 (Accession NP_116277.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1870 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by KIAA1870, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1870 BINDING SITE, designated SEQ ID:9531, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56264] Another function of GAM7957 is therefore inhibition of KIAA1870 (Accession NP_116277.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1870.

[56265] KIAA1871 (Accession XP_290737.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1871 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1871, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1871 BINDING SITE, designated SEQ ID:17416, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56266] Another function of GAM7957 is therefore inhibition of KIAA1871 (Accession XP_290737.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1871.

[56267] KIAA1872 (Accession NP_149053.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1872 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1872, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1872 BINDING SITE, designated SEQ ID:16024, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56268] Another function of GAM7957 is therefore inhibition of KIAA1872 (Accession NP_149053.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1872.

[56269] KIAA1879 (Accession XP_056635.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1879 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1879, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1879 BINDING SITE, designated SEQ ID:5944, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56270] Another function of GAM7957 is therefore inhibition of KIAA1879 (Accession XP_056635.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1879.

[56271] KIAA1904 (Accession XP_056282.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1904 BINDING SITE1 and KIAA1904 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1904, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1904 BINDING SITE1 and KIAA1904 BINDING SITE2, designated SEQ ID:19541 and SEQ ID:2653 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56272] Another function of GAM7957 is therefore inhibition of KIAA1904 (Accession XP_056282.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1904.

[56273] KIAA1917 (Accession XP_290732.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1917 BINDING SITE1 through KIAA1917 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA1917, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1917 BINDING SITE1 through KIAA1917 BINDING SITE3, designated SEQ ID:19051, SEQ ID:15343 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56274] Another function of GAM7957 is therefore inhibition of KIAA1917 (Accession XP_290732.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1917.

[56275] KIAA1920 (Accession XP_085210.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1920 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1920, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1920 BINDING SITE, designated SEQ ID:10532, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56276] Another function of GAM7957 is therefore inhibition of KIAA1920 (Accession XP_085210.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1920.

[56277] KIAA1936 (Accession XP_056082.5) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1936 BINDING SITE1 through KIAA1936 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA1936, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1936 BINDING SITE1 through KIAA1936 BINDING SITE3, designated SEQ ID:14501, SEQ ID:9047 and SEQ ID:19057 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56278] Another function of GAM7957 is therefore inhibition of KIAA1936 (Accession XP_056082.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1936.

[56279] KIAA1940 (Accession XP_086981.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1940 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by KIAA1940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1940 BINDING SITE, designated SEQ ID:10268, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56280] Another function of GAM7957 is therefore inhibition of KIAA1940 (Accession XP_086981.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1940.

[56281] KIAA1941 (Accession XP_059318.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1941 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1941, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1941 BINDING SITE, designated SEQ ID:9414, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56282] Another function of GAM7957 is therefore inhibition of

KIAA1941 (Accession XP_059318.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1941.

[56283] KIAA1949 (Accession XP_300202.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:17575, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56284] Another function of GAM7957 is therefore inhibition of KIAA1949 (Accession XP_300202.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[56285] KIAA1949 (Accession XP_166376.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5' un-

translated region of multiple transcripts of mRNA encoded by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:17575, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56286] Another function of GAM7957 is therefore inhibition of KIAA1949 (Accession XP_166376.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[56287] KIAA1949 (Accession XP_300167.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1949 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KIAA1949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1949 BINDING SITE, designated SEQ ID:17575, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ

ID:297.

[56288] Another function of GAM7957 is therefore inhibition of KIAA1949 (Accession XP_300167.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1949.

[56289] KIAA1951 (Accession XP_057401.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1951 BINDING SITE1 and KIAA1951 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1951, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1951 BINDING SITE1 and KIAA1951 BINDING SITE2, designated SEQ ID:15343 and SEQ ID:13263 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56290] Another function of GAM7957 is therefore inhibition of KIAA1951 (Accession XP_057401.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1951.

[56291] KIAA1954 (Accession XP_085375.4) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1954 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1954 BINDING SITE, designated SEQ ID:11132, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56292] Another function of GAM7957 is therefore inhibition of KIAA1954 (Accession XP_085375.4). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1954.

[56293] KIAA1956 (Accession XP_085836.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1956 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1956, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1956 BINDING SITE, designated SEQ ID:4403, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56294] Another function of GAM7957 is therefore inhibition of KIAA1956 (Accession XP_085836.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1956.

[56295] KIAA1958 (Accession XP_088566.2) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1958 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1958, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1958 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56296] Another function of GAM7957 is therefore inhibition of KIAA1958 (Accession XP_088566.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1958.

[56297] KIAA1979 (Accession XP_113984.2) is another GAM7957

target gene, herein designated TARGET GENE. KIAA1979 BINDING SITE1 and KIAA1979 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1979, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1979 BINDING SITE1 and KIAA1979 BINDING SITE2, designated SEQ ID:10353 and SEQ ID:10065 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56298] Another function of GAM7957 is therefore inhibition of KIAA1979 (Accession XP_113984.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1979.

[56299] KIAA1981 (Accession XP_114000.1) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1981 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1981, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1981 BINDING SITE, designated SEQ ID:7592, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56300] Another function of GAM7957 is therefore inhibition of KIAA1981 (Accession XP_114000.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1981.

[56301] KIAA1998 (Accession XP_068710.3) is another GAM7957 target gene, herein designated TARGET GENE. KIAA1998 BINDING SITE1 and KIAA1998 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1998, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1998 BINDING SITE1 and KIAA1998 BINDING SITE2, designated SEQ ID:10487 and SEQ ID:10265 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56302] Another function of GAM7957 is therefore inhibition of KIAA1998 (Accession XP_068710.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1998.

[56303] KIF11 (Accession NP_004514.2) is another GAM7957 target gene, herein designated TARGET GENE. KIF11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF11 BINDING SITE, designated SEQ ID:5160, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56304] Another function of GAM7957 is therefore inhibition of KIF11 (Accession NP_004514.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF11.

[56305] Kinesin family member 13b (KIF13B, Accession NP_056069.1) is another GAM7957 target gene, herein designated TARGET GENE. KIF13B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF13B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of KIF13B BINDING SITE, designated SEQ ID:19613, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56306] Another function of GAM7957 is therefore inhibition of Kinesin family member 13b (KIF13B, Accession NP_056069.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF13B.

[56307] Kinesin family member 14 (KIF14, Accession NP_055690.1) is another GAM7957 target gene, herein designated TARGET GENE. KIF14 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF14 BINDING SITE, designated SEQ ID:2937, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56308] Another function of GAM7957 is therefore inhibition of Kinesin family member 14 (KIF14, Accession NP_055690.1) . Accordingly, utilities of GAM7957 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF14.

[56309] Kinesin family member 1b (KIF1B, Accession NP_055889.1) is another GAM7957 target gene, herein designated TARGET GENE. KIF1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF1B BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56310] Another function of GAM7957 is therefore inhibition of Kinesin family member 1b (KIF1B, Accession NP_055889.1), a gene which motor for anterograde transport of mitochondria. has a microtubule plus end-directed motility. and therefore is associated with Charcot-marie-tooth disease, neuronal type, a. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Charcot-marie-tooth disease, neuronal type, a, and of other diseases and clinical conditions associated with KIF1B.

[56311] The function of KIF1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Kinesin family member 3b (KIF3B, Accession NP_004789.1) is another GAM7957 target gene, herein designated TARGET GENE. KIF3B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIF3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF3B BINDING SITE, designated SEQ ID:17418, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56312] Another function of GAM7957 is therefore inhibition of Kinesin family member 3b (KIF3B, Accession NP_004789.1), a gene which is a microtubule-based anterograde translocator for membranous organelles. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF3B.

[56313] The function of KIF3B and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM72.1.Kinesin family member 5c (KIF5C, Accession NP_004513.1) is another GAM7957 target gene, herein designated TARGET GENE. KIF5C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIF5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF5C BINDING SITE, designated SEQ ID:2807, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56314] Another function of GAM7957 is therefore inhibition of Kinesin family member 5c (KIF5C, Accession NP_004513.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF5C.

[56315] KLC2L (Accession NP_660318.1) is another GAM7957 target gene, herein designated TARGET GENE. KLC2L BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KLC2L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLC2L BINDING SITE, designated SEQ ID:13397, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56316] Another function of GAM7957 is therefore inhibition of KLC2L (Accession NP_660318.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLC2L.

[56317] Killer cell lectin-like receptor subfamily g, member 1 (KLRG1, Accession NP_005801.2) is another GAM7957 target gene, herein designated TARGET GENE. KLRG1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KLRG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLRG1 BINDING SITE, designated SEQ ID:13091, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56318] Another function of GAM7957 is therefore inhibition of Killer cell lectin-like receptor subfamily g, member 1 (KLRG1, Accession NP_005801.2), a gene which plays a

role in host defense;. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLRG1.

[56319] The function of KLRG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2.Kringle containing transmembrane protein 1 (KREMEN1, Accession NP_114434.3) is another GAM7957 target gene, herein designated TARGET GENE. KREMEN1 BINDING SITE1 and KREMEN1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KREMEN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KREMEN1 BINDING SITE1 and KREMEN1 BINDING SITE2, designated SEQ ID:14776 and SEQ ID:9420 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56320] Another function of GAM7957 is therefore inhibition of Kringle containing transmembrane protein 1 (KREMEN1, Accession NP_114434.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with KREMEN1.

[56321] Kinase suppressor of ras (KSR, Accession XP_290793.1) is another GAM7957 target gene, herein designated TARGET GENE. KSR BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KSR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KSR BINDING SITE, designated SEQ ID:3327, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56322] Another function of GAM7957 is therefore inhibition of Kinase suppressor of ras (KSR, Accession XP_290793.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KSR.

[56323] Lysosomal-associated membrane protein 2 (LAMP2, Accession NP_054701.1) is another GAM7957 target gene, herein designated TARGET GENE. LAMP2 BINDING SITE1 and LAMP2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LAMP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMP2 BINDING SITE1 and LAMP2 BINDING SITE2, designated SEQ ID:10440 and SEQ ID:2602 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56324] Another function of GAM7957 is therefore inhibition of Lysosomal-associated membrane protein 2 (LAMP2, Accession NP_054701.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP2.

[56325] LANO (Accession NP_079444.1) is another GAM7957 target gene, herein designated TARGET GENE. LANO BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LANO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LANO BINDING SITE, designated SEQ ID:4084, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56326] Another function of GAM7957 is therefore inhibition of LANO (Accession NP_079444.1) . Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LANO.

[56327] LAP1B (Accession NP_056417.1) is another GAM7957 target gene, herein designated TARGET GENE. LAP1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LAP1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAP1B BINDING SITE, designated SEQ ID:948, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56328] Another function of GAM7957 is therefore inhibition of LAP1B (Accession NP_056417.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAP1B.

[56329] Lim and sh3 protein 1 (LASP1, Accession NP_006139.1) is another GAM7957 target gene, herein designated TARGET GENE. LASP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LASP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of LASP1 BINDING SITE, designated SEQ ID:9055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56330] Another function of GAM7957 is therefore inhibition of Lim and sh3 protein 1 (LASP1, Accession NP_006139.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LASP1.

[56331] Lim domain binding 3 (LDB3, Accession XP_084376.6) is another GAM7957 target gene, herein designated TARGET GENE. LDB3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LDB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LDB3 BINDING SITE, designated SEQ ID:14268, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56332] Another function of GAM7957 is therefore inhibition of Lim domain binding 3 (LDB3, Accession XP_084376.6), a gene which could play a role during mating. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with LDB3.

[56333] The function of LDB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1. Low density lipoprotein receptor (familial hypercholesterolemia) (LDLR, Accession NP_000518.1) is another GAM7957 target gene, herein designated TARGET GENE. LDLR BINDING SITE1 through LDLR BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LDLR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LDLR BINDING SITE1 through LDLR BINDING SITE3, designated SEQ ID:4260, SEQ ID:8019 and SEQ ID:4880 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56334] Another function of GAM7957 is therefore inhibition of Low density lipoprotein receptor (familial hypercholesterolemia) (LDLR, Accession NP_000518.1), a gene which also acts as a tumor suppressor. and therefore is associated with Familial hypercholesterolemia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of Familial hypercholesterolemia, and of other diseases and clinical conditions associated with LDLR.

[56335] The function of LDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1. Leptin (obesity homolog, mouse) (LEP, Accession NP_000221.1) is another GAM7957 target gene, herein designated TARGET GENE. LEP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LEP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LEP BINDING SITE, designated SEQ ID:5562, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56336] Another function of GAM7957 is therefore inhibition of Leptin (obesity homolog, mouse) (LEP, Accession NP_000221.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LEP.

[56337] Leukocyte immunoglobulin-like receptor, subfamily b (with tm and itim domains), member 1 (LILRB1, Accession

NP_006660.1) is another GAM7957 target gene, herein designated TARGET GENE. LILRB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LILRB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LILRB1 BINDING SITE, designated SEQ ID:7591, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56338] Another function of GAM7957 is therefore inhibition of Leukocyte immunoglobulin-like receptor, subfamily b (with tm and itim domains), member 1 (LILRB1, Accession NP_006660.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LILRB1.

[56339] LIM (Accession NP_006448.1) is another GAM7957 target gene, herein designated TARGET GENE. LIM BINDING SITE1 and LIM BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LIM, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LIM BINDING SITE1 and LIM BINDING SITE2, designated SEQ ID:15993 and SEQ ID:1052 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56340] Another function of GAM7957 is therefore inhibition of LIM (Accession NP_006448.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIM.

[56341] Lamin b2 (LMNB2, Accession NP_116126.2) is another GAM7957 target gene, herein designated TARGET GENE. LMNB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LMNB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LMNB2 BINDING SITE, designated SEQ ID:5883, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56342] Another function of GAM7957 is therefore inhibition of Lamin b2 (LMNB2, Accession NP_116126.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LMNB2.

[56343] Leiomodin 1 (smooth muscle) (LMOD1, Accession NP_036266.1) is another GAM7957 target gene, herein designated TARGET GENE. LMOD1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LMOD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LMOD1 BINDING SITE, designated SEQ ID:6842, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56344] Another function of GAM7957 is therefore inhibition of Leiomodin 1 (smooth muscle) (LMOD1, Accession NP_036266.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LMOD1.

[56345] Leiomodin 3 (fetal) (LMOD3, Accession XP_067529.3) is another GAM7957 target gene, herein designated TARGET GENE. LMOD3 BINDING SITE1 and LMOD3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LMOD3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of LMOD3 BINDING SITE1 and LMOD3 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:14217 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56346] Another function of GAM7957 is therefore inhibition of Leiomodrin 3 (fetal) (LMOD3, Accession XP_067529.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LMOD3.

[56347] LOC112687 (Accession XP_053145.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC112687 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC112687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112687 BINDING SITE, designated SEQ ID:7318, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56348] Another function of GAM7957 is therefore inhibition of LOC112687 (Accession XP_053145.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112687.

[56349] LOC112885 (Accession NP_612424.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC112885 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC112885, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112885 BINDING SITE, designated SEQ ID:12290, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56350] Another function of GAM7957 is therefore inhibition of LOC112885 (Accession NP_612424.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112885.

[56351] LOC114987 (Accession NP_660284.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC114987 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC114987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC114987 BINDING SITE, designated SEQ ID:9417, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56352] Another function of GAM7957 is therefore inhibition of LOC114987 (Accession NP_660284.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC114987.

[56353] LOC115004 (Accession XP_291162.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC115004 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC115004, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115004 BINDING SITE, designated SEQ ID:9418, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56354] Another function of GAM7957 is therefore inhibition of LOC115004 (Accession XP_291162.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115004.

[56355] LOC115129 (Accession XP_055292.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC115129 BINDING SITE1 through LOC115129 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC115129, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115129 BINDING SITE1 through LOC115129 BINDING SITE3, designated SEQ ID:1418, SEQ ID:1147 and SEQ ID:9914 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56356] Another function of GAM7957 is therefore inhibition of LOC115129 (Accession XP_055292.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115129.

[56357] LOC115704 (Accession NP_660288.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC115704 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC115704, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115704 BINDING SITE, designated SEQ ID:13386, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56358] Another function of GAM7957 is therefore inhibition of LOC115704 (Accession NP_660288.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115704.

[56359] LOC116143 (Accession NP_612467.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC116143 BINDING SITE1 and LOC116143 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC116143, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116143

BINDING SITE1 and LOC116143 BINDING SITE2, designated SEQ ID:3378 and SEQ ID:9421 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56360] Another function of GAM7957 is therefore inhibition of LOC116143 (Accession NP_612467.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116143.

[56361] LOC116228 (Accession XP_300752.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC116228 BINDING SITE1 and LOC116228 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC116228, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116228 BINDING SITE1 and LOC116228 BINDING SITE2, designated SEQ ID:1671 and SEQ ID:12210 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56362] Another function of GAM7957 is therefore inhibition of LOC116228 (Accession XP_300752.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116228.

[56363] LOC116236 (Accession XP_057674.5) is another GAM7957 target gene, herein designated TARGET GENE. LOC116236 BINDING SITE1 and LOC116236 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC116236, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116236 BINDING SITE1 and LOC116236 BINDING SITE2, designated SEQ ID:2487 and SEQ ID:18886 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56364] Another function of GAM7957 is therefore inhibition of LOC116236 (Accession XP_057674.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116236.

[56365] LOC116349 (Accession XP_057993.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC116349 BINDING SITE1 and LOC116349 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC116349, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116349 BINDING SITE1 and LOC116349 BINDING SITE2, designated SEQ ID:10572 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56366] Another function of GAM7957 is therefore inhibition of LOC116349 (Accession XP_057993.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116349.

[56367] LOC118709 (Accession XP_058338.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC118709 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC118709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118709 BINDING SITE, designated SEQ ID:11340, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56368] Another function of GAM7957 is therefore inhibition of LOC118709 (Accession XP_058338.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118709.

[56369] LOC120224 (Accession NP_620143.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC120224 BINDING SITE1 and LOC120224 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC120224, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC120224 BINDING SITE1 and LOC120224 BINDING SITE2, designated SEQ ID:10567 and SEQ ID:20099 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56370] Another function of GAM7957 is therefore inhibition of LOC120224 (Accession NP_620143.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC120224.

[56371] LOC120406 (Accession XP_061976.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC120406 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC120406, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC120406 BINDING SITE, designated SEQ ID:10342, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56372] Another function of GAM7957 is therefore inhibition of LOC120406 (Accession XP_061976.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC120406.

[56373] LOC121456 (Accession XP_062645.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC121456 BINDING SITE1 and LOC121456 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC121456, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121456 BINDING SITE1 and LOC121456 BINDING SITE2, designated SEQ ID:3524 and SEQ ID:957 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56374] Another function of GAM7957 is therefore inhibition of LOC121456 (Accession XP_062645.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121456.

[56375] LOC122704 (Accession XP_058647.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC122704 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC122704, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC122704 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56376] Another function of GAM7957 is therefore inhibition of

LOC122704 (Accession XP_058647.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC122704.

[56377] LOC123722 (Accession XP_058721.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC123722 BINDING SITE1 through LOC123722 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC123722, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC123722 BINDING SITE1 through LOC123722 BINDING SITE3, designated SEQ ID:15675, SEQ ID:13155 and SEQ ID:5759 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56378] Another function of GAM7957 is therefore inhibition of LOC123722 (Accession XP_058721.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC123722.

[56379] LOC124411 (Accession XP_058804.4) is another GAM7957 target gene, herein designated TARGET GENE.

LOC124411 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC124411, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC124411 BINDING SITE, designated SEQ ID:12083, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56380] Another function of GAM7957 is therefore inhibition of LOC124411 (Accession XP_058804.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124411.

[56381] LOC124751 (Accession XP_064298.4) is another GAM7957 target gene, herein designated TARGET GENE. LOC124751 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC124751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC124751 BINDING SITE, designated SEQ ID:12792, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56382] Another function of GAM7957 is therefore inhibition of LOC124751 (Accession XP_064298.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124751.

[56383] LOC126167 (Accession XP_058997.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC126167 BINDING SITE1 and LOC126167 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC126167, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126167 BINDING SITE1 and LOC126167 BINDING SITE2, designated SEQ ID:5860 and SEQ ID:12793 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56384] Another function of GAM7957 is therefore inhibition of LOC126167 (Accession XP_058997.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC126167.

[56385] LOC126669 (Accession XP_060121.4) is another GAM7957 target gene, herein designated TARGET GENE. LOC126669 BINDING SITE1 and LOC126669 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC126669, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126669 BINDING SITE1 and LOC126669 BINDING SITE2, designated SEQ ID:14979 and SEQ ID:6238 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56386] Another function of GAM7957 is therefore inhibition of LOC126669 (Accession XP_060121.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126669.

[56387] LOC127262 (Accession XP_072073.5) is another GAM7957 target gene, herein designated TARGET GENE. LOC127262 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC127262, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC127262 BINDING SITE, designated SEQ ID:5861, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56388] Another function of GAM7957 is therefore inhibition of LOC127262 (Accession XP_072073.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127262.

[56389] LOC130026 (Accession NP_612477.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC130026 BINDING SITE1 and LOC130026 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC130026, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130026 BINDING SITE1 and LOC130026 BINDING SITE2, designated SEQ ID:2487 and SEQ ID:3640 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56390] Another function of GAM7957 is therefore inhibition of LOC130026 (Accession NP_612477.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130026.

[56391] LOC130589 (Accession NP_620156.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC130589 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC130589, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130589 BINDING SITE, designated SEQ ID:17423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56392] Another function of GAM7957 is therefore inhibition of LOC130589 (Accession NP_620156.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130589.

[56393] LOC133926 (Accession XP_059674.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC133926 BINDING SITE1 and LOC133926 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC133926, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC133926 BINDING SITE1 and LOC133926 BINDING SITE2, designated SEQ ID:12792 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56394] Another function of GAM7957 is therefore inhibition of LOC133926 (Accession XP_059674.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC133926.

[56395] LOC134121 (Accession XP_059692.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC134121 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC134121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC134121 BINDING SITE, design-

nated SEQ ID:8199, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56396] Another function of GAM7957 is therefore inhibition of LOC134121 (Accession XP_059692.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC134121.

[56397] LOC134147 (Accession NP_620164.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC134147 BINDING SITE1 and LOC134147 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC134147, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC134147 BINDING SITE1 and LOC134147 BINDING SITE2, designated SEQ ID:1453 and SEQ ID:9760 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56398] Another function of GAM7957 is therefore inhibition of LOC134147 (Accession NP_620164.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC134147.

[56399] LOC136263 (Accession NP_660311.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC136263 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC136263, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC136263 BINDING SITE, designated SEQ ID:15223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56400] Another function of GAM7957 is therefore inhibition of LOC136263 (Accession NP_660311.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC136263.

[56401] LOC138428 (Accession XP_059972.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC138428 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC138428, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC138428 BINDING SITE, designated SEQ ID:10454, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56402] Another function of GAM7957 is therefore inhibition of LOC138428 (Accession XP_059972.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC138428.

[56403] LOC139422 (Accession XP_066687.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC139422 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC139422, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139422 BINDING SITE, designated SEQ ID:5043, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56404] Another function of GAM7957 is therefore inhibition of

LOC139422 (Accession XP_066687.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139422.

[56405] LOC139562 (Accession XP_066765.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC139562 BINDING SITE1 through LOC139562 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC139562, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139562 BINDING SITE1 through LOC139562 BINDING SITE3, designated SEQ ID:7773, SEQ ID:7063 and SEQ ID:7286 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56406] Another function of GAM7957 is therefore inhibition of LOC139562 (Accession XP_066765.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139562.

[56407] LOC142779 (Accession XP_084337.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC142779 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC142779, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142779 BINDING SITE, designated SEQ ID:5071, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56408] Another function of GAM7957 is therefore inhibition of LOC142779 (Accession XP_084337.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142779.

[56409] LOC142826 (Accession XP_084355.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC142826 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC142826, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142826 BINDING SITE, designated SEQ ID:15983, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56410] Another function of GAM7957 is therefore inhibition of LOC142826 (Accession XP_084355.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142826.

[56411] LOC142948 (Accession XP_096364.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC142948 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC142948, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142948 BINDING SITE, designated SEQ ID:8865, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56412] Another function of GAM7957 is therefore inhibition of LOC142948 (Accession XP_096364.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142948.

[56413] LOC144481 (Accession XP_096611.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC144481 BINDING SITE1 and LOC144481 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC144481, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144481 BINDING SITE1 and LOC144481 BINDING SITE2, designated SEQ ID:1996 and SEQ ID:10867 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56414] Another function of GAM7957 is therefore inhibition of LOC144481 (Accession XP_096611.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144481.

[56415] LOC144817 (Accession XP_084972.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC144817 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC144817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144817 BINDING SITE, designated SEQ ID:12140, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56416] Another function of GAM7957 is therefore inhibition of LOC144817 (Accession XP_084972.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144817.

[56417] LOC144845 (Accession NP_612483.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC144845 BINDING SITE1 and LOC144845 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC144845, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144845 BINDING SITE1 and LOC144845 BINDING SITE2, designated SEQ ID:12559 and SEQ ID:3092 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56418] Another function of GAM7957 is therefore inhibition of

LOC144845 (Accession NP_612483.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144845.

[56419] LOC145216 (Accession XP_096730.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145216 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC145216, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145216 BINDING SITE, designated SEQ ID:10554, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56420] Another function of GAM7957 is therefore inhibition of LOC145216 (Accession XP_096730.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145216.

[56421] LOC145231 (Accession XP_096740.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145231 BINDING SITE1 through LOC145231 BINDING

SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC145231, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145231 BINDING SITE1 through LOC145231 BINDING SITE3, designated SEQ ID:16122, SEQ ID:15089 and SEQ ID:19055 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56422] Another function of GAM7957 is therefore inhibition of LOC145231 (Accession XP_096740.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145231.

[56423] LOC145387 (Accession XP_096791.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145387 BINDING SITE1 and LOC145387 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC145387, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145387

BINDING SITE1 and LOC145387 BINDING SITE2, designated SEQ ID:14786 and SEQ ID:2001 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56424] Another function of GAM7957 is therefore inhibition of LOC145387 (Accession XP_096791.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145387.

[56425] LOC145453 (Accession XP_085120.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145453 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC145453, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145453 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56426] Another function of GAM7957 is therefore inhibition of LOC145453 (Accession XP_085120.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC145453.

[56427] LOC145609 (Accession XP_096817.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145609 BINDING SITE1 and LOC145609 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC145609, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145609 BINDING SITE1 and LOC145609 BINDING SITE2, designated SEQ ID:5360 and SEQ ID:15343 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56428] Another function of GAM7957 is therefore inhibition of LOC145609 (Accession XP_096817.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145609.

[56429] LOC145663 (Accession XP_096829.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145663 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC145663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145663 BINDING SITE, designated SEQ ID:13155, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56430] Another function of GAM7957 is therefore inhibition of LOC145663 (Accession XP_096829.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145663.

[56431] LOC145693 (Accession XP_085205.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145693 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145693 BINDING SITE, designated SEQ ID:15903, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56432] Another function of GAM7957 is therefore inhibition of LOC145693 (Accession XP_085205.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145693.

[56433] LOC145757 (Accession XP_085227.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145757 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC145757, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145757 BINDING SITE, designated SEQ ID:11897, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56434] Another function of GAM7957 is therefore inhibition of LOC145757 (Accession XP_085227.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145757.

[56435] LOC145758 (Accession XP_096858.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC145758 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC145758, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145758 BINDING SITE, designated SEQ ID:6791, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56436] Another function of GAM7957 is therefore inhibition of LOC145758 (Accession XP_096858.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145758.

[56437] LOC145820 (Accession XP_085246.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC145820 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC145820, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145820 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56438] Another function of GAM7957 is therefore inhibition of LOC145820 (Accession XP_085246.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145820.

[56439] LOC146229 (Accession XP_085387.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC146229 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146229, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146229 BINDING SITE, designated SEQ ID:19900, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56440] Another function of GAM7957 is therefore inhibition of LOC146229 (Accession XP_085387.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146229.

[56441] LOC146336 (Accession XP_085421.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC146336 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146336 BINDING SITE, designated SEQ ID:18065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56442] Another function of GAM7957 is therefore inhibition of LOC146336 (Accession XP_085421.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146336.

[56443] LOC146713 (Accession XP_097071.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC146713 BINDING SITE1 and LOC146713 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC146713, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC146713 BINDING SITE1 and LOC146713 BINDING SITE2, designated SEQ ID:10438 and SEQ ID:14497 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56444] Another function of GAM7957 is therefore inhibition of LOC146713 (Accession XP_097071.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146713.

[56445] LOC146728 (Accession XP_097074.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC146728 BINDING SITE1 and LOC146728 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC146728, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146728 BINDING SITE1 and LOC146728 BINDING SITE2, designated SEQ ID:17996 and SEQ ID:9770 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56446] Another function of GAM7957 is therefore inhibition of

LOC146728 (Accession XP_097074.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146728.

[56447] LOC146756 (Accession XP_097085.5) is another GAM7957 target gene, herein designated TARGET GENE. LOC146756 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146756, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146756 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56448] Another function of GAM7957 is therefore inhibition of LOC146756 (Accession XP_097085.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146756.

[56449] LOC146895 (Accession XP_097120.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC146895 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC146895, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146895 BINDING SITE, designated SEQ ID:4338, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56450] Another function of GAM7957 is therefore inhibition of LOC146895 (Accession XP_097120.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146895.

[56451] LOC146901 (Accession XP_097121.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC146901 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146901, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146901 BINDING SITE, designated SEQ ID:1262, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[56452] Another function of GAM7957 is therefore inhibition of LOC146901 (Accession XP_097121.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146901.

[56453] LOC146958 (Accession XP_097142.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC146958 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC146958, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146958 BINDING SITE, designated SEQ ID:12758, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56454] Another function of GAM7957 is therefore inhibition of LOC146958 (Accession XP_097142.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146958.

[56455] LOC147071 (Accession XP_054031.5) is another

GAM7957 target gene, herein designated TARGET GENE. LOC147071 BINDING SITE1 and LOC147071 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147071, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147071 BINDING SITE1 and LOC147071 BINDING SITE2, designated SEQ ID:609 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56456] Another function of GAM7957 is therefore inhibition of LOC147071 (Accession XP_054031.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147071.

[56457] LOC147080 (Accession XP_097182.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC147080 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC147080, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC147080 BINDING SITE, designated SEQ ID:9281, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56458] Another function of GAM7957 is therefore inhibition of LOC147080 (Accession XP_097182.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147080.

[56459] LOC147093 (Accession XP_097184.4) is another GAM7957 target gene, herein designated TARGET GENE. LOC147093 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC147093, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147093 BINDING SITE, designated SEQ ID:6900, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56460] Another function of GAM7957 is therefore inhibition of LOC147093 (Accession XP_097184.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC147093.

[56461] LOC147645 (Accession XP_085831.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC147645 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC147645, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147645 BINDING SITE, designated SEQ ID:10707, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56462] Another function of GAM7957 is therefore inhibition of LOC147645 (Accession XP_085831.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147645.

[56463] LOC147649 (Accession XP_085830.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC147649 BINDING SITE1 and LOC147649 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147649, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147649 BINDING SITE1 and LOC147649 BINDING SITE2, designated SEQ ID:2487 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56464] Another function of GAM7957 is therefore inhibition of LOC147649 (Accession XP_085830.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147649.

[56465] LOC147669 (Accession XP_097262.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC147669 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC147669, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147669 BINDING SITE, designated SEQ ID:472, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56466] Another function of GAM7957 is therefore inhibition of LOC147669 (Accession XP_097262.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147669.

[56467] LOC147727 (Accession XP_085862.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC147727 BINDING SITE1 through LOC147727 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC147727, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147727 BINDING SITE1 through LOC147727 BINDING SITE3, designated SEQ ID:630, SEQ ID:16906 and SEQ ID:19057 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56468] Another function of GAM7957 is therefore inhibition of LOC147727 (Accession XP_085862.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147727.

[56469] LOC147791 (Accession XP_097293.2) is another

GAM7957 target gene, herein designated TARGET GENE. LOC147791 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC147791, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147791 BINDING SITE, designated SEQ ID:12969, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56470] Another function of GAM7957 is therefore inhibition of LOC147791 (Accession XP_097293.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147791.

[56471] LOC147837 (Accession NP_660319.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC147837 BINDING SITE1 and LOC147837 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147837, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147837

BINDING SITE1 and LOC147837 BINDING SITE2, designated SEQ ID:4707 and SEQ ID:18983 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56472] Another function of GAM7957 is therefore inhibition of LOC147837 (Accession NP_660319.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147837.

[56473] LOC147947 (Accession XP_085974.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC147947 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC147947, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147947 BINDING SITE, designated SEQ ID:14271, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56474] Another function of GAM7957 is therefore inhibition of LOC147947 (Accession XP_085974.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC147947.

[56475] LOC148137 (Accession NP_653293.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC148137 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC148137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148137 BINDING SITE, designated SEQ ID:10028, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56476] Another function of GAM7957 is therefore inhibition of LOC148137 (Accession NP_653293.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148137.

[56477] LOC148166 (Accession XP_086077.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC148166 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC148166, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148166 BINDING SITE, designated SEQ ID:5018, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56478] Another function of GAM7957 is therefore inhibition of LOC148166 (Accession XP_086077.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148166.

[56479] LOC148198 (Accession XP_047554.4) is another GAM7957 target gene, herein designated TARGET GENE. LOC148198 BINDING SITE1 and LOC148198 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC148198, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148198 BINDING SITE1 and LOC148198 BINDING SITE2, designated SEQ ID:10436 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56480] Another function of GAM7957 is therefore inhibition of LOC148198 (Accession XP_047554.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148198.

[56481] LOC148206 (Accession XP_086096.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC148206 BINDING SITE1 and LOC148206 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC148206, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148206 BINDING SITE1 and LOC148206 BINDING SITE2, designated SEQ ID:17263 and SEQ ID:17399 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56482] Another function of GAM7957 is therefore inhibition of LOC148206 (Accession XP_086096.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148206.

[56483] LOC148918 (Accession XP_086361.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC148918 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC148918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148918 BINDING SITE, designated SEQ ID:9014, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56484] Another function of GAM7957 is therefore inhibition of LOC148918 (Accession XP_086361.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148918.

[56485] LOC149194 (Accession XP_086458.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC149194 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC149194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149194 BINDING SITE, design-

nated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56486] Another function of GAM7957 is therefore inhibition of LOC149194 (Accession XP_086458.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149194.

[56487] LOC149271 (Accession XP_086475.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC149271 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149271 BINDING SITE, designated SEQ ID:17044, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56488] Another function of GAM7957 is therefore inhibition of LOC149271 (Accession XP_086475.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC149271.

[56489] LOC149448 (Accession XP_097642.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC149448 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149448, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149448 BINDING SITE, designated SEQ ID:13110, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56490] Another function of GAM7957 is therefore inhibition of LOC149448 (Accession XP_097642.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149448.

[56491] LOC149464 (Accession XP_097645.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC149464 BINDING SITE1 and LOC149464 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC149464, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149464 BINDING SITE1 and LOC149464 BINDING SITE2, designated SEQ ID:17317 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56492] Another function of GAM7957 is therefore inhibition of LOC149464 (Accession XP_097645.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149464.

[56493] LOC149506 (Accession XP_097661.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC149506 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149506, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149506 BINDING SITE, designated SEQ ID:6656, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56494] Another function of GAM7957 is therefore inhibition of

LOC149506 (Accession XP_097661.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149506.

[56495] LOC149672 (Accession XP_086669.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC149672 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC149672, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149672 BINDING SITE, designated SEQ ID:18837, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56496] Another function of GAM7957 is therefore inhibition of LOC149672 (Accession XP_086669.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149672.

[56497] LOC149705 (Accession XP_097711.4) is another GAM7957 target gene, herein designated TARGET GENE. LOC149705 BINDING SITE1 and LOC149705 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC149705, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149705 BINDING SITE1 and LOC149705 BINDING SITE2, designated SEQ ID:5361 and SEQ ID:6755 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56498] Another function of GAM7957 is therefore inhibition of LOC149705 (Accession XP_097711.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149705.

[56499] LOC150095 (Accession XP_097805.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC150095 BINDING SITE1 and LOC150095 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC150095, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150095 BINDING SITE1 and LOC150095 BINDING SITE2, design-

nated SEQ ID:2125 and SEQ ID:18254 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56500] Another function of GAM7957 is therefore inhibition of LOC150095 (Accession XP_097805.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150095.

[56501] LOC150150 (Accession XP_097820.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC150150 BINDING SITE1 and LOC150150 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC150150, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150150 BINDING SITE1 and LOC150150 BINDING SITE2, designated SEQ ID:2222 and SEQ ID:16255 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56502] Another function of GAM7957 is therefore inhibition of LOC150150 (Accession XP_097820.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC150150.

[56503] LOC150174 (Accession XP_086802.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC150174 BINDING SITE1 and LOC150174 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC150174, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150174 BINDING SITE1 and LOC150174 BINDING SITE2, designated SEQ ID:6243 and SEQ ID:14331 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56504] Another function of GAM7957 is therefore inhibition of LOC150174 (Accession XP_086802.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150174.

[56505] LOC150212 (Accession XP_086827.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC150212 BINDING SITE1 through LOC150212 BINDING SITE5 are target binding sites found in untranslated re-

gions of mRNA encoded by LOC150212, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150212 BINDING SITE1 through LOC150212 BINDING SITE5, designated SEQ ID:3584, SEQ ID:2979, SEQ ID:5019, SEQ ID:17190 and SEQ ID:19451 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56506] Another function of GAM7957 is therefore inhibition of LOC150212 (Accession XP_086827.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150212.

[56507] LOC150213 (Accession XP_059324.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC150213 BINDING SITE1 and LOC150213 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC150213, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150213 BINDING SITE1 and LOC150213 BINDING SITE2, design-

nated SEQ ID:14331 and SEQ ID:6243 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56508] Another function of GAM7957 is therefore inhibition of LOC150213 (Accession XP_059324.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150213.

[56509] LOC150225 (Accession XP_097870.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC150225 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC150225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150225 BINDING SITE, designated SEQ ID:9421, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56510] Another function of GAM7957 is therefore inhibition of LOC150225 (Accession XP_097870.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC150225.

[56511] LOC150271 (Accession XP_097859.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC150271 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC150271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150271 BINDING SITE, designated SEQ ID:13945, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56512] Another function of GAM7957 is therefore inhibition of LOC150271 (Accession XP_097859.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150271.

[56513] LOC150279 (Accession XP_086820.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC150279 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC150279, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150279 BINDING SITE, designated SEQ ID:6687, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56514] Another function of GAM7957 is therefore inhibition of LOC150279 (Accession XP_086820.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150279.

[56515] LOC150299 (Accession XP_097869.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC150299 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC150299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150299 BINDING SITE, designated SEQ ID:6090, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56516] Another function of GAM7957 is therefore inhibition of LOC150299 (Accession XP_097869.2) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150299.

[56517] LOC150630 (Accession XP_097931.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC150630 BINDING SITE1 and LOC150630 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC150630, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150630 BINDING SITE1 and LOC150630 BINDING SITE2, designated SEQ ID:4127 and SEQ ID:7317 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56518] Another function of GAM7957 is therefore inhibition of LOC150630 (Accession XP_097931.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150630.

[56519] LOC150933 (Accession XP_097971.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC150933 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC150933, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150933 BINDING SITE, designated SEQ ID:17018, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56520] Another function of GAM7957 is therefore inhibition of LOC150933 (Accession XP_097971.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150933.

[56521] LOC151146 (Accession XP_087106.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC151146 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC151146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151146 BINDING SITE, designated SEQ ID:20012, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[56522] Another function of GAM7957 is therefore inhibition of LOC151146 (Accession XP_087106.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151146.

[56523] LOC151194 (Accession NP_660323.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC151194 BINDING SITE1 and LOC151194 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC151194, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151194 BINDING SITE1 and LOC151194 BINDING SITE2, designated SEQ ID:9002 and SEQ ID:9420 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56524] Another function of GAM7957 is therefore inhibition of LOC151194 (Accession NP_660323.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151194.

[56525] LOC151623 (Accession XP_098096.5) is another GAM7957 target gene, herein designated TARGET GENE. LOC151623 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC151623, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151623 BINDING SITE, designated SEQ ID:5532, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56526] Another function of GAM7957 is therefore inhibition of LOC151623 (Accession XP_098096.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151623.

[56527] LOC151720 (Accession XP_087279.6) is another GAM7957 target gene, herein designated TARGET GENE. LOC151720 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC151720, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC151720 BINDING SITE, designated SEQ ID:16954, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56528] Another function of GAM7957 is therefore inhibition of LOC151720 (Accession XP_087279.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151720.

[56529] LOC152024 (Accession XP_087365.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC152024 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC152024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152024 BINDING SITE, designated SEQ ID:10971, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56530] Another function of GAM7957 is therefore inhibition of LOC152024 (Accession XP_087365.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC152024.

[56531] LOC152445 (Accession XP_098231.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC152445 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC152445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152445 BINDING SITE, designated SEQ ID:10654, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56532] Another function of GAM7957 is therefore inhibition of LOC152445 (Accession XP_098231.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152445.

[56533] LOC152627 (Accession XP_087495.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC152627 BINDING SITE1 and LOC152627 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC152627, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152627 BINDING SITE1 and LOC152627 BINDING SITE2, designated SEQ ID:19899 and SEQ ID:7628 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56534] Another function of GAM7957 is therefore inhibition of LOC152627 (Accession XP_087495.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152627.

[56535] LOC152804 (Accession XP_098266.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC152804 BINDING SITE1 and LOC152804 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC152804, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152804 BINDING SITE1 and LOC152804 BINDING SITE2, designated SEQ ID:13066 and SEQ ID:14782 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[56536] Another function of GAM7957 is therefore inhibition of LOC152804 (Accession XP_098266.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152804.

[56537] LOC152829 (Accession XP_087532.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC152829 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC152829, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152829 BINDING SITE, designated SEQ ID:11843, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56538] Another function of GAM7957 is therefore inhibition of LOC152829 (Accession XP_087532.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152829.

[56539] LOC153077 (Accession XP_098307.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC153077 BINDING SITE1 and LOC153077 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC153077, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153077 BINDING SITE1 and LOC153077 BINDING SITE2, designated SEQ ID:15345 and SEQ ID:16654 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56540] Another function of GAM7957 is therefore inhibition of LOC153077 (Accession XP_098307.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153077.

[56541] LOC153146 (Accession XP_098319.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC153146 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC153146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC153146 BINDING SITE, designated SEQ ID:13434, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56542] Another function of GAM7957 is therefore inhibition of LOC153146 (Accession XP_098319.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153146.

[56543] LOC153338 (Accession XP_098361.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC153338 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC153338, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153338 BINDING SITE, designated SEQ ID:14393, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56544] Another function of GAM7957 is therefore inhibition of LOC153338 (Accession XP_098361.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC153338.

[56545] LOC153561 (Accession XP_087708.6) is another GAM7957 target gene, herein designated TARGET GENE. LOC153561 BINDING SITE1 and LOC153561 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC153561, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153561 BINDING SITE1 and LOC153561 BINDING SITE2, designated SEQ ID:8646 and SEQ ID:8369 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56546] Another function of GAM7957 is therefore inhibition of LOC153561 (Accession XP_087708.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153561.

[56547] LOC153682 (Accession XP_098414.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC153682 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC153682, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153682 BINDING SITE, designated SEQ ID:609, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56548] Another function of GAM7957 is therefore inhibition of LOC153682 (Accession XP_098414.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153682.

[56549] LOC153711 (Accession XP_098419.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC153711 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC153711, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153711 BINDING SITE, designated SEQ ID:14924, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56550] Another function of GAM7957 is therefore inhibition of LOC153711 (Accession XP_098419.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153711.

[56551] LOC153727 (Accession XP_098422.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC153727 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC153727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153727 BINDING SITE, designated SEQ ID:20181, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56552] Another function of GAM7957 is therefore inhibition of LOC153727 (Accession XP_098422.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153727.

[56553] LOC154739 (Accession XP_098602.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC154739 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC154739, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154739 BINDING SITE, designated SEQ ID:7965, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56554] Another function of GAM7957 is therefore inhibition of LOC154739 (Accession XP_098602.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154739.

[56555] LOC154791 (Accession XP_088045.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC154791 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC154791, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154791 BINDING SITE, designated SEQ ID:2550, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56556] Another function of GAM7957 is therefore inhibition of LOC154791 (Accession XP_088045.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154791.

[56557] LOC154877 (Accession XP_098626.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC154877 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC154877, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE, designated SEQ ID:9421, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56558] Another function of GAM7957 is therefore inhibition of LOC154877 (Accession XP_098626.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877.

[56559] LOC155006 (Accession XP_088117.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC155006 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC155006, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155006 BINDING SITE, designated SEQ ID:15060, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56560] Another function of GAM7957 is therefore inhibition of LOC155006 (Accession XP_088117.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155006.

[56561] LOC155054 (Accession XP_088140.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC155054 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC155054, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC155054 BINDING SITE, designated SEQ ID:1423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56562] Another function of GAM7957 is therefore inhibition of LOC155054 (Accession XP_088140.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155054.

[56563] LOC155072 (Accession XP_098661.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC155072 BINDING SITE1 through LOC155072 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC155072, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155072 BINDING SITE1 through LOC155072 BINDING SITE3, designated SEQ ID:19036, SEQ ID:614 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56564] Another function of GAM7957 is therefore inhibition of LOC155072 (Accession XP_098661.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155072.

[56565] LOC155435 (Accession XP_088257.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC155435 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC155435, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155435 BINDING SITE, designated SEQ ID:1716, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56566] Another function of GAM7957 is therefore inhibition of LOC155435 (Accession XP_088257.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155435.

[56567] LOC157278 (Accession XP_098741.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC157278 BINDING SITE1 and LOC157278 BINDING SITE2 are target binding sites found in untranslated re-

gions of mRNA encoded by LOC157278, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157278 BINDING SITE1 and LOC157278 BINDING SITE2, designated SEQ ID:10646 and SEQ ID:15781 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56568] Another function of GAM7957 is therefore inhibition of LOC157278 (Accession XP_098741.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157278.

[56569] LOC157570 (Accession XP_088331.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC157570 BINDING SITE1 through LOC157570 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC157570, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157570 BINDING SITE1 through LOC157570 BINDING SITE3, designated SEQ ID:14946, SEQ ID:3765 and SEQ ID:13155 re-

spectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56570] Another function of GAM7957 is therefore inhibition of LOC157570 (Accession XP_088331.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157570.

[56571] LOC157657 (Accession NP_808880.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC157657 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC157657, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157657 BINDING SITE, designated SEQ ID:3676, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56572] Another function of GAM7957 is therefore inhibition of LOC157657 (Accession NP_808880.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157657.

[56573] LOC157737 (Accession XP_098819.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC157737 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC157737, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157737 BINDING SITE, designated SEQ ID:14124, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56574] Another function of GAM7957 is therefore inhibition of LOC157737 (Accession XP_098819.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157737.

[56575] LOC157813 (Accession XP_098828.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC157813 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC157813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC157813 BINDING SITE, designated SEQ ID:13066, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56576] Another function of GAM7957 is therefore inhibition of LOC157813 (Accession XP_098828.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157813.

[56577] LOC157918 (Accession XP_098842.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC157918 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC157918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157918 BINDING SITE, designated SEQ ID:4539, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56578] Another function of GAM7957 is therefore inhibition of LOC157918 (Accession XP_098842.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC157918.

[56579] LOC157919 (Accession XP_088420.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC157919 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC157919, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157919 BINDING SITE, designated SEQ ID:4539, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56580] Another function of GAM7957 is therefore inhibition of LOC157919 (Accession XP_088420.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157919.

[56581] LOC158088 (Accession XP_098872.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC158088 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC158088, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158088 BINDING SITE, designated SEQ ID:10572, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56582] Another function of GAM7957 is therefore inhibition of LOC158088 (Accession XP_098872.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158088.

[56583] LOC158160 (Accession XP_054490.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC158160 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC158160, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158160 BINDING SITE, designated SEQ ID:15220, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56584] Another function of GAM7957 is therefore inhibition of

LOC158160 (Accession XP_054490.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158160.

[56585] LOC158187 (Accession XP_098892.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC158187 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC158187, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158187 BINDING SITE, designated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56586] Another function of GAM7957 is therefore inhibition of LOC158187 (Accession XP_098892.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158187.

[56587] LOC158819 (Accession XP_098995.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC158819 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC158819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158819 BINDING SITE, designated SEQ ID:9422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56588] Another function of GAM7957 is therefore inhibition of LOC158819 (Accession XP_098995.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158819.

[56589] LOC159053 (Accession XP_099021.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC159053 BINDING SITE1 and LOC159053 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC159053, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC159053 BINDING SITE1 and LOC159053 BINDING SITE2, designated SEQ ID:13155 and SEQ ID:17424 respectively, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56590] Another function of GAM7957 is therefore inhibition of LOC159053 (Accession XP_099021.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159053.

[56591] LOC159110 (Accession XP_088753.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC159110 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC159110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC159110 BINDING SITE, designated SEQ ID:18709, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56592] Another function of GAM7957 is therefore inhibition of LOC159110 (Accession XP_088753.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159110.

[56593] LOC159176 (Accession XP_088768.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC159176 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC159176, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC159176 BINDING SITE, designated SEQ ID:17699, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56594] Another function of GAM7957 is therefore inhibition of LOC159176 (Accession XP_088768.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159176.

[56595] LOC161247 (Accession XP_090783.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC161247 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC161247, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC161247 BINDING SITE, designated SEQ ID:5801, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56596] Another function of GAM7957 is therefore inhibition of LOC161247 (Accession XP_090783.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC161247.

[56597] LOC162968 (Accession XP_091892.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC162968 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC162968, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162968 BINDING SITE, designated SEQ ID:3275, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56598] Another function of GAM7957 is therefore inhibition of LOC162968 (Accession XP_091892.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC162968.

[56599] LOC163259 (Accession XP_088769.6) is another GAM7957 target gene, herein designated TARGET GENE. LOC163259 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC163259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163259 BINDING SITE, designated SEQ ID:17144, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56600] Another function of GAM7957 is therefore inhibition of LOC163259 (Accession XP_088769.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163259.

[56601] LOC163556 (Accession XP_088979.6) is another GAM7957 target gene, herein designated TARGET GENE. LOC163556 BINDING SITE1 and LOC163556 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC163556, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163556 BINDING SITE1 and LOC163556 BINDING SITE2, designated SEQ ID:14783 and SEQ ID:11882 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56602] Another function of GAM7957 is therefore inhibition of LOC163556 (Accession XP_088979.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163556.

[56603] LOC164580 (Accession XP_104562.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC164580 BINDING SITE1 and LOC164580 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC164580, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC164580 BINDING SITE1 and LOC164580 BINDING SITE2, designated SEQ ID:12796 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[56604] Another function of GAM7957 is therefore inhibition of LOC164580 (Accession XP_104562.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164580.

[56605] LOC165324 (Accession XP_092518.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC165324 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC165324, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC165324 BINDING SITE, designated SEQ ID:7877, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56606] Another function of GAM7957 is therefore inhibition of LOC165324 (Accession XP_092518.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC165324.

[56607] LOC166449 (Accession XP_093876.5) is another

GAM7957 target gene, herein designated TARGET GENE. LOC166449 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC166449, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC166449 BINDING SITE, designated SEQ ID:14199, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56608] Another function of GAM7957 is therefore inhibition of LOC166449 (Accession XP_093876.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC166449.

[56609] LOC166522 (Accession XP_093920.5) is another GAM7957 target gene, herein designated TARGET GENE. LOC166522 BINDING SITE1 and LOC166522 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC166522, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC166522

BINDING SITE1 and LOC166522 BINDING SITE2, designated SEQ ID:15343 and SEQ ID:4880 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56610] Another function of GAM7957 is therefore inhibition of LOC166522 (Accession XP_093920.5) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC166522.

[56611] LOC170393 (Accession NP_775812.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC170393 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC170393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170393 BINDING SITE, designated SEQ ID:17945, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56612] Another function of GAM7957 is therefore inhibition of LOC170393 (Accession NP_775812.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC170393.

[56613] LOC170394 (Accession XP_096329.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC170394 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC170394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170394 BINDING SITE, designated SEQ ID:4679, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56614] Another function of GAM7957 is therefore inhibition of LOC170394 (Accession XP_096329.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170394.

[56615] LOC196214 (Accession XP_116897.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC196214 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC196214, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196214 BINDING SITE, designated SEQ ID:16370, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56616] Another function of GAM7957 is therefore inhibition of LOC196214 (Accession XP_116897.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196214.

[56617] LOC196540 (Accession XP_116933.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC196540 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC196540, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196540 BINDING SITE, designated SEQ ID:18391, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56618] Another function of GAM7957 is therefore inhibition of

LOC196540 (Accession XP_116933.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196540.

[56619] LOC197201 (Accession XP_113839.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC197201 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC197201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197201 BINDING SITE, designated SEQ ID:4083, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56620] Another function of GAM7957 is therefore inhibition of LOC197201 (Accession XP_113839.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197201.

[56621] LOC197342 (Accession XP_113869.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC197342 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC197342, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197342 BINDING SITE, designated SEQ ID:18190, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56622] Another function of GAM7957 is therefore inhibition of LOC197342 (Accession XP_113869.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197342.

[56623] LOC199676 (Accession XP_117107.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC199676 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC199676, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199676 BINDING SITE, designated SEQ ID:12792, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[56624] Another function of GAM7957 is therefore inhibition of LOC199676 (Accession XP_117107.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199676.

[56625] LOC199858 (Accession XP_114040.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC199858 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC199858, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199858 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56626] Another function of GAM7957 is therefore inhibition of LOC199858 (Accession XP_114040.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199858.

[56627] LOC200298 (Accession XP_117217.2) is another

GAM7957 target gene, herein designated TARGET GENE. LOC200298 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC200298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200298 BINDING SITE, designated SEQ ID:14572, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56628] Another function of GAM7957 is therefore inhibition of LOC200298 (Accession XP_117217.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200298.

[56629] LOC200731 (Accession XP_117268.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC200731 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC200731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200731 BINDING SITE, design-

nated SEQ ID:3813, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56630] Another function of GAM7957 is therefore inhibition of LOC200731 (Accession XP_117268.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200731.

[56631] LOC201705 (Accession XP_117329.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC201705 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC201705, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201705 BINDING SITE, designated SEQ ID:9125, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56632] Another function of GAM7957 is therefore inhibition of LOC201705 (Accession XP_117329.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC201705.

[56633] LOC201868 (Accession XP_114393.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC201868 BINDING SITE1 and LOC201868 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC201868, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201868 BINDING SITE1 and LOC201868 BINDING SITE2, designated SEQ ID:19499 and SEQ ID:17081 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56634] Another function of GAM7957 is therefore inhibition of LOC201868 (Accession XP_114393.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201868.

[56635] LOC201895 (Accession NP_777581.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC201895 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC201895, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201895 BINDING SITE, designated SEQ ID:2773, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56636] Another function of GAM7957 is therefore inhibition of LOC201895 (Accession NP_777581.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201895.

[56637] LOC201911 (Accession XP_117339.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC201911 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC201911, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201911 BINDING SITE, designated SEQ ID:2545, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56638] Another function of GAM7957 is therefore inhibition of

LOC201911 (Accession XP_117339.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201911.

[56639] LOC202134 (Accession XP_117365.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC202134 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC202134, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202134 BINDING SITE, designated SEQ ID:15085, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56640] Another function of GAM7957 is therefore inhibition of LOC202134 (Accession XP_117365.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202134.

[56641] LOC202460 (Accession XP_114493.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC202460 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC202460, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202460 BINDING SITE, designated SEQ ID:5365, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56642] Another function of GAM7957 is therefore inhibition of LOC202460 (Accession XP_114493.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202460.

[56643] LOC202781 (Accession XP_117455.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC202781 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC202781, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202781 BINDING SITE, designated SEQ ID:17055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[56644] Another function of GAM7957 is therefore inhibition of LOC202781 (Accession XP_117455.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202781.

[56645] LOC202868 (Accession XP_117477.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC202868 BINDING SITE1 through LOC202868 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC202868, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202868 BINDING SITE1 through LOC202868 BINDING SITE3, designated SEQ ID:614, SEQ ID:15108 and SEQ ID:2487 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56646] Another function of GAM7957 is therefore inhibition of LOC202868 (Accession XP_117477.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202868.

[56647] LOC202934 (Accession XP_117486.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC202934 BINDING SITE1 and LOC202934 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC202934, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202934 BINDING SITE1 and LOC202934 BINDING SITE2, designated SEQ ID:13454 and SEQ ID:2071 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56648] Another function of GAM7957 is therefore inhibition of LOC202934 (Accession XP_117486.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202934.

[56649] LOC203245 (Accession XP_114657.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC203245 BINDING SITE1 and LOC203245 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC203245, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC203245 BINDING SITE1 and LOC203245 BINDING SITE2, designated SEQ ID:3440 and SEQ ID:2549 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56650] Another function of GAM7957 is therefore inhibition of LOC203245 (Accession XP_114657.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203245.

[56651] LOC204288 (Accession XP_115295.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC204288 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC204288, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC204288 BINDING SITE, designated SEQ ID:11765, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56652] Another function of GAM7957 is therefore inhibition of

LOC204288 (Accession XP_115295.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC204288.

[56653] LOC205272 (Accession XP_115760.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC205272 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC205272, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC205272 BINDING SITE, designated SEQ ID:12156, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56654] Another function of GAM7957 is therefore inhibition of LOC205272 (Accession XP_115760.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC205272.

[56655] LOC206412 (Accession XP_116497.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC206412 BINDING SITE1 and LOC206412 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC206412, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC206412 BINDING SITE1 and LOC206412 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:4032 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56656] Another function of GAM7957 is therefore inhibition of LOC206412 (Accession XP_116497.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC206412.

[56657] LOC219293 (Accession XP_166599.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC219293 BINDING SITE1 through LOC219293 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC219293, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219293 BINDING SITE1 through LOC219293 BINDING SITE4, des-

ignated SEQ ID:17505, SEQ ID:13988, SEQ ID:9335 and SEQ ID:3056 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56658] Another function of GAM7957 is therefore inhibition of LOC219293 (Accession XP_166599.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219293.

[56659] LOC219347 (Accession XP_167564.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC219347 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC219347, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219347 BINDING SITE, designated SEQ ID:614, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56660] Another function of GAM7957 is therefore inhibition of LOC219347 (Accession XP_167564.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC219347.

[56661] LOC219649 (Accession XP_167562.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC219649 BINDING SITE1 through LOC219649 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC219649, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219649 BINDING SITE1 through LOC219649 BINDING SITE3, designated SEQ ID:4880, SEQ ID:19057 and SEQ ID:6149 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56662] Another function of GAM7957 is therefore inhibition of LOC219649 (Accession XP_167562.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219649.

[56663] LOC219690 (Accession XP_167572.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC219690 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC219690, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219690 BINDING SITE, designated SEQ ID:5800, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56664] Another function of GAM7957 is therefore inhibition of LOC219690 (Accession XP_167572.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219690.

[56665] LOC219722 (Accession XP_167593.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC219722 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219722, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219722 BINDING SITE, designated SEQ ID:4908, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56666] Another function of GAM7957 is therefore inhibition of LOC219722 (Accession XP_167593.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219722.

[56667] LOC219908 (Accession XP_169057.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC219908 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC219908, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219908 BINDING SITE, designated SEQ ID:15762, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56668] Another function of GAM7957 is therefore inhibition of LOC219908 (Accession XP_169057.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219908.

[56669] LOC219919 (Accession XP_167785.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC219919 BINDING SITE1 and LOC219919 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC219919, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219919 BINDING SITE1 and LOC219919 BINDING SITE2, designated SEQ ID:19952 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56670] Another function of GAM7957 is therefore inhibition of LOC219919 (Accession XP_167785.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219919.

[56671] LOC220070 (Accession NP_660351.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC220070 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC220070, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220070 BINDING SITE, design-

nated SEQ ID:645, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56672] Another function of GAM7957 is therefore inhibition of LOC220070 (Accession NP_660351.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220070.

[56673] LOC220906 (Accession XP_166133.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC220906 BINDING SITE1 and LOC220906 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC220906, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220906 BINDING SITE1 and LOC220906 BINDING SITE2, designated SEQ ID:12432 and SEQ ID:5882 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56674] Another function of GAM7957 is therefore inhibition of LOC220906 (Accession XP_166133.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC220906.

[56675] LOC221042 (Accession XP_167669.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC221042 BINDING SITE1 and LOC221042 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC221042, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221042 BINDING SITE1 and LOC221042 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:10438 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56676] Another function of GAM7957 is therefore inhibition of LOC221042 (Accession XP_167669.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221042.

[56677] LOC221091 (Accession XP_169026.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221091 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC221091, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221091 BINDING SITE, designated SEQ ID:11627, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56678] Another function of GAM7957 is therefore inhibition of LOC221091 (Accession XP_169026.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221091.

[56679] LOC221288 (Accession XP_168058.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221288 BINDING SITE1 and LOC221288 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC221288, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221288 BINDING SITE1 and LOC221288 BINDING SITE2, designated SEQ ID:17328 and SEQ ID:11276 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[56680] Another function of GAM7957 is therefore inhibition of LOC221288 (Accession XP_168058.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221288.

[56681] LOC221543 (Accession XP_168091.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221543 BINDING SITE1 and LOC221543 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC221543, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221543 BINDING SITE1 and LOC221543 BINDING SITE2, designated SEQ ID:5859 and SEQ ID:17535 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56682] Another function of GAM7957 is therefore inhibition of LOC221543 (Accession XP_168091.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221543.

[56683] LOC221550 (Accession XP_166388.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221550 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC221550, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221550 BINDING SITE, designated SEQ ID:16121, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56684] Another function of GAM7957 is therefore inhibition of LOC221550 (Accession XP_166388.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221550.

[56685] LOC221889 (Accession XP_166513.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221889 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC221889, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC221889 BINDING SITE, designated SEQ ID:8562, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56686] Another function of GAM7957 is therefore inhibition of LOC221889 (Accession XP_166513.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221889.

[56687] LOC221943 (Accession XP_168343.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221943 BINDING SITE1 and LOC221943 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC221943, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221943 BINDING SITE1 and LOC221943 BINDING SITE2, designated SEQ ID:3974 and SEQ ID:4428 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56688] Another function of GAM7957 is therefore inhibition of LOC221943 (Accession XP_168343.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221943.

[56689] LOC221954 (Accession XP_168349.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221954 BINDING SITE1 and LOC221954 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC221954, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221954 BINDING SITE1 and LOC221954 BINDING SITE2, designated SEQ ID:5782 and SEQ ID:19058 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56690] Another function of GAM7957 is therefore inhibition of LOC221954 (Accession XP_168349.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221954.

[56691] LOC221962 (Accession XP_166554.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC221962 BINDING SITE1 and LOC221962 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC221962, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221962 BINDING SITE1 and LOC221962 BINDING SITE2, designated SEQ ID:14360 and SEQ ID:15781 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56692] Another function of GAM7957 is therefore inhibition of LOC221962 (Accession XP_166554.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221962.

[56693] LOC222031 (Accession XP_168371.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC222031 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC222031, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222031 BINDING SITE, designated SEQ ID:10696, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56694] Another function of GAM7957 is therefore inhibition of LOC222031 (Accession XP_168371.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222031.

[56695] LOC222060 (Accession XP_168427.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC222060 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222060, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222060 BINDING SITE, designated SEQ ID:18690, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56696] Another function of GAM7957 is therefore inhibition of LOC222060 (Accession XP_168427.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222060.

[56697] LOC222160 (Accession XP_168431.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC222160 BINDING SITE1 through LOC222160 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC222160, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222160 BINDING SITE1 through LOC222160 BINDING SITE4, designated SEQ ID:9832, SEQ ID:10916, SEQ ID:2116 and SEQ ID:15984 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56698] Another function of GAM7957 is therefore inhibition of LOC222160 (Accession XP_168431.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222160.

[56699] LOC222225 (Accession XP_168633.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC222225 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC222225, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222225 BINDING SITE, designated SEQ ID:18049, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56700] Another function of GAM7957 is therefore inhibition of LOC222225 (Accession XP_168633.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222225.

[56701] LOC222662 (Accession XP_167086.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC222662 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC222662, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222662 BINDING SITE, designated SEQ ID:10395, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56702] Another function of GAM7957 is therefore inhibition of

LOC222662 (Accession XP_167086.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222662.

[56703] LOC222674 (Accession XP_167095.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC222674 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC222674, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222674 BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56704] Another function of GAM7957 is therefore inhibition of LOC222674 (Accession XP_167095.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222674.

[56705] LOC253216 (Accession XP_170765.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC253216 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC253216, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253216 BINDING SITE, designated SEQ ID:6471, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56706] Another function of GAM7957 is therefore inhibition of LOC253216 (Accession XP_170765.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253216.

[56707] LOC253612 (Accession XP_172985.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC253612 BINDING SITE1 and LOC253612 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC253612, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253612 BINDING SITE1 and LOC253612 BINDING SITE2, designated SEQ ID:10438 and SEQ ID:5924 respectively, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56708] Another function of GAM7957 is therefore inhibition of LOC253612 (Accession XP_172985.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253612.

[56709] LOC254100 (Accession XP_172851.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC254100 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC254100, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254100 BINDING SITE, designated SEQ ID:14304, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56710] Another function of GAM7957 is therefore inhibition of LOC254100 (Accession XP_172851.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254100.

[56711] LOC254266 (Accession XP_173221.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC254266 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC254266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254266 BINDING SITE, designated SEQ ID:9572, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56712] Another function of GAM7957 is therefore inhibition of LOC254266 (Accession XP_173221.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254266.

[56713] LOC254808 (Accession XP_173100.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC254808 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC254808, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC254808 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56714] Another function of GAM7957 is therefore inhibition of LOC254808 (Accession XP_173100.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254808.

[56715] LOC254875 (Accession XP_171170.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC254875 BINDING SITE1 and LOC254875 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC254875, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254875 BINDING SITE1 and LOC254875 BINDING SITE2, designated SEQ ID:2306 and SEQ ID:7908 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56716] Another function of GAM7957 is therefore inhibition of LOC254875 (Accession XP_171170.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254875.

[56717] LOC254946 (Accession XP_171161.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC254946 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC254946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254946 BINDING SITE, designated SEQ ID:9560, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56718] Another function of GAM7957 is therefore inhibition of LOC254946 (Accession XP_171161.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254946.

[56719] LOC255031 (Accession XP_173187.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC255031 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC255031, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255031 BINDING SITE, designated SEQ ID:8789, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56720] Another function of GAM7957 is therefore inhibition of LOC255031 (Accession XP_173187.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255031.

[56721] LOC255177 (Accession XP_172941.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC255177 BINDING SITE1 and LOC255177 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC255177, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255177 BINDING SITE1 and LOC255177 BINDING SITE2, designated SEQ ID:6524 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[56722] Another function of GAM7957 is therefore inhibition of LOC255177 (Accession XP_172941.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255177.

[56723] LOC255328 (Accession XP_172920.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC255328 BINDING SITE1 and LOC255328 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC255328, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255328 BINDING SITE1 and LOC255328 BINDING SITE2, designated SEQ ID:11775 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56724] Another function of GAM7957 is therefore inhibition of LOC255328 (Accession XP_172920.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255328.

[56725] LOC255374 (Accession XP_171171.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC255374 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC255374, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255374 BINDING SITE, designated SEQ ID:6760, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56726] Another function of GAM7957 is therefore inhibition of LOC255374 (Accession XP_171171.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255374.

[56727] LOC255971 (Accession XP_172907.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC255971 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC255971, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC255971 BINDING SITE, designated SEQ ID:5830, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56728] Another function of GAM7957 is therefore inhibition of LOC255971 (Accession XP_172907.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255971.

[56729] LOC256019 (Accession XP_171084.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC256019 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC256019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256019 BINDING SITE, designated SEQ ID:12654, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56730] Another function of GAM7957 is therefore inhibition of LOC256019 (Accession XP_171084.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC256019.

[56731] LOC256106 (Accession XP_172187.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC256106 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC256106, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256106 BINDING SITE, designated SEQ ID:18825, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56732] Another function of GAM7957 is therefore inhibition of LOC256106 (Accession XP_172187.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256106.

[56733] LOC256470 (Accession XP_171439.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC256470 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC256470, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256470 BINDING SITE, designated SEQ ID:10018, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56734] Another function of GAM7957 is therefore inhibition of LOC256470 (Accession XP_171439.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256470.

[56735] LOC256515 (Accession XP_172866.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC256515 BINDING SITE1 and LOC256515 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC256515, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256515 BINDING SITE1 and LOC256515 BINDING SITE2, designated SEQ ID:7125 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56736] Another function of GAM7957 is therefore inhibition of LOC256515 (Accession XP_172866.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256515.

[56737] LOC256594 (Accession XP_173127.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC256594 BINDING SITE1 and LOC256594 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC256594, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256594 BINDING SITE1 and LOC256594 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:2732 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56738] Another function of GAM7957 is therefore inhibition of LOC256594 (Accession XP_173127.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256594.

[56739] LOC282910 (Accession XP_212580.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC282910 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282910, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282910 BINDING SITE, designated SEQ ID:16121, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56740] Another function of GAM7957 is therefore inhibition of LOC282910 (Accession XP_212580.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282910.

[56741] LOC282915 (Accession XP_212579.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC282915 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282915, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282915 BINDING SITE, design-

nated SEQ ID:5928, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56742] Another function of GAM7957 is therefore inhibition of LOC282915 (Accession XP_212579.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282915.

[56743] LOC282947 (Accession XP_212628.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC282947 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282947, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282947 BINDING SITE, designated SEQ ID:16121, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56744] Another function of GAM7957 is therefore inhibition of LOC282947 (Accession XP_212628.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC282947.

[56745] LOC282951 (Accession XP_212627.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC282951 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282951, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282951 BINDING SITE, designated SEQ ID:5928, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56746] Another function of GAM7957 is therefore inhibition of LOC282951 (Accession XP_212627.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282951.

[56747] LOC282959 (Accession XP_212622.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC282959 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282959, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282959 BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56748] Another function of GAM7957 is therefore inhibition of LOC282959 (Accession XP_212622.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282959.

[56749] LOC282963 (Accession XP_210834.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC282963 BINDING SITE1 and LOC282963 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC282963, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282963 BINDING SITE1 and LOC282963 BINDING SITE2, designated SEQ ID:15343 and SEQ ID:15108 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56750] Another function of GAM7957 is therefore inhibition of

LOC282963 (Accession XP_210834.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282963.

[56751] LOC282987 (Accession XP_210845.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC282987 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC282987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282987 BINDING SITE, designated SEQ ID:18905, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56752] Another function of GAM7957 is therefore inhibition of LOC282987 (Accession XP_210845.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282987.

[56753] LOC283005 (Accession XP_208481.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283005 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC283005, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283005 BINDING SITE, designated SEQ ID:9858, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56754] Another function of GAM7957 is therefore inhibition of LOC283005 (Accession XP_208481.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283005.

[56755] LOC283050 (Accession XP_210872.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283050 BINDING SITE1 and LOC283050 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283050, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283050 BINDING SITE1 and LOC283050 BINDING SITE2, designated SEQ ID:4180 and SEQ ID:1557 respectively, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56756] Another function of GAM7957 is therefore inhibition of LOC283050 (Accession XP_210872.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283050.

[56757] LOC283061 (Accession XP_210875.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283061 BINDING SITE1 and LOC283061 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283061, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283061 BINDING SITE1 and LOC283061 BINDING SITE2, designated SEQ ID:18041 and SEQ ID:19246 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56758] Another function of GAM7957 is therefore inhibition of LOC283061 (Accession XP_210875.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283061.

[56759] LOC283083 (Accession XP_210883.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283083 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283083, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283083 BINDING SITE, designated SEQ ID:8877, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56760] Another function of GAM7957 is therefore inhibition of LOC283083 (Accession XP_210883.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283083.

[56761] LOC283107 (Accession XP_210889.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283107 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283107 BINDING SITE, designated SEQ ID:16476, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56762] Another function of GAM7957 is therefore inhibition of LOC283107 (Accession XP_210889.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283107.

[56763] LOC283125 (Accession XP_210897.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283125 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283125 BINDING SITE, designated SEQ ID:13229, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56764] Another function of GAM7957 is therefore inhibition of LOC283125 (Accession XP_210897.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283125.

[56765] LOC283143 (Accession XP_210920.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283143 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283143 BINDING SITE, designated SEQ ID:16945, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56766] Another function of GAM7957 is therefore inhibition of LOC283143 (Accession XP_210920.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283143.

[56767] LOC283168 (Accession XP_210910.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283168 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC283168, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283168 BINDING SITE, designated SEQ ID:19057, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56768] Another function of GAM7957 is therefore inhibition of LOC283168 (Accession XP_210910.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283168.

[56769] LOC283177 (Accession XP_210903.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283177 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283177 BINDING SITE, designated SEQ ID:12613, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56770] Another function of GAM7957 is therefore inhibition of LOC283177 (Accession XP_210903.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283177.

[56771] LOC283208 (Accession XP_208559.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC283208 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283208, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283208 BINDING SITE, designated SEQ ID:9151, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56772] Another function of GAM7957 is therefore inhibition of LOC283208 (Accession XP_208559.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283208.

[56773] LOC283215 (Accession XP_208555.2) is another GAM7957 target gene, herein designated TARGET GENE.

LOC283215 BINDING SITE1 and LOC283215 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283215, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283215 BINDING SITE1 and LOC283215 BINDING SITE2, designated SEQ ID:8878 and SEQ ID:9770 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56774] Another function of GAM7957 is therefore inhibition of LOC283215 (Accession XP_208555.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283215.

[56775] LOC283235 (Accession XP_208578.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283235 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283235 BINDING SITE, design-

nated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56776] Another function of GAM7957 is therefore inhibition of LOC283235 (Accession XP_208578.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283235.

[56777] LOC283243 (Accession XP_210947.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC283243 BINDING SITE1 and LOC283243 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283243, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283243 BINDING SITE1 and LOC283243 BINDING SITE2, designated SEQ ID:11352 and SEQ ID:14360 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56778] Another function of GAM7957 is therefore inhibition of LOC283243 (Accession XP_210947.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283243.

[56779] LOC283244 (Accession XP_208583.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC283244 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283244, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283244 BINDING SITE, designated SEQ ID:18377, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56780] Another function of GAM7957 is therefore inhibition of LOC283244 (Accession XP_208583.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283244.

[56781] LOC283269 (Accession XP_210953.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283269 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283269, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283269 BINDING SITE, designated SEQ ID:1906, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56782] Another function of GAM7957 is therefore inhibition of LOC283269 (Accession XP_210953.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283269.

[56783] LOC283283 (Accession XP_208601.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283283 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283283, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283283 BINDING SITE, designated SEQ ID:19053, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56784] Another function of GAM7957 is therefore inhibition of

LOC283283 (Accession XP_208601.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283283.

[56785] LOC283295 (Accession XP_210964.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283295 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283295 BINDING SITE, designated SEQ ID:12929, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56786] Another function of GAM7957 is therefore inhibition of LOC283295 (Accession XP_210964.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283295.

[56787] LOC283299 (Accession XP_210965.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283299 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC283299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283299 BINDING SITE, designated SEQ ID:12796, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56788] Another function of GAM7957 is therefore inhibition of LOC283299 (Accession XP_210965.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283299.

[56789] LOC283314 (Accession XP_210969.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283314 BINDING SITE1 and LOC283314 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283314, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283314 BINDING SITE1 and LOC283314 BINDING SITE2, designated SEQ ID:14571 and SEQ ID:18826 respectively, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56790] Another function of GAM7957 is therefore inhibition of LOC283314 (Accession XP_210969.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283314.

[56791] LOC283325 (Accession XP_208618.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283325 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283325, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283325 BINDING SITE, designated SEQ ID:15781, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56792] Another function of GAM7957 is therefore inhibition of LOC283325 (Accession XP_208618.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283325.

[56793] LOC283329 (Accession XP_210978.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283329 BINDING SITE1 and LOC283329 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283329, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283329 BINDING SITE1 and LOC283329 BINDING SITE2, designated SEQ ID:18024 and SEQ ID:12188 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56794] Another function of GAM7957 is therefore inhibition of LOC283329 (Accession XP_210978.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283329.

[56795] LOC283357 (Accession XP_210991.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283357 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283357, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283357 BINDING SITE, designated SEQ ID:15018, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56796] Another function of GAM7957 is therefore inhibition of LOC283357 (Accession XP_210991.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283357.

[56797] LOC283382 (Accession XP_211005.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283382 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283382, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283382 BINDING SITE, designated SEQ ID:9260, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56798] Another function of GAM7957 is therefore inhibition of LOC283382 (Accession XP_211005.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283382.

[56799] LOC283394 (Accession XP_211021.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283394 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283394 BINDING SITE, designated SEQ ID:17398, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56800] Another function of GAM7957 is therefore inhibition of LOC283394 (Accession XP_211021.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283394.

[56801] LOC283415 (Accession XP_208084.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283415 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC283415, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283415 BINDING SITE, designated SEQ ID:19054, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56802] Another function of GAM7957 is therefore inhibition of LOC283415 (Accession XP_208084.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283415.

[56803] LOC283437 (Accession XP_211038.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283437 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283437, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283437 BINDING SITE, designated SEQ ID:13667, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56804] Another function of GAM7957 is therefore inhibition of LOC283437 (Accession XP_211038.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283437.

[56805] LOC283438 (Accession XP_211042.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283438 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283438, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283438 BINDING SITE, designated SEQ ID:15747, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56806] Another function of GAM7957 is therefore inhibition of LOC283438 (Accession XP_211042.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283438.

[56807] LOC283442 (Accession XP_211037.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC283442 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283442 BINDING SITE, designated SEQ ID:15984, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56808] Another function of GAM7957 is therefore inhibition of LOC283442 (Accession XP_211037.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283442.

[56809] LOC283453 (Accession XP_211047.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283453 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283453, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283453 BINDING SITE, designated SEQ ID:19898, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56810] Another function of GAM7957 is therefore inhibition of LOC283453 (Accession XP_211047.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283453.

[56811] LOC283460 (Accession XP_208682.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283460 BINDING SITE1 through LOC283460 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC283460, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283460 BINDING SITE1 through LOC283460 BINDING SITE3, designated SEQ ID:3523, SEQ ID:15308 and SEQ ID:1620 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56812] Another function of GAM7957 is therefore inhibition of LOC283460 (Accession XP_208682.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283460.

[56813] LOC283467 (Accession XP_211050.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283467 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283467 BINDING SITE, designated SEQ ID:16897, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56814] Another function of GAM7957 is therefore inhibition of LOC283467 (Accession XP_211050.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283467.

[56815] LOC283506 (Accession XP_211073.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283506 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283506, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283506 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56816] Another function of GAM7957 is therefore inhibition of LOC283506 (Accession XP_211073.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283506.

[56817] LOC283508 (Accession XP_211070.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283508 BINDING SITE1 and LOC283508 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283508, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283508 BINDING SITE1 and LOC283508 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:14789 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56818] Another function of GAM7957 is therefore inhibition of

LOC283508 (Accession XP_211070.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283508.

[56819] LOC283531 (Accession XP_211078.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283531 BINDING SITE1 and LOC283531 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283531, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283531 BINDING SITE1 and LOC283531 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:14787 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56820] Another function of GAM7957 is therefore inhibition of LOC283531 (Accession XP_211078.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283531.

[56821] LOC283566 (Accession XP_211114.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC283566 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283566, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283566 BINDING SITE, designated SEQ ID:9763, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56822] Another function of GAM7957 is therefore inhibition of LOC283566 (Accession XP_211114.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283566.

[56823] LOC283570 (Accession XP_211118.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283570 BINDING SITE1 and LOC283570 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283570, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283570 BINDING SITE1 and LOC283570 BINDING SITE2, design-

nated SEQ ID:18691 and SEQ ID:3025 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56824] Another function of GAM7957 is therefore inhibition of LOC283570 (Accession XP_211118.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283570.

[56825] LOC283633 (Accession XP_208762.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283633 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283633, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283633 BINDING SITE, designated SEQ ID:1548, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56826] Another function of GAM7957 is therefore inhibition of LOC283633 (Accession XP_208762.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283633.

[56827] LOC283655 (Accession XP_211144.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283655 BINDING SITE1 through LOC283655 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC283655, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283655 BINDING SITE1 through LOC283655 BINDING SITE4, designated SEQ ID:17452, SEQ ID:9536, SEQ ID:14905 and SEQ ID:13166 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56828] Another function of GAM7957 is therefore inhibition of LOC283655 (Accession XP_211144.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283655.

[56829] LOC283686 (Accession XP_211164.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283686 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC283686, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283686 BINDING SITE, designated SEQ ID:4155, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56830] Another function of GAM7957 is therefore inhibition of LOC283686 (Accession XP_211164.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283686.

[56831] LOC283690 (Accession XP_211167.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283690 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283690, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283690 BINDING SITE, designated SEQ ID:9781, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56832] Another function of GAM7957 is therefore inhibition of LOC283690 (Accession XP_211167.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283690.

[56833] LOC283693 (Accession XP_208788.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283693 BINDING SITE1 and LOC283693 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283693, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283693 BINDING SITE1 and LOC283693 BINDING SITE2, designated SEQ ID:2070 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56834] Another function of GAM7957 is therefore inhibition of LOC283693 (Accession XP_208788.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283693.

[56835] LOC283697 (Accession XP_211173.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC283697 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283697, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283697 BINDING SITE, designated SEQ ID:18836, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56836] Another function of GAM7957 is therefore inhibition of LOC283697 (Accession XP_211173.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283697.

[56837] LOC283706 (Accession XP_208804.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC283706 BINDING SITE1 and LOC283706 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283706, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283706

BINDING SITE1 and LOC283706 BINDING SITE2, designated SEQ ID:2678 and SEQ ID:15592 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56838] Another function of GAM7957 is therefore inhibition of LOC283706 (Accession XP_208804.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283706.

[56839] LOC283731 (Accession XP_211184.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283731 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283731 BINDING SITE, designated SEQ ID:8067, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56840] Another function of GAM7957 is therefore inhibition of LOC283731 (Accession XP_211184.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283731.

[56841] LOC283740 (Accession XP_208819.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283740 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283740, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283740 BINDING SITE, designated SEQ ID:13155, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56842] Another function of GAM7957 is therefore inhibition of LOC283740 (Accession XP_208819.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283740.

[56843] LOC283760 (Accession XP_208826.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC283760 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283760, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283760 BINDING SITE, designated SEQ ID:14124, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56844] Another function of GAM7957 is therefore inhibition of LOC283760 (Accession XP_208826.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283760.

[56845] LOC283767 (Accession XP_208835.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283767 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283767, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283767 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56846] Another function of GAM7957 is therefore inhibition of

LOC283767 (Accession XP_208835.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283767.

[56847] LOC283778 (Accession XP_211199.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283778 BINDING SITE1 and LOC283778 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283778, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283778 BINDING SITE1 and LOC283778 BINDING SITE2, designated SEQ ID:14438 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56848] Another function of GAM7957 is therefore inhibition of LOC283778 (Accession XP_211199.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283778.

[56849] LOC283851 (Accession XP_211229.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC283851 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283851, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283851 BINDING SITE, designated SEQ ID:16120, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56850] Another function of GAM7957 is therefore inhibition of LOC283851 (Accession XP_211229.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283851.

[56851] LOC283863 (Accession XP_208875.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283863 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283863 BINDING SITE, designated SEQ ID:20057, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56852] Another function of GAM7957 is therefore inhibition of LOC283863 (Accession XP_208875.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283863.

[56853] LOC283875 (Accession XP_211241.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283875 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283875, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283875 BINDING SITE, designated SEQ ID:8987, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56854] Another function of GAM7957 is therefore inhibition of LOC283875 (Accession XP_211241.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283875.

[56855] LOC283889 (Accession XP_208899.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283889 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283889, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283889 BINDING SITE, designated SEQ ID:2881, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56856] Another function of GAM7957 is therefore inhibition of LOC283889 (Accession XP_208899.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283889.

[56857] LOC283894 (Accession XP_211250.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283894 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283894 BINDING SITE, designated SEQ ID:9765, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56858] Another function of GAM7957 is therefore inhibition of LOC283894 (Accession XP_211250.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283894.

[56859] LOC283909 (Accession XP_211256.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283909 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283909 BINDING SITE, designated SEQ ID:9765, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56860] Another function of GAM7957 is therefore inhibition of LOC283909 (Accession XP_211256.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283909.

[56861] LOC283924 (Accession XP_208906.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283924 BINDING SITE1 and LOC283924 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283924, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283924 BINDING SITE1 and LOC283924 BINDING SITE2, designated SEQ ID:4977 and SEQ ID:18690 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56862] Another function of GAM7957 is therefore inhibition of LOC283924 (Accession XP_208906.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283924.

[56863] LOC283928 (Accession XP_208909.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283928 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC283928, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283928 BINDING SITE, designated SEQ ID:962, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56864] Another function of GAM7957 is therefore inhibition of LOC283928 (Accession XP_208909.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283928.

[56865] LOC283929 (Accession XP_208905.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC283929 BINDING SITE1 through LOC283929 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC283929, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283929 BINDING SITE1 through LOC283929 BINDING SITE3, designated SEQ ID:1734, SEQ ID:7877 and SEQ ID:9417 respectively, to the nucleotide sequence of GAM7957 RNA,

herein designated GAM RNA, also designated SEQ ID:297.

[56866] Another function of GAM7957 is therefore inhibition of LOC283929 (Accession XP_208905.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283929.

[56867] LOC283932 (Accession NP_787097.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283932 BINDING SITE1 and LOC283932 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283932, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283932 BINDING SITE1 and LOC283932 BINDING SITE2, designated SEQ ID:8956 and SEQ ID:6418 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56868] Another function of GAM7957 is therefore inhibition of LOC283932 (Accession NP_787097.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283932.

[56869] LOC283949 (Accession XP_208928.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283949 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283949 BINDING SITE, designated SEQ ID:12303, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56870] Another function of GAM7957 is therefore inhibition of LOC283949 (Accession XP_208928.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283949.

[56871] LOC283954 (Accession XP_208931.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283954 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283954 BINDING SITE, designated SEQ ID:18689, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56872] Another function of GAM7957 is therefore inhibition of LOC283954 (Accession XP_208931.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283954.

[56873] LOC283972 (Accession XP_211282.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283972 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283972 BINDING SITE, designated SEQ ID:471, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56874] Another function of GAM7957 is therefore inhibition of LOC283972 (Accession XP_211282.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283972.

[56875] LOC283981 (Accession XP_208941.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283981 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283981, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283981 BINDING SITE, designated SEQ ID:9983, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56876] Another function of GAM7957 is therefore inhibition of LOC283981 (Accession XP_208941.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283981.

[56877] LOC283985 (Accession XP_208951.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC283985 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC283985, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283985 BINDING SITE, designated SEQ ID:15983, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56878] Another function of GAM7957 is therefore inhibition of LOC283985 (Accession XP_208951.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283985.

[56879] LOC283985 (Accession NP_835229.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283985 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC283985, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283985 BINDING SITE, designated SEQ ID:15983, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56880] Another function of GAM7957 is therefore inhibition of

LOC283985 (Accession NP_835229.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283985.

[56881] LOC283995 (Accession XP_208945.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC283995 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283995, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283995 BINDING SITE, designated SEQ ID:11864, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56882] Another function of GAM7957 is therefore inhibition of LOC283995 (Accession XP_208945.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283995.

[56883] LOC284001 (Accession XP_208958.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC284001 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC284001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284001 BINDING SITE, designated SEQ ID:17795, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56884] Another function of GAM7957 is therefore inhibition of LOC284001 (Accession XP_208958.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284001.

[56885] LOC284009 (Accession XP_211299.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284009 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284009, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284009 BINDING SITE, designated SEQ ID:12796, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[56886] Another function of GAM7957 is therefore inhibition of LOC284009 (Accession XP_211299.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284009.

[56887] LOC284014 (Accession XP_211300.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC284014 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284014, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284014 BINDING SITE, designated SEQ ID:5830, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56888] Another function of GAM7957 is therefore inhibition of LOC284014 (Accession XP_211300.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284014.

[56889] LOC284024 (Accession XP_208970.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC284024 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284024 BINDING SITE, designated SEQ ID:9417, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56890] Another function of GAM7957 is therefore inhibition of LOC284024 (Accession XP_208970.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284024.

[56891] LOC284031 (Accession XP_208982.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284031 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284031, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284031 BINDING SITE, design-

nated SEQ ID:9422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56892] Another function of GAM7957 is therefore inhibition of LOC284031 (Accession XP_208982.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284031.

[56893] LOC284044 (Accession XP_211310.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284044 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284044, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284044 BINDING SITE, designated SEQ ID:723, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56894] Another function of GAM7957 is therefore inhibition of LOC284044 (Accession XP_211310.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284044.

[56895] LOC284048 (Accession XP_208152.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284048 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284048 BINDING SITE, designated SEQ ID:12193, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56896] Another function of GAM7957 is therefore inhibition of LOC284048 (Accession XP_208152.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284048.

[56897] LOC284062 (Accession XP_211316.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284062 BINDING SITE1 through LOC284062 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284062, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284062 BINDING SITE1 through LOC284062 BINDING SITE3, designated SEQ ID:6320, SEQ ID:2483 and SEQ ID:8856 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56898] Another function of GAM7957 is therefore inhibition of LOC284062 (Accession XP_211316.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284062.

[56899] LOC284072 (Accession XP_211319.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284072 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284072, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284072 BINDING SITE, designated SEQ ID:947, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56900] Another function of GAM7957 is therefore inhibition of

LOC284072 (Accession XP_211319.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284072.

[56901] LOC284074 (Accession XP_211321.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284074 BINDING SITE1 through LOC284074 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284074, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284074 BINDING SITE1 through LOC284074 BINDING SITE3, designated SEQ ID:3337, SEQ ID:11071 and SEQ ID:1199 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56902] Another function of GAM7957 is therefore inhibition of LOC284074 (Accession XP_211321.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284074.

[56903] LOC284101 (Accession XP_209019.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC284101 BINDING SITE1 and LOC284101 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284101, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284101 BINDING SITE1 and LOC284101 BINDING SITE2, designated SEQ ID:13155 and SEQ ID:8019 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56904] Another function of GAM7957 is therefore inhibition of LOC284101 (Accession XP_209019.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284101.

[56905] LOC284102 (Accession XP_211327.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC284102 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284102 BINDING SITE, design-

nated SEQ ID:10901, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56906] Another function of GAM7957 is therefore inhibition of LOC284102 (Accession XP_211327.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284102.

[56907] LOC284121 (Accession XP_209026.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284121 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284121 BINDING SITE, designated SEQ ID:4377, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56908] Another function of GAM7957 is therefore inhibition of LOC284121 (Accession XP_209026.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284121.

[56909] LOC284145 (Accession XP_211353.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284145 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284145, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284145 BINDING SITE, designated SEQ ID:5042, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56910] Another function of GAM7957 is therefore inhibition of LOC284145 (Accession XP_211353.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284145.

[56911] LOC284155 (Accession XP_211354.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284155 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284155 BINDING SITE, designated SEQ ID:12886, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56912] Another function of GAM7957 is therefore inhibition of LOC284155 (Accession XP_211354.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284155.

[56913] LOC284158 (Accession XP_209041.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284158 BINDING SITE1 and LOC284158 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284158, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284158 BINDING SITE1 and LOC284158 BINDING SITE2, designated SEQ ID:1163 and SEQ ID:3397 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56914] Another function of GAM7957 is therefore inhibition of

LOC284158 (Accession XP_209041.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284158.

[56915] LOC284161 (Accession XP_209047.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC284161 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284161 BINDING SITE, designated SEQ ID:19278, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56916] Another function of GAM7957 is therefore inhibition of LOC284161 (Accession XP_209047.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284161.

[56917] LOC284170 (Accession XP_211357.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284170 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC284170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284170 BINDING SITE, designated SEQ ID:18300, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56918] Another function of GAM7957 is therefore inhibition of LOC284170 (Accession XP_211357.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284170.

[56919] LOC284174 (Accession XP_211363.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284174 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284174, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284174 BINDING SITE, designated SEQ ID:6740, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[56920] Another function of GAM7957 is therefore inhibition of LOC284174 (Accession XP_211363.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284174.

[56921] LOC284179 (Accession XP_211369.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284179 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284179, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284179 BINDING SITE, designated SEQ ID:11754, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56922] Another function of GAM7957 is therefore inhibition of LOC284179 (Accession XP_211369.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284179.

[56923] LOC284181 (Accession XP_209061.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC284181 BINDING SITE1 and LOC284181 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284181, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284181 BINDING SITE1 and LOC284181 BINDING SITE2, designated SEQ ID:14790 and SEQ ID:7321 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56924] Another function of GAM7957 is therefore inhibition of LOC284181 (Accession XP_209061.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284181.

[56925] LOC284183 (Accession XP_209059.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284183 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284183, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284183 BINDING SITE, designated SEQ ID:19195, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56926] Another function of GAM7957 is therefore inhibition of LOC284183 (Accession XP_209059.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284183.

[56927] LOC284187 (Accession XP_211366.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC284187 BINDING SITE1 through LOC284187 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284187, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284187 BINDING SITE1 through LOC284187 BINDING SITE3, designated SEQ ID:5070, SEQ ID:19057 and SEQ ID:12259 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56928] Another function of GAM7957 is therefore inhibition of LOC284187 (Accession XP_211366.2) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284187.

[56929] LOC284198 (Accession XP_211380.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284198 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284198, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284198 BINDING SITE, designated SEQ ID:4105, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56930] Another function of GAM7957 is therefore inhibition of LOC284198 (Accession XP_211380.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284198.

[56931] LOC284211 (Accession XP_211386.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284211 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC284211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284211 BINDING SITE, designated SEQ ID:16896, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56932] Another function of GAM7957 is therefore inhibition of LOC284211 (Accession XP_211386.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284211.

[56933] LOC284259 (Accession XP_211410.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284259 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284259 BINDING SITE, designated SEQ ID:11749, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56934] Another function of GAM7957 is therefore inhibition of LOC284259 (Accession XP_211410.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284259.

[56935] LOC284266 (Accession XP_211403.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284266 BINDING SITE1 and LOC284266 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284266, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284266 BINDING SITE1 and LOC284266 BINDING SITE2, designated SEQ ID:17403 and SEQ ID:1030 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56936] Another function of GAM7957 is therefore inhibition of LOC284266 (Accession XP_211403.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284266.

[56937] LOC284267 (Accession XP_211411.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC284267 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284267, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284267 BINDING SITE, designated SEQ ID:19637, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56938] Another function of GAM7957 is therefore inhibition of LOC284267 (Accession XP_211411.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284267.

[56939] LOC284280 (Accession XP_211416.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284280 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284280, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284280 BINDING SITE, design-

nated SEQ ID:7322, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56940] Another function of GAM7957 is therefore inhibition of LOC284280 (Accession XP_211416.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284280.

[56941] LOC284304 (Accession XP_211426.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284304 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284304, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284304 BINDING SITE, designated SEQ ID:13066, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56942] Another function of GAM7957 is therefore inhibition of LOC284304 (Accession XP_211426.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284304.

[56943] LOC284311 (Accession XP_302720.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284311 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284311, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284311 BINDING SITE, designated SEQ ID:14092, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56944] Another function of GAM7957 is therefore inhibition of LOC284311 (Accession XP_302720.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284311.

[56945] LOC284313 (Accession XP_209116.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284313 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284313 BINDING SITE, designated SEQ ID:12307, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56946] Another function of GAM7957 is therefore inhibition of LOC284313 (Accession XP_209116.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284313.

[56947] LOC284318 (Accession XP_209149.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284318 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284318 BINDING SITE, designated SEQ ID:13433, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56948] Another function of GAM7957 is therefore inhibition of LOC284318 (Accession XP_209149.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284318.

[56949] LOC284347 (Accession XP_209120.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284347 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284347, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284347 BINDING SITE, designated SEQ ID:698, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56950] Another function of GAM7957 is therefore inhibition of LOC284347 (Accession XP_209120.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284347.

[56951] LOC284371 (Accession XP_209155.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284371 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC284371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284371 BINDING SITE, designated SEQ ID:15609, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56952] Another function of GAM7957 is therefore inhibition of LOC284371 (Accession XP_209155.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284371.

[56953] LOC284376 (Accession XP_209157.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284376 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284376 BINDING SITE, designated SEQ ID:7223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56954] Another function of GAM7957 is therefore inhibition of LOC284376 (Accession XP_209157.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284376.

[56955] LOC284407 (Accession XP_209185.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284407 BINDING SITE1 through LOC284407 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC284407, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284407 BINDING SITE1 through LOC284407 BINDING SITE4, designated SEQ ID:9857, SEQ ID:5830, SEQ ID:9066 and SEQ ID:5831 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56956] Another function of GAM7957 is therefore inhibition of LOC284407 (Accession XP_209185.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284407.

[56957] LOC284410 (Accession XP_211449.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284410 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284410, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284410 BINDING SITE, designated SEQ ID:9500, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56958] Another function of GAM7957 is therefore inhibition of LOC284410 (Accession XP_211449.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284410.

[56959] LOC284412 (Accession XP_209184.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284412 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284412, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284412 BINDING SITE, designated SEQ ID:9777, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56960] Another function of GAM7957 is therefore inhibition of LOC284412 (Accession XP_209184.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284412.

[56961] LOC284417 (Accession XP_209187.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284417 BINDING SITE1 and LOC284417 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284417, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284417 BINDING SITE1 and LOC284417 BINDING SITE2, designated SEQ ID:3681 and SEQ ID:17423 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56962] Another function of GAM7957 is therefore inhibition of LOC284417 (Accession XP_209187.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284417.

[56963] LOC284419 (Accession XP_209193.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284419 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284419, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284419 BINDING SITE, designated SEQ ID:15017, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56964] Another function of GAM7957 is therefore inhibition of LOC284419 (Accession XP_209193.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284419.

[56965] LOC284434 (Accession XP_211460.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284434 BINDING SITE1 and LOC284434 BINDING SITE2 are target binding sites found in untranslated re-

gions of mRNA encoded by LOC284434, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284434 BINDING SITE1 and LOC284434 BINDING SITE2, designated SEQ ID:18690 and SEQ ID:9421 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56966] Another function of GAM7957 is therefore inhibition of LOC284434 (Accession XP_211460.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284434.

[56967] LOC284444 (Accession XP_209209.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284444 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284444, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284444 BINDING SITE, designated SEQ ID:11942, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[56968] Another function of GAM7957 is therefore inhibition of LOC284444 (Accession XP_209209.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284444.

[56969] LOC284486 (Accession XP_209231.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284486 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284486, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284486 BINDING SITE, designated SEQ ID:19196, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56970] Another function of GAM7957 is therefore inhibition of LOC284486 (Accession XP_209231.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284486.

[56971] LOC284514 (Accession XP_209244.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC284514 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284514 BINDING SITE, designated SEQ ID:15933, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56972] Another function of GAM7957 is therefore inhibition of LOC284514 (Accession XP_209244.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284514.

[56973] LOC284542 (Accession XP_209254.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284542 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284542 BINDING SITE, design-

nated SEQ ID:19461, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56974] Another function of GAM7957 is therefore inhibition of LOC284542 (Accession XP_209254.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284542.

[56975] LOC284557 (Accession XP_209256.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284557 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284557, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284557 BINDING SITE, designated SEQ ID:7964, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56976] Another function of GAM7957 is therefore inhibition of LOC284557 (Accession XP_209256.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284557.

[56977] LOC284574 (Accession XP_211527.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284574 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284574, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284574 BINDING SITE, designated SEQ ID:8381, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56978] Another function of GAM7957 is therefore inhibition of LOC284574 (Accession XP_211527.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284574.

[56979] LOC284577 (Accession XP_211522.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284577 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284577, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284577 BINDING SITE, designated SEQ ID:15308, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56980] Another function of GAM7957 is therefore inhibition of LOC284577 (Accession XP_211522.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284577.

[56981] LOC284600 (Accession XP_211548.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284600 BINDING SITE1 and LOC284600 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284600, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284600 BINDING SITE1 and LOC284600 BINDING SITE2, designated SEQ ID:1244 and SEQ ID:16341 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56982] Another function of GAM7957 is therefore inhibition of

LOC284600 (Accession XP_211548.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284600.

[56983] LOC284628 (Accession XP_211561.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284628 BINDING SITE1 and LOC284628 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284628, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284628 BINDING SITE1 and LOC284628 BINDING SITE2, designated SEQ ID:14786 and SEQ ID:9474 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56984] Another function of GAM7957 is therefore inhibition of LOC284628 (Accession XP_211561.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284628.

[56985] LOC284630 (Accession XP_211562.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC284630 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284630, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284630 BINDING SITE, designated SEQ ID:9946, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56986] Another function of GAM7957 is therefore inhibition of LOC284630 (Accession XP_211562.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284630.

[56987] LOC284639 (Accession XP_211567.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284639 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284639 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56988] Another function of GAM7957 is therefore inhibition of LOC284639 (Accession XP_211567.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284639.

[56989] LOC284650 (Accession XP_211571.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284650 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284650, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284650 BINDING SITE, designated SEQ ID:9422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56990] Another function of GAM7957 is therefore inhibition of LOC284650 (Accession XP_211571.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284650.

[56991] LOC284665 (Accession XP_211581.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284665 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284665, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284665 BINDING SITE, designated SEQ ID:2812, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56992] Another function of GAM7957 is therefore inhibition of LOC284665 (Accession XP_211581.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284665.

[56993] LOC284673 (Accession XP_211591.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284673 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284673 BINDING SITE, designated SEQ ID:9421, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56994] Another function of GAM7957 is therefore inhibition of LOC284673 (Accession XP_211591.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284673.

[56995] LOC284707 (Accession XP_211598.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284707 BINDING SITE1 through LOC284707 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284707, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284707 BINDING SITE1 through LOC284707 BINDING SITE3, designated SEQ ID:8917, SEQ ID:18690 and SEQ ID:15308 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56996] Another function of GAM7957 is therefore inhibition of LOC284707 (Accession XP_211598.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284707.

[56997] LOC284736 (Accession XP_209343.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284736 BINDING SITE1 and LOC284736 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284736, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284736 BINDING SITE1 and LOC284736 BINDING SITE2, designated SEQ ID:12933 and SEQ ID:19053 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[56998] Another function of GAM7957 is therefore inhibition of LOC284736 (Accession XP_209343.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284736.

[56999] LOC284757 (Accession XP_211616.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284757 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC284757, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284757 BINDING SITE, designated SEQ ID:17060, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57000] Another function of GAM7957 is therefore inhibition of LOC284757 (Accession XP_211616.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284757.

[57001] LOC284803 (Accession XP_211642.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284803 BINDING SITE1 through LOC284803 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284803, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284803 BINDING SITE1 through LOC284803 BINDING SITE3, designated SEQ ID:17328, SEQ ID:9535 and SEQ ID:13751 re-

spectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57002] Another function of GAM7957 is therefore inhibition of LOC284803 (Accession XP_211642.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284803.

[57003] LOC284808 (Accession XP_209372.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284808 BINDING SITE1 through LOC284808 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284808, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284808 BINDING SITE1 through LOC284808 BINDING SITE3, designated SEQ ID:7759, SEQ ID:18950 and SEQ ID:19941 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57004] Another function of GAM7957 is therefore inhibition of LOC284808 (Accession XP_209372.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284808.

[57005] LOC284844 (Accession XP_211662.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284844 BINDING SITE1 and LOC284844 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284844, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284844 BINDING SITE1 and LOC284844 BINDING SITE2, designated SEQ ID:9844 and SEQ ID:3325 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57006] Another function of GAM7957 is therefore inhibition of LOC284844 (Accession XP_211662.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284844.

[57007] LOC284845 (Accession XP_211663.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284845 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284845, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284845 BINDING SITE, designated SEQ ID:9422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57008] Another function of GAM7957 is therefore inhibition of LOC284845 (Accession XP_211663.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284845.

[57009] LOC284853 (Accession XP_209383.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284853 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284853 BINDING SITE, designated SEQ ID:15742, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57010] Another function of GAM7957 is therefore inhibition of

LOC284853 (Accession XP_209383.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284853.

[57011] LOC284857 (Accession XP_211671.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284857 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284857, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284857 BINDING SITE, designated SEQ ID:19058, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57012] Another function of GAM7957 is therefore inhibition of LOC284857 (Accession XP_211671.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284857.

[57013] LOC284858 (Accession XP_209386.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284858 BINDING SITE1 through LOC284858 BINDING

SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC284858, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284858 BINDING SITE1 through LOC284858 BINDING SITE4, designated SEQ ID:2488, SEQ ID:19500, SEQ ID:13155 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57014] Another function of GAM7957 is therefore inhibition of LOC284858 (Accession XP_209386.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284858.

[57015] LOC284859 (Accession XP_209384.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC284859 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284859, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284859 BINDING SITE, design-

nated SEQ ID:16401, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57016] Another function of GAM7957 is therefore inhibition of LOC284859 (Accession XP_209384.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284859.

[57017] LOC284861 (Accession XP_211670.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC284861 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284861 BINDING SITE, designated SEQ ID:16401, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57018] Another function of GAM7957 is therefore inhibition of LOC284861 (Accession XP_211670.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284861.

[57019] LOC284862 (Accession XP_211666.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284862 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284862, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284862 BINDING SITE, designated SEQ ID:9439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57020] Another function of GAM7957 is therefore inhibition of LOC284862 (Accession XP_211666.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284862.

[57021] LOC284873 (Accession XP_209412.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284873 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284873, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284873 BINDING SITE, designated SEQ ID:16401, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57022] Another function of GAM7957 is therefore inhibition of LOC284873 (Accession XP_209412.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284873.

[57023] LOC284899 (Accession XP_211680.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284899 BINDING SITE1 through LOC284899 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC284899, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284899 BINDING SITE1 through LOC284899 BINDING SITE4, designated SEQ ID:17082, SEQ ID:12699, SEQ ID:2520 and SEQ ID:15979 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57024] Another function of GAM7957 is therefore inhibition of LOC284899 (Accession XP_211680.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284899.

[57025] LOC284911 (Accession XP_211684.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284911 BINDING SITE1 and LOC284911 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284911, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284911 BINDING SITE1 and LOC284911 BINDING SITE2, designated SEQ ID:13631 and SEQ ID:4952 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57026] Another function of GAM7957 is therefore inhibition of LOC284911 (Accession XP_211684.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284911.

[57027] LOC284915 (Accession XP_209410.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC284915 BINDING SITE1 and LOC284915 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284915, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284915 BINDING SITE1 and LOC284915 BINDING SITE2, designated SEQ ID:16573 and SEQ ID:15344 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57028] Another function of GAM7957 is therefore inhibition of LOC284915 (Accession XP_209410.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284915.

[57029] LOC284936 (Accession XP_211699.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284936 BINDING SITE1 through LOC284936 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284936, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC284936 BINDING SITE1 through LOC284936 BINDING SITE3, designated SEQ ID:9420, SEQ ID:17279 and SEQ ID:5093 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57030] Another function of GAM7957 is therefore inhibition of LOC284936 (Accession XP_211699.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284936.

[57031] LOC284939 (Accession XP_211700.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284939 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284939, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284939 BINDING SITE, designated SEQ ID:14786, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57032] Another function of GAM7957 is therefore inhibition of LOC284939 (Accession XP_211700.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284939.

[57033] LOC284959 (Accession XP_211708.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284959 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284959, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284959 BINDING SITE, designated SEQ ID:10463, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57034] Another function of GAM7957 is therefore inhibition of LOC284959 (Accession XP_211708.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284959.

[57035] LOC284972 (Accession XP_211712.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284972 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC284972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284972 BINDING SITE, designated SEQ ID:6191, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57036] Another function of GAM7957 is therefore inhibition of LOC284972 (Accession XP_211712.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284972.

[57037] LOC284975 (Accession XP_211711.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284975 BINDING SITE1 and LOC284975 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284975, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284975 BINDING SITE1 and LOC284975 BINDING SITE2, designated SEQ ID:9420 and SEQ ID:12954 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57038] Another function of GAM7957 is therefore inhibition of LOC284975 (Accession XP_211711.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284975.

[57039] LOC284976 (Accession XP_211714.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284976 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284976, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284976 BINDING SITE, designated SEQ ID:10672, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57040] Another function of GAM7957 is therefore inhibition of LOC284976 (Accession XP_211714.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284976.

[57041] LOC284982 (Accession XP_211721.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC284982 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284982, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284982 BINDING SITE, designated SEQ ID:2521, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57042] Another function of GAM7957 is therefore inhibition of LOC284982 (Accession XP_211721.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284982.

[57043] LOC284993 (Accession XP_211722.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284993 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284993, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284993 BINDING SITE, design-

nated SEQ ID:13912, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57044] Another function of GAM7957 is therefore inhibition of LOC284993 (Accession XP_211722.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284993.

[57045] LOC284995 (Accession XP_211729.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC284995 BINDING SITE1 and LOC284995 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284995, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284995 BINDING SITE1 and LOC284995 BINDING SITE2, designated SEQ ID:1706 and SEQ ID:15343 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57046] Another function of GAM7957 is therefore inhibition of LOC284995 (Accession XP_211729.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284995.

[57047] LOC285043 (Accession XP_211742.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285043 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285043, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285043 BINDING SITE, designated SEQ ID:9938, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57048] Another function of GAM7957 is therefore inhibition of LOC285043 (Accession XP_211742.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285043.

[57049] LOC285058 (Accession XP_211753.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285058 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285058, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285058 BINDING SITE, designated SEQ ID:10474, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57050] Another function of GAM7957 is therefore inhibition of LOC285058 (Accession XP_211753.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285058.

[57051] LOC285082 (Accession XP_211759.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285082 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285082 BINDING SITE, designated SEQ ID:470, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57052] Another function of GAM7957 is therefore inhibition of

LOC285082 (Accession XP_211759.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285082.

[57053] LOC285083 (Accession XP_209464.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285083 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285083, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285083 BINDING SITE, designated SEQ ID:19057, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57054] Another function of GAM7957 is therefore inhibition of LOC285083 (Accession XP_209464.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285083.

[57055] LOC285094 (Accession XP_209471.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285094 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC285094, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285094 BINDING SITE, designated SEQ ID:8468, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57056] Another function of GAM7957 is therefore inhibition of LOC285094 (Accession XP_209471.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285094.

[57057] LOC285103 (Accession XP_211766.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285103 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285103 BINDING SITE, designated SEQ ID:4060, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57058] Another function of GAM7957 is therefore inhibition of LOC285103 (Accession XP_211766.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285103.

[57059] LOC285108 (Accession XP_209478.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285108 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285108, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285108 BINDING SITE, designated SEQ ID:12145, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57060] Another function of GAM7957 is therefore inhibition of LOC285108 (Accession XP_209478.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285108.

[57061] LOC285125 (Accession XP_211769.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC285125 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285125 BINDING SITE, designated SEQ ID:629, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57062] Another function of GAM7957 is therefore inhibition of LOC285125 (Accession XP_211769.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285125.

[57063] LOC285127 (Accession XP_211771.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285127 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285127, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285127 BINDING SITE, design-

nated SEQ ID:2936, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57064] Another function of GAM7957 is therefore inhibition of LOC285127 (Accession XP_211771.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285127.

[57065] LOC285151 (Accession XP_211782.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285151 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285151, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285151 BINDING SITE, designated SEQ ID:9735, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57066] Another function of GAM7957 is therefore inhibition of LOC285151 (Accession XP_211782.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285151.

[57067] LOC285166 (Accession XP_211791.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285166 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285166 BINDING SITE, designated SEQ ID:12791, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57068] Another function of GAM7957 is therefore inhibition of LOC285166 (Accession XP_211791.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285166.

[57069] LOC285167 (Accession XP_211790.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285167 BINDING SITE1 through LOC285167 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC285167, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285167 BINDING SITE1 through LOC285167 BINDING SITE4, designated SEQ ID:7413, SEQ ID:7557, SEQ ID:18453 and SEQ ID:15370 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57070] Another function of GAM7957 is therefore inhibition of LOC285167 (Accession XP_211790.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285167.

[57071] LOC285171 (Accession XP_211799.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285171 BINDING SITE1 through LOC285171 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC285171, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285171 BINDING SITE1 through LOC285171 BINDING SITE4, designated SEQ ID:5046, SEQ ID:19794, SEQ ID:13690 and SEQ ID:13155 respectively, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57072] Another function of GAM7957 is therefore inhibition of LOC285171 (Accession XP_211799.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285171.

[57073] LOC285216 (Accession XP_209520.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285216 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285216, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285216 BINDING SITE, designated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57074] Another function of GAM7957 is therefore inhibition of LOC285216 (Accession XP_209520.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285216.

[57075] LOC285219 (Accession XP_209518.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285219 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285219 BINDING SITE, designated SEQ ID:12792, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57076] Another function of GAM7957 is therefore inhibition of LOC285219 (Accession XP_209518.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285219.

[57077] LOC285222 (Accession XP_211809.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285222 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285222, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC285222 BINDING SITE, designated SEQ ID:9913, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57078] Another function of GAM7957 is therefore inhibition of LOC285222 (Accession XP_211809.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285222.

[57079] LOC285230 (Accession XP_211814.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285230 BINDING SITE1 and LOC285230 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285230, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285230 BINDING SITE1 and LOC285230 BINDING SITE2, designated SEQ ID:6423 and SEQ ID:2944 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57080] Another function of GAM7957 is therefore inhibition of LOC285230 (Accession XP_211814.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285230.

[57081] LOC285263 (Accession XP_209537.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285263 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285263, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285263 BINDING SITE, designated SEQ ID:7927, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57082] Another function of GAM7957 is therefore inhibition of LOC285263 (Accession XP_209537.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285263.

[57083] LOC285295 (Accession XP_211833.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285295 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC285295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285295 BINDING SITE, designated SEQ ID:5047, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57084] Another function of GAM7957 is therefore inhibition of LOC285295 (Accession XP_211833.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285295.

[57085] LOC285309 (Accession XP_211839.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285309 BINDING SITE1 and LOC285309 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285309, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285309 BINDING SITE1 and LOC285309 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:9203 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57086] Another function of GAM7957 is therefore inhibition of LOC285309 (Accession XP_211839.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285309.

[57087] LOC285332 (Accession XP_211845.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285332 BINDING SITE1 through LOC285332 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC285332, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285332 BINDING SITE1 through LOC285332 BINDING SITE3, designated SEQ ID:15405, SEQ ID:10634 and SEQ ID:10559 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57088] Another function of GAM7957 is therefore inhibition of LOC285332 (Accession XP_211845.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285332.

[57089] LOC285359 (Accession XP_211858.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285359 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285359, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285359 BINDING SITE, designated SEQ ID:15984, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57090] Another function of GAM7957 is therefore inhibition of LOC285359 (Accession XP_211858.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285359.

[57091] LOC285376 (Accession XP_211864.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285376 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285376 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57092] Another function of GAM7957 is therefore inhibition of LOC285376 (Accession XP_211864.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285376.

[57093] LOC285378 (Accession XP_211859.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC285378 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285378, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285378 BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57094] Another function of GAM7957 is therefore inhibition of LOC285378 (Accession XP_211859.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285378.

[57095] LOC285379 (Accession XP_211868.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285379 BINDING SITE1 and LOC285379 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285379, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285379 BINDING SITE1 and LOC285379 BINDING SITE2, design-

nated SEQ ID:1492 and SEQ ID:9203 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57096] Another function of GAM7957 is therefore inhibition of LOC285379 (Accession XP_211868.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285379.

[57097] LOC285387 (Accession XP_209588.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285387 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285387 BINDING SITE, designated SEQ ID:15219, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57098] Another function of GAM7957 is therefore inhibition of LOC285387 (Accession XP_209588.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285387.

[57099] LOC285395 (Accession XP_211875.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285395 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285395, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285395 BINDING SITE, designated SEQ ID:14204, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57100] Another function of GAM7957 is therefore inhibition of LOC285395 (Accession XP_211875.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285395.

[57101] LOC285404 (Accession XP_211885.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285404 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285404 BINDING SITE, designated SEQ ID:15520, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57102] Another function of GAM7957 is therefore inhibition of LOC285404 (Accession XP_211885.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285404.

[57103] LOC285408 (Accession XP_211886.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC285408 BINDING SITE1 and LOC285408 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285408, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285408 BINDING SITE1 and LOC285408 BINDING SITE2, designated SEQ ID:14360 and SEQ ID:14913 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57104] Another function of GAM7957 is therefore inhibition of

LOC285408 (Accession XP_211886.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285408.

[57105] LOC285447 (Accession XP_211900.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285447 BINDING SITE1 through LOC285447 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC285447, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285447 BINDING SITE1 through LOC285447 BINDING SITE4, designated SEQ ID:19799, SEQ ID:8585, SEQ ID:1571 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57106] Another function of GAM7957 is therefore inhibition of LOC285447 (Accession XP_211900.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285447.

[57107] LOC285465 (Accession XP_209622.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC285465 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285465, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285465 BINDING SITE, designated SEQ ID:13061, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57108] Another function of GAM7957 is therefore inhibition of LOC285465 (Accession XP_209622.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285465.

[57109] LOC285481 (Accession XP_211912.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285481 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285481, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285481 BINDING SITE, design-

nated SEQ ID:8189, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57110] Another function of GAM7957 is therefore inhibition of LOC285481 (Accession XP_211912.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285481.

[57111] LOC285484 (Accession XP_209630.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285484 BINDING SITE1 and LOC285484 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285484, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285484 BINDING SITE1 and LOC285484 BINDING SITE2, designated SEQ ID:6846 and SEQ ID:10306 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57112] Another function of GAM7957 is therefore inhibition of LOC285484 (Accession XP_209630.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285484.

[57113] LOC285485 (Accession XP_211913.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285485 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285485, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285485 BINDING SITE, designated SEQ ID:961, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57114] Another function of GAM7957 is therefore inhibition of LOC285485 (Accession XP_211913.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285485.

[57115] LOC285495 (Accession XP_211918.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285495 BINDING SITE1 and LOC285495 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285495, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285495 BINDING SITE1 and LOC285495 BINDING SITE2, designated SEQ ID:18458 and SEQ ID:8855 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57116] Another function of GAM7957 is therefore inhibition of LOC285495 (Accession XP_211918.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285495.

[57117] LOC285531 (Accession XP_211929.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285531 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285531 BINDING SITE, designated SEQ ID:837, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57118] Another function of GAM7957 is therefore inhibition of LOC285531 (Accession XP_211929.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285531.

[57119] LOC285592 (Accession XP_209669.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285592 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285592, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285592 BINDING SITE, designated SEQ ID:13066, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57120] Another function of GAM7957 is therefore inhibition of LOC285592 (Accession XP_209669.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285592.

[57121] LOC285594 (Accession XP_211946.2) is another GAM7957 target gene, herein designated TARGET GENE.

LOC285594 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285594, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285594 BINDING SITE, designated SEQ ID:13062, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57122] Another function of GAM7957 is therefore inhibition of LOC285594 (Accession XP_211946.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285594.

[57123] LOC285608 (Accession XP_211952.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285608 BINDING SITE1 through LOC285608 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC285608, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285608 BINDING SITE1 through LOC285608 BINDING SITE4, des-

ignated SEQ ID:2726, SEQ ID:4337, SEQ ID:17557 and SEQ ID:1965 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57124] Another function of GAM7957 is therefore inhibition of LOC285608 (Accession XP_211952.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285608.

[57125] LOC285614 (Accession XP_211953.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285614 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285614, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285614 BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57126] Another function of GAM7957 is therefore inhibition of LOC285614 (Accession XP_211953.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285614.

[57127] LOC285617 (Accession XP_211950.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285617 BINDING SITE1 and LOC285617 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285617, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285617 BINDING SITE1 and LOC285617 BINDING SITE2, designated SEQ ID:15207 and SEQ ID:11452 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57128] Another function of GAM7957 is therefore inhibition of LOC285617 (Accession XP_211950.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285617.

[57129] LOC285665 (Accession XP_211978.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285665 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC285665, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285665 BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57130] Another function of GAM7957 is therefore inhibition of LOC285665 (Accession XP_211978.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285665.

[57131] LOC285666 (Accession XP_211977.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285666 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285666, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285666 BINDING SITE, designated SEQ ID:13322, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57132] Another function of GAM7957 is therefore inhibition of LOC285666 (Accession XP_211977.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285666.

[57133] LOC285676 (Accession XP_209718.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285676 BINDING SITE1 and LOC285676 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285676, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285676 BINDING SITE1 and LOC285676 BINDING SITE2, designated SEQ ID:15108 and SEQ ID:10438 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57134] Another function of GAM7957 is therefore inhibition of LOC285676 (Accession XP_209718.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285676.

[57135] LOC285707 (Accession XP_211987.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC285707 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285707, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285707 BINDING SITE, designated SEQ ID:2856, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57136] Another function of GAM7957 is therefore inhibition of LOC285707 (Accession XP_211987.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285707.

[57137] LOC285713 (Accession XP_211992.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285713 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285713 BINDING SITE, design-

nated SEQ ID:12495, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57138] Another function of GAM7957 is therefore inhibition of LOC285713 (Accession XP_211992.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285713.

[57139] LOC285727 (Accession XP_212000.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285727 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285727 BINDING SITE, designated SEQ ID:1146, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57140] Another function of GAM7957 is therefore inhibition of LOC285727 (Accession XP_212000.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285727.

[57141] LOC285745 (Accession XP_212007.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285745 BINDING SITE1 and LOC285745 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285745, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285745 BINDING SITE1 and LOC285745 BINDING SITE2, designated SEQ ID:4824 and SEQ ID:19057 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57142] Another function of GAM7957 is therefore inhibition of LOC285745 (Accession XP_212007.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285745.

[57143] LOC285747 (Accession XP_209742.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285747 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285747, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285747 BINDING SITE, designated SEQ ID:9762, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57144] Another function of GAM7957 is therefore inhibition of LOC285747 (Accession XP_209742.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285747.

[57145] LOC285771 (Accession XP_212015.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285771 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC285771, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285771 BINDING SITE, designated SEQ ID:10490, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57146] Another function of GAM7957 is therefore inhibition of

LOC285771 (Accession XP_212015.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285771.

[57147] LOC285806 (Accession XP_212028.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285806 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285806, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285806 BINDING SITE, designated SEQ ID:2460, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57148] Another function of GAM7957 is therefore inhibition of LOC285806 (Accession XP_212028.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285806.

[57149] LOC285833 (Accession XP_209790.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285833 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC285833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285833 BINDING SITE, designated SEQ ID:5928, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57150] Another function of GAM7957 is therefore inhibition of LOC285833 (Accession XP_209790.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285833.

[57151] LOC285842 (Accession XP_212041.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285842 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285842 BINDING SITE, designated SEQ ID:13726, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57152] Another function of GAM7957 is therefore inhibition of LOC285842 (Accession XP_212041.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285842.

[57153] LOC285854 (Accession XP_209770.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285854 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285854, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285854 BINDING SITE, designated SEQ ID:8380, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57154] Another function of GAM7957 is therefore inhibition of LOC285854 (Accession XP_209770.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285854.

[57155] LOC285855 (Accession XP_209769.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC285855 BINDING SITE1 and LOC285855 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285855, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285855 BINDING SITE1 and LOC285855 BINDING SITE2, designated SEQ ID:3330 and SEQ ID:5929 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57156] Another function of GAM7957 is therefore inhibition of LOC285855 (Accession XP_209769.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285855.

[57157] LOC285859 (Accession XP_209775.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285859 BINDING SITE1 and LOC285859 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285859, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC285859 BINDING SITE1 and LOC285859 BINDING SITE2, designated SEQ ID:4206 and SEQ ID:15343 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57158] Another function of GAM7957 is therefore inhibition of LOC285859 (Accession XP_209775.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285859.

[57159] LOC285869 (Accession XP_212058.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285869 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285869, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285869 BINDING SITE, designated SEQ ID:14367, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57160] Another function of GAM7957 is therefore inhibition of LOC285869 (Accession XP_212058.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285869.

[57161] LOC285887 (Accession XP_212065.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285887 BINDING SITE1 and LOC285887 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285887, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285887 BINDING SITE1 and LOC285887 BINDING SITE2, designated SEQ ID:13063 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57162] Another function of GAM7957 is therefore inhibition of LOC285887 (Accession XP_212065.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285887.

[57163] LOC285909 (Accession XP_209811.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285909 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC285909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285909 BINDING SITE, designated SEQ ID:11641, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57164] Another function of GAM7957 is therefore inhibition of LOC285909 (Accession XP_209811.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285909.

[57165] LOC285912 (Accession XP_212078.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285912 BINDING SITE1 through LOC285912 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC285912, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285912 BINDING SITE1 through LOC285912 BINDING SITE3, designated SEQ ID:2159, SEQ ID:16843 and SEQ ID:16368 re-

spectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57166] Another function of GAM7957 is therefore inhibition of LOC285912 (Accession XP_212078.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285912.

[57167] LOC285913 (Accession XP_212074.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285913 BINDING SITE1 through LOC285913 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC285913, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285913 BINDING SITE1 through LOC285913 BINDING SITE3, designated SEQ ID:16843, SEQ ID:19036 and SEQ ID:16369 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57168] Another function of GAM7957 is therefore inhibition of LOC285913 (Accession XP_212074.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285913.

[57169] LOC285914 (Accession XP_209810.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285914 BINDING SITE1 and LOC285914 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285914, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285914 BINDING SITE1 and LOC285914 BINDING SITE2, designated SEQ ID:2306 and SEQ ID:7908 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57170] Another function of GAM7957 is therefore inhibition of LOC285914 (Accession XP_209810.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285914.

[57171] LOC285916 (Accession XP_212082.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285916 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC285916, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285916 BINDING SITE, designated SEQ ID:475, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57172] Another function of GAM7957 is therefore inhibition of LOC285916 (Accession XP_212082.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285916.

[57173] LOC285920 (Accession XP_212091.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285920 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285920, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285920 BINDING SITE, designated SEQ ID:15752, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57174] Another function of GAM7957 is therefore inhibition of LOC285920 (Accession XP_212091.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285920.

[57175] LOC285923 (Accession XP_212104.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285923 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285923, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285923 BINDING SITE, designated SEQ ID:9763, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57176] Another function of GAM7957 is therefore inhibition of LOC285923 (Accession XP_212104.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285923.

[57177] LOC285924 (Accession XP_209816.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC285924 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285924, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285924 BINDING SITE, designated SEQ ID:18617, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57178] Another function of GAM7957 is therefore inhibition of LOC285924 (Accession XP_209816.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285924.

[57179] LOC285931 (Accession NP_777609.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285931 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285931, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285931 BINDING SITE, designated SEQ ID:15676, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57180] Another function of GAM7957 is therefore inhibition of LOC285931 (Accession NP_777609.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285931.

[57181] LOC285953 (Accession XP_209820.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285953 BINDING SITE1 and LOC285953 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285953, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285953 BINDING SITE1 and LOC285953 BINDING SITE2, designated SEQ ID:7352 and SEQ ID:9781 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57182] Another function of GAM7957 is therefore inhibition of LOC285953 (Accession XP_209820.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285953.

[57183] LOC285960 (Accession XP_212088.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285960 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285960, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285960 BINDING SITE, designated SEQ ID:18690, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57184] Another function of GAM7957 is therefore inhibition of LOC285960 (Accession XP_212088.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285960.

[57185] LOC285987 (Accession XP_212127.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285987 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285987 BINDING SITE, designated SEQ ID:3055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57186] Another function of GAM7957 is therefore inhibition of LOC285987 (Accession XP_212127.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285987.

[57187] LOC285989 (Accession XP_212111.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285989 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285989, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285989 BINDING SITE, designated SEQ ID:11322, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57188] Another function of GAM7957 is therefore inhibition of LOC285989 (Accession XP_212111.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285989.

[57189] LOC285996 (Accession XP_212128.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC285996 BINDING SITE1 through LOC285996 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC285996, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285996 BINDING SITE1 through LOC285996 BINDING SITE3, designated SEQ ID:15983, SEQ ID:13066 and SEQ ID:15893 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57190] Another function of GAM7957 is therefore inhibition of LOC285996 (Accession XP_212128.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285996.

[57191] LOC286007 (Accession XP_212133.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC286007 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286007, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286007 BINDING SITE, designated SEQ ID:4082, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57192] Another function of GAM7957 is therefore inhibition of LOC286007 (Accession XP_212133.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286007.

[57193] LOC286029 (Accession XP_209866.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286029 BINDING SITE1 and LOC286029 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286029, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286029 BINDING SITE1 and LOC286029 BINDING SITE2, design-

nated SEQ ID:19031 and SEQ ID:11466 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57194] Another function of GAM7957 is therefore inhibition of LOC286029 (Accession XP_209866.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286029.

[57195] LOC286030 (Accession XP_209868.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286030 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286030, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286030 BINDING SITE, designated SEQ ID:925, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57196] Another function of GAM7957 is therefore inhibition of LOC286030 (Accession XP_209868.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286030.

[57197] LOC286039 (Accession XP_209873.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286039 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286039 BINDING SITE, designated SEQ ID:925, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57198] Another function of GAM7957 is therefore inhibition of LOC286039 (Accession XP_209873.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286039.

[57199] LOC286047 (Accession XP_209872.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286047 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286047, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286047 BINDING SITE, designated SEQ ID:4734, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57200] Another function of GAM7957 is therefore inhibition of LOC286047 (Accession XP_209872.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286047.

[57201] LOC286048 (Accession XP_212141.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC286048 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286048 BINDING SITE, designated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57202] Another function of GAM7957 is therefore inhibition of LOC286048 (Accession XP_212141.3) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286048.

[57203] LOC286075 (Accession NP_776192.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286075 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286075, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286075 BINDING SITE, designated SEQ ID:9871, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57204] Another function of GAM7957 is therefore inhibition of LOC286075 (Accession NP_776192.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286075.

[57205] LOC286112 (Accession XP_212176.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286112 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC286112, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286112 BINDING SITE, designated SEQ ID:4600, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57206] Another function of GAM7957 is therefore inhibition of LOC286112 (Accession XP_212176.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286112.

[57207] LOC286126 (Accession XP_212185.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286126 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286126, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286126 BINDING SITE, designated SEQ ID:8922, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57208] Another function of GAM7957 is therefore inhibition of LOC286126 (Accession XP_212185.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286126.

[57209] LOC286147 (Accession XP_212199.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC286147 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286147, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286147 BINDING SITE, designated SEQ ID:10132, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57210] Another function of GAM7957 is therefore inhibition of LOC286147 (Accession XP_212199.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286147.

[57211] LOC286154 (Accession XP_212204.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC286154 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286154 BINDING SITE, designated SEQ ID:2949, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57212] Another function of GAM7957 is therefore inhibition of LOC286154 (Accession XP_212204.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286154.

[57213] LOC286166 (Accession XP_209925.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286166 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286166 BINDING SITE, designated SEQ ID:9764, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57214] Another function of GAM7957 is therefore inhibition of LOC286166 (Accession XP_209925.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286166.

[57215] LOC286184 (Accession XP_212216.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286184 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286184 BINDING SITE, designated SEQ ID:6044, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57216] Another function of GAM7957 is therefore inhibition of LOC286184 (Accession XP_212216.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286184.

[57217] LOC286186 (Accession XP_212219.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286186 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286186 BINDING SITE, designated SEQ ID:3979, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57218] Another function of GAM7957 is therefore inhibition of LOC286186 (Accession XP_212219.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286186.

[57219] LOC286188 (Accession XP_209933.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286188 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286188, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC286188 BINDING SITE, designated SEQ ID:17423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57220] Another function of GAM7957 is therefore inhibition of LOC286188 (Accession XP_209933.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286188.

[57221] LOC286197 (Accession XP_209940.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286197 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286197 BINDING SITE, designated SEQ ID:12144, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57222] Another function of GAM7957 is therefore inhibition of LOC286197 (Accession XP_209940.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC286197.

[57223] LOC286206 (Accession XP_209953.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286206 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286206, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286206 BINDING SITE, designated SEQ ID:11327, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57224] Another function of GAM7957 is therefore inhibition of LOC286206 (Accession XP_209953.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286206.

[57225] LOC286208 (Accession XP_212230.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286208 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286208, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286208 BINDING SITE, designated SEQ ID:13066, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57226] Another function of GAM7957 is therefore inhibition of LOC286208 (Accession XP_212230.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286208.

[57227] LOC286218 (Accession XP_212235.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286218 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286218 BINDING SITE, designated SEQ ID:5322, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57228] Another function of GAM7957 is therefore inhibition of

LOC286218 (Accession XP_212235.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286218.

[57229] LOC286219 (Accession XP_212236.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286219 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286219 BINDING SITE, designated SEQ ID:19821, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57230] Another function of GAM7957 is therefore inhibition of LOC286219 (Accession XP_212236.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286219.

[57231] LOC286235 (Accession XP_212238.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286235 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC286235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286235 BINDING SITE, designated SEQ ID:8306, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57232] Another function of GAM7957 is therefore inhibition of LOC286235 (Accession XP_212238.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286235.

[57233] LOC286237 (Accession XP_212241.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286237 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286237, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286237 BINDING SITE, designated SEQ ID:12289, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57234] Another function of GAM7957 is therefore inhibition of LOC286237 (Accession XP_212241.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286237.

[57235] LOC286255 (Accession XP_209977.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286255 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286255, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286255 BINDING SITE, designated SEQ ID:13199, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57236] Another function of GAM7957 is therefore inhibition of LOC286255 (Accession XP_209977.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286255.

[57237] LOC286258 (Accession XP_209972.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC286258 BINDING SITE1 and LOC286258 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286258, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286258 BINDING SITE1 and LOC286258 BINDING SITE2, designated SEQ ID:10659 and SEQ ID:17108 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57238] Another function of GAM7957 is therefore inhibition of LOC286258 (Accession XP_209972.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286258.

[57239] LOC286260 (Accession XP_209976.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286260 BINDING SITE1 and LOC286260 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286260, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC286260 BINDING SITE1 and LOC286260 BINDING SITE2, designated SEQ ID:15984 and SEQ ID:2924 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57240] Another function of GAM7957 is therefore inhibition of LOC286260 (Accession XP_209976.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286260.

[57241] LOC286337 (Accession XP_212274.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC286337 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286337 BINDING SITE, designated SEQ ID:15675, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57242] Another function of GAM7957 is therefore inhibition of LOC286337 (Accession XP_212274.3) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286337.

[57243] LOC286341 (Accession XP_212278.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286341 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286341, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286341 BINDING SITE, designated SEQ ID:7590, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57244] Another function of GAM7957 is therefore inhibition of LOC286341 (Accession XP_212278.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286341.

[57245] LOC286356 (Accession XP_212290.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286356 BINDING SITE1 and LOC286356 BINDING SITE2 are target binding sites found in untranslated re-

gions of mRNA encoded by LOC286356, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286356 BINDING SITE1 and LOC286356 BINDING SITE2, designated SEQ ID:16262 and SEQ ID:3561 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57246] Another function of GAM7957 is therefore inhibition of LOC286356 (Accession XP_212290.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286356.

[57247] LOC286372 (Accession XP_212294.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286372 BINDING SITE1 and LOC286372 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286372, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286372 BINDING SITE1 and LOC286372 BINDING SITE2, designated SEQ ID:13155 and SEQ ID:9990 respectively, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57248] Another function of GAM7957 is therefore inhibition of LOC286372 (Accession XP_212294.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286372.

[57249] LOC286374 (Accession XP_212293.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286374 BINDING SITE1 and LOC286374 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286374, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286374 BINDING SITE1 and LOC286374 BINDING SITE2, designated SEQ ID:15343 and SEQ ID:14789 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57250] Another function of GAM7957 is therefore inhibition of LOC286374 (Accession XP_212293.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286374.

[57251] LOC286376 (Accession XP_210027.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286376 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286376 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57252] Another function of GAM7957 is therefore inhibition of LOC286376 (Accession XP_210027.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286376.

[57253] LOC286395 (Accession XP_212308.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286395 BINDING SITE1 through LOC286395 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC286395, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286395 BINDING SITE1 through LOC286395 BINDING SITE3, designated SEQ ID:14790, SEQ ID:3091 and SEQ ID:13180 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57254] Another function of GAM7957 is therefore inhibition of LOC286395 (Accession XP_212308.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286395.

[57255] LOC286404 (Accession XP_210036.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286404 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC286404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286404 BINDING SITE, designated SEQ ID:7351, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57256] Another function of GAM7957 is therefore inhibition of

LOC286404 (Accession XP_210036.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286404.

[57257] LOC286411 (Accession XP_212312.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286411 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286411, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286411 BINDING SITE, designated SEQ ID:19200, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57258] Another function of GAM7957 is therefore inhibition of LOC286411 (Accession XP_212312.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286411.

[57259] LOC286416 (Accession XP_210041.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286416 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC286416, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286416 BINDING SITE, designated SEQ ID:3830, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57260] Another function of GAM7957 is therefore inhibition of LOC286416 (Accession XP_210041.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286416.

[57261] LOC286431 (Accession XP_212316.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286431 BINDING SITE1 and LOC286431 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286431, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286431 BINDING SITE1 and LOC286431 BINDING SITE2, designated SEQ ID:8014 and SEQ ID:6817 respectively, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57262] Another function of GAM7957 is therefore inhibition of LOC286431 (Accession XP_212316.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286431.

[57263] LOC286435 (Accession XP_210047.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286435 BINDING SITE1 through LOC286435 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC286435, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286435 BINDING SITE1 through LOC286435 BINDING SITE3, designated SEQ ID:9769, SEQ ID:13491 and SEQ ID:5210 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57264] Another function of GAM7957 is therefore inhibition of LOC286435 (Accession XP_210047.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286435.

[57265] LOC286470 (Accession XP_212325.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286470 BINDING SITE1 and LOC286470 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286470, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286470 BINDING SITE1 and LOC286470 BINDING SITE2, designated SEQ ID:17423 and SEQ ID:6500 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57266] Another function of GAM7957 is therefore inhibition of LOC286470 (Accession XP_212325.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286470.

[57267] LOC286486 (Accession XP_210077.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286486 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286486, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286486 BINDING SITE, designated SEQ ID:2822, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57268] Another function of GAM7957 is therefore inhibition of LOC286486 (Accession XP_210077.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286486.

[57269] LOC286530 (Accession NP_835230.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC286530 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC286530, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286530 BINDING SITE, designated SEQ ID:8258, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57270] Another function of GAM7957 is therefore inhibition of

LOC286530 (Accession NP_835230.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286530.

[57271] LOC338545 (Accession XP_294650.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338545 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338545, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338545 BINDING SITE, designated SEQ ID:11411, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57272] Another function of GAM7957 is therefore inhibition of LOC338545 (Accession XP_294650.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338545.

[57273] LOC338549 (Accession XP_294651.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338549 BINDING SITE1 through LOC338549 BINDING

SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC338549, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338549 BINDING SITE1 through LOC338549 BINDING SITE3, designated SEQ ID:5588, SEQ ID:10572 and SEQ ID:3956 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57274] Another function of GAM7957 is therefore inhibition of LOC338549 (Accession XP_294651.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338549.

[57275] LOC338593 (Accession XP_290481.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338593 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338593, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338593 BINDING SITE, designated SEQ ID:7048, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57276] Another function of GAM7957 is therefore inhibition of LOC338593 (Accession XP_290481.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338593.

[57277] LOC338594 (Accession XP_294660.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338594 BINDING SITE1 and LOC338594 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338594, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338594 BINDING SITE1 and LOC338594 BINDING SITE2, designated SEQ ID:17423 and SEQ ID:15837 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57278] Another function of GAM7957 is therefore inhibition of LOC338594 (Accession XP_294660.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC338594.

[57279] LOC338604 (Accession XP_294665.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338604 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC338604, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338604 BINDING SITE, designated SEQ ID:4376, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57280] Another function of GAM7957 is therefore inhibition of LOC338604 (Accession XP_294665.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338604.

[57281] LOC338690 (Accession XP_290518.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338690 BINDING SITE1 and LOC338690 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338690, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338690 BINDING SITE1 and LOC338690 BINDING SITE2, designated SEQ ID:14785 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57282] Another function of GAM7957 is therefore inhibition of LOC338690 (Accession XP_290518.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338690.

[57283] LOC338837 (Accession XP_294725.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338837 BINDING SITE1 and LOC338837 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338837, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338837 BINDING SITE1 and LOC338837 BINDING SITE2, designated SEQ ID:12726 and SEQ ID:18690 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57284] Another function of GAM7957 is therefore inhibition of LOC338837 (Accession XP_294725.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338837.

[57285] LOC338866 (Accession XP_294736.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338866 BINDING SITE1 and LOC338866 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338866, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338866 BINDING SITE1 and LOC338866 BINDING SITE2, designated SEQ ID:9815 and SEQ ID:11040 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57286] Another function of GAM7957 is therefore inhibition of LOC338866 (Accession XP_294736.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338866.

[57287] LOC338910 (Accession XP_290630.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC338910 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338910, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338910 BINDING SITE, designated SEQ ID:6154, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57288] Another function of GAM7957 is therefore inhibition of LOC338910 (Accession XP_290630.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338910.

[57289] LOC338923 (Accession XP_294742.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338923 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC338923, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338923 BINDING SITE, design-

nated SEQ ID:15384, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57290] Another function of GAM7957 is therefore inhibition of LOC338923 (Accession XP_294742.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338923.

[57291] LOC338963 (Accession XP_294757.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338963 BINDING SITE1 and LOC338963 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338963, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338963 BINDING SITE1 and LOC338963 BINDING SITE2, designated SEQ ID:6095 and SEQ ID:12559 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57292] Another function of GAM7957 is therefore inhibition of LOC338963 (Accession XP_294757.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC338963.

[57293] LOC338976 (Accession XP_294762.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338976 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC338976, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338976 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57294] Another function of GAM7957 is therefore inhibition of LOC338976 (Accession XP_294762.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338976.

[57295] LOC338991 (Accession XP_290663.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338991 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC338991, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338991 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57296] Another function of GAM7957 is therefore inhibition of LOC338991 (Accession XP_290663.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338991.

[57297] LOC338999 (Accession XP_290659.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC338999 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338999 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57298] Another function of GAM7957 is therefore inhibition of

LOC338999 (Accession XP_290659.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338999.

[57299] LOC339059 (Accession XP_290682.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339059 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339059, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339059 BINDING SITE, designated SEQ ID:7867, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57300] Another function of GAM7957 is therefore inhibition of LOC339059 (Accession XP_290682.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339059.

[57301] LOC339071 (Accession XP_294800.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339071 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC339071, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339071 BINDING SITE, designated SEQ ID:14359, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57302] Another function of GAM7957 is therefore inhibition of LOC339071 (Accession XP_294800.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339071.

[57303] LOC339078 (Accession XP_290692.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339078 BINDING SITE1 and LOC339078 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339078, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339078 BINDING SITE1 and LOC339078 BINDING SITE2, designated SEQ ID:6790 and SEQ ID:12011 respectively, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57304] Another function of GAM7957 is therefore inhibition of LOC339078 (Accession XP_290692.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339078.

[57305] LOC339083 (Accession XP_290697.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC339083 BINDING SITE1 through LOC339083 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC339083, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339083 BINDING SITE1 through LOC339083 BINDING SITE4, designated SEQ ID:12337, SEQ ID:13093, SEQ ID:9420 and SEQ ID:2987 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57306] Another function of GAM7957 is therefore inhibition of LOC339083 (Accession XP_290697.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339083.

[57307] LOC339111 (Accession XP_294813.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC339111 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339111, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339111 BINDING SITE, designated SEQ ID:10720, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57308] Another function of GAM7957 is therefore inhibition of LOC339111 (Accession XP_294813.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339111.

[57309] LOC339130 (Accession XP_290723.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC339130 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339130, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339130 BINDING SITE, designated SEQ ID:10489, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57310] Another function of GAM7957 is therefore inhibition of LOC339130 (Accession XP_290723.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339130.

[57311] LOC339146 (Accession XP_294825.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339146 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339146 BINDING SITE, designated SEQ ID:19056, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57312] Another function of GAM7957 is therefore inhibition of

LOC339146 (Accession XP_294825.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339146.

[57313] LOC339152 (Accession XP_294829.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339152 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339152, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339152 BINDING SITE, designated SEQ ID:4314, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57314] Another function of GAM7957 is therefore inhibition of LOC339152 (Accession XP_294829.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339152.

[57315] LOC339184 (Accession XP_290743.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339184 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC339184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339184 BINDING SITE, designated SEQ ID:14392, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57316] Another function of GAM7957 is therefore inhibition of LOC339184 (Accession XP_290743.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339184.

[57317] LOC339199 (Accession XP_290759.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339199 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339199, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339199 BINDING SITE, designated SEQ ID:15984, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57318] Another function of GAM7957 is therefore inhibition of LOC339199 (Accession XP_290759.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339199.

[57319] LOC339216 (Accession XP_290762.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC339216 BINDING SITE1 and LOC339216 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339216, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339216 BINDING SITE1 and LOC339216 BINDING SITE2, designated SEQ ID:8019 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57320] Another function of GAM7957 is therefore inhibition of LOC339216 (Accession XP_290762.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339216.

[57321] LOC339223 (Accession XP_290774.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339223 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339223, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339223 BINDING SITE, designated SEQ ID:13438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57322] Another function of GAM7957 is therefore inhibition of LOC339223 (Accession XP_290774.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339223.

[57323] LOC339231 (Accession XP_290777.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339231 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC339231 BINDING SITE, designated SEQ ID:18686, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57324] Another function of GAM7957 is therefore inhibition of LOC339231 (Accession XP_290777.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339231.

[57325] LOC339238 (Accession XP_290784.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339238 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC339238, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339238 BINDING SITE, designated SEQ ID:18140, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57326] Another function of GAM7957 is therefore inhibition of LOC339238 (Accession XP_290784.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339238.

[57327] LOC339238 (Accession XP_290783.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339238 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC339238, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339238 BINDING SITE, designated SEQ ID:18140, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57328] Another function of GAM7957 is therefore inhibition of LOC339238 (Accession XP_290783.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339238.

[57329] LOC339282 (Accession XP_294900.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC339282 BINDING SITE1 and LOC339282 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339282, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339282 BINDING SITE1 and LOC339282 BINDING SITE2, designated SEQ ID:8019 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57330] Another function of GAM7957 is therefore inhibition of LOC339282 (Accession XP_294900.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339282.

[57331] LOC339290 (Accession XP_294901.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339290 BINDING SITE1 and LOC339290 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339290, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339290 BINDING SITE1 and LOC339290 BINDING SITE2, designated SEQ ID:1493 and SEQ ID:16582 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57332] Another function of GAM7957 is therefore inhibition of LOC339290 (Accession XP_294901.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339290.

[57333] LOC339327 (Accession XP_290819.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339327 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339327, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339327 BINDING SITE, designated SEQ ID:1686, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57334] Another function of GAM7957 is therefore inhibition of LOC339327 (Accession XP_290819.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339327.

[57335] LOC339343 (Accession XP_290846.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC339343 BINDING SITE1 and LOC339343 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339343, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339343 BINDING SITE1 and LOC339343 BINDING SITE2, designated SEQ ID:19994 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57336] Another function of GAM7957 is therefore inhibition of LOC339343 (Accession XP_290846.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339343.

[57337] LOC339373 (Accession XP_294921.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339373 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339373, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC339373 BINDING SITE, designated SEQ ID:4402, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57338] Another function of GAM7957 is therefore inhibition of LOC339373 (Accession XP_294921.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339373.

[57339] LOC339401 (Accession XP_294932.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339401 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339401, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339401 BINDING SITE, designated SEQ ID:14129, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57340] Another function of GAM7957 is therefore inhibition of LOC339401 (Accession XP_294932.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339401.

[57341] LOC339417 (Accession XP_294944.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339417 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339417, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339417 BINDING SITE, designated SEQ ID:14425, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57342] Another function of GAM7957 is therefore inhibition of LOC339417 (Accession XP_294944.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339417.

[57343] LOC339439 (Accession XP_294952.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC339439 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339439, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339439 BINDING SITE, designated SEQ ID:12654, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57344] Another function of GAM7957 is therefore inhibition of LOC339439 (Accession XP_294952.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339439.

[57345] LOC339452 (Accession XP_290903.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339452 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339452 BINDING SITE, designated SEQ ID:15409, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57346] Another function of GAM7957 is therefore inhibition of

LOC339452 (Accession XP_290903.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339452.

[57347] LOC339459 (Accession XP_290907.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC339459 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339459 BINDING SITE, designated SEQ ID:18690, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57348] Another function of GAM7957 is therefore inhibition of LOC339459 (Accession XP_290907.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339459.

[57349] LOC339462 (Accession XP_294966.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339462 BINDING SITE is a target binding site found in

the 5' untranslated region of mRNA encoded by LOC339462, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339462 BINDING SITE, designated SEQ ID:6550, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57350] Another function of GAM7957 is therefore inhibition of LOC339462 (Accession XP_294966.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339462.

[57351] LOC339492 (Accession XP_290919.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339492 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339492, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339492 BINDING SITE, designated SEQ ID:6390, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57352] Another function of GAM7957 is therefore inhibition of LOC339492 (Accession XP_290919.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339492.

[57353] LOC339493 (Accession XP_290927.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339493 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339493 BINDING SITE, designated SEQ ID:17699, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57354] Another function of GAM7957 is therefore inhibition of LOC339493 (Accession XP_290927.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339493.

[57355] LOC339494 (Accession XP_290925.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC339494 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339494, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339494 BINDING SITE, designated SEQ ID:13092, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57356] Another function of GAM7957 is therefore inhibition of LOC339494 (Accession XP_290925.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339494.

[57357] LOC339559 (Accession XP_290953.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339559 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339559, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339559 BINDING SITE, design-

nated SEQ ID:4458, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57358] Another function of GAM7957 is therefore inhibition of LOC339559 (Accession XP_290953.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339559.

[57359] LOC339587 (Accession XP_290957.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339587 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339587 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57360] Another function of GAM7957 is therefore inhibition of LOC339587 (Accession XP_290957.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC339587.

[57361] LOC339740 (Accession XP_290339.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339740 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339740, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339740 BINDING SITE, designated SEQ ID:10720, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57362] Another function of GAM7957 is therefore inhibition of LOC339740 (Accession XP_290339.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339740.

[57363] LOC339761 (Accession XP_291005.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339761 BINDING SITE1 through LOC339761 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC339761, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339761 BINDING SITE1 through LOC339761 BINDING SITE4, designated SEQ ID:4154, SEQ ID:12437, SEQ ID:17629 and SEQ ID:18770 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57364] Another function of GAM7957 is therefore inhibition of LOC339761 (Accession XP_291005.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339761.

[57365] LOC339803 (Accession XP_295072.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339803 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339803 BINDING SITE, designated SEQ ID:16895, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57366] Another function of GAM7957 is therefore inhibition of LOC339803 (Accession XP_295072.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339803.

[57367] LOC339808 (Accession XP_295071.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339808 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339808, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339808 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57368] Another function of GAM7957 is therefore inhibition of LOC339808 (Accession XP_295071.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339808.

[57369] LOC339809 (Accession XP_291020.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC339809 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339809, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339809 BINDING SITE, designated SEQ ID:13277, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57370] Another function of GAM7957 is therefore inhibition of LOC339809 (Accession XP_291020.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339809.

[57371] LOC339831 (Accession XP_295080.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339831 BINDING SITE1 and LOC339831 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339831, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339831 BINDING SITE1 and LOC339831 BINDING SITE2, design-

nated SEQ ID:13584 and SEQ ID:11987 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57372] Another function of GAM7957 is therefore inhibition of LOC339831 (Accession XP_295080.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339831.

[57373] LOC339832 (Accession XP_295079.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339832 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339832, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339832 BINDING SITE, designated SEQ ID:1325, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57374] Another function of GAM7957 is therefore inhibition of LOC339832 (Accession XP_295079.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC339832.

[57375] LOC339835 (Accession XP_291032.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339835 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC339835, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339835 BINDING SITE, designated SEQ ID:17278, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57376] Another function of GAM7957 is therefore inhibition of LOC339835 (Accession XP_291032.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339835.

[57377] LOC339841 (Accession XP_291038.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339841 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339841 BINDING SITE, designated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57378] Another function of GAM7957 is therefore inhibition of LOC339841 (Accession XP_291038.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339841.

[57379] LOC339852 (Accession XP_295086.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339852 BINDING SITE1 and LOC339852 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339852, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339852 BINDING SITE1 and LOC339852 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:1816 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57380] Another function of GAM7957 is therefore inhibition of

LOC339852 (Accession XP_295086.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339852.

[57381] LOC339855 (Accession XP_291041.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339855 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339855, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339855 BINDING SITE, designated SEQ ID:5805, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57382] Another function of GAM7957 is therefore inhibition of LOC339855 (Accession XP_291041.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339855.

[57383] LOC339865 (Accession XP_295089.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339865 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC339865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339865 BINDING SITE, designated SEQ ID:9765, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57384] Another function of GAM7957 is therefore inhibition of LOC339865 (Accession XP_295089.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339865.

[57385] LOC339887 (Accession XP_295094.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339887 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339887, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339887 BINDING SITE, designated SEQ ID:13689, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57386] Another function of GAM7957 is therefore inhibition of LOC339887 (Accession XP_295094.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339887.

[57387] LOC339929 (Accession XP_295105.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC339929 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC339929, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339929 BINDING SITE, designated SEQ ID:5256, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57388] Another function of GAM7957 is therefore inhibition of LOC339929 (Accession XP_295105.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339929.

[57389] LOC340038 (Accession XP_291125.2) is another

GAM7957 target gene, herein designated TARGET GENE. LOC340038 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340038, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340038 BINDING SITE, designated SEQ ID:9766, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57390] Another function of GAM7957 is therefore inhibition of LOC340038 (Accession XP_291125.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340038.

[57391] LOC340085 (Accession XP_295152.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340085 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340085, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340085 BINDING SITE, design-

nated SEQ ID:11266, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57392] Another function of GAM7957 is therefore inhibition of LOC340085 (Accession XP_295152.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340085.

[57393] LOC340087 (Accession XP_295153.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340087 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340087, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340087 BINDING SITE, designated SEQ ID:3445, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57394] Another function of GAM7957 is therefore inhibition of LOC340087 (Accession XP_295153.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340087.

[57395] LOC340128 (Accession XP_295164.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC340128 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340128 BINDING SITE, designated SEQ ID:12654, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57396] Another function of GAM7957 is therefore inhibition of LOC340128 (Accession XP_295164.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340128.

[57397] LOC340133 (Accession XP_291151.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340133 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340133, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340133 BINDING SITE, designated SEQ ID:12306, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57398] Another function of GAM7957 is therefore inhibition of LOC340133 (Accession XP_291151.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340133.

[57399] LOC340138 (Accession XP_291153.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340138 BINDING SITE1 through LOC340138 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC340138, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340138 BINDING SITE1 through LOC340138 BINDING SITE3, designated SEQ ID:15675, SEQ ID:10571 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57400] Another function of GAM7957 is therefore inhibition of LOC340138 (Accession XP_291153.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340138.

[57401] LOC340153 (Accession XP_295176.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340153 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340153, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340153 BINDING SITE, designated SEQ ID:12654, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57402] Another function of GAM7957 is therefore inhibition of LOC340153 (Accession XP_295176.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340153.

[57403] LOC340184 (Accession XP_295183.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC340184 BINDING SITE1 and LOC340184 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC340184, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340184 BINDING SITE1 and LOC340184 BINDING SITE2, designated SEQ ID:19035 and SEQ ID:8198 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57404] Another function of GAM7957 is therefore inhibition of LOC340184 (Accession XP_295183.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340184.

[57405] LOC340208 (Accession XP_295187.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340208 BINDING SITE1 through LOC340208 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC340208, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340208

BINDING SITE1 through LOC340208 BINDING SITE3, designated SEQ ID:15108, SEQ ID:9994 and SEQ ID:14091 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57406] Another function of GAM7957 is therefore inhibition of LOC340208 (Accession XP_295187.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340208.

[57407] LOC340319 (Accession XP_295216.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340319 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340319, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340319 BINDING SITE, designated SEQ ID:3560, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57408] Another function of GAM7957 is therefore inhibition of LOC340319 (Accession XP_295216.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC340319.

[57409] LOC340321 (Accession XP_295212.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340321 BINDING SITE1 and LOC340321 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC340321, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340321 BINDING SITE1 and LOC340321 BINDING SITE2, designated SEQ ID:13857 and SEQ ID:8552 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57410] Another function of GAM7957 is therefore inhibition of LOC340321 (Accession XP_295212.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340321.

[57411] LOC340324 (Accession XP_290402.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340324 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC340324, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340324 BINDING SITE, designated SEQ ID:9208, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57412] Another function of GAM7957 is therefore inhibition of LOC340324 (Accession XP_290402.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340324.

[57413] LOC340335 (Accession XP_295218.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340335 BINDING SITE1 and LOC340335 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC340335, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340335 BINDING SITE1 and LOC340335 BINDING SITE2, designated SEQ ID:9767 and SEQ ID:12218 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57414] Another function of GAM7957 is therefore inhibition of LOC340335 (Accession XP_295218.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340335.

[57415] LOC340353 (Accession XP_295221.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340353 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340353, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340353 BINDING SITE, designated SEQ ID:3934, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57416] Another function of GAM7957 is therefore inhibition of LOC340353 (Accession XP_295221.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340353.

[57417] LOC340362 (Accession XP_295225.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC340362 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340362, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340362 BINDING SITE, designated SEQ ID:15223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57418] Another function of GAM7957 is therefore inhibition of LOC340362 (Accession XP_295225.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340362.

[57419] LOC340390 (Accession XP_291269.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340390 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340390, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340390 BINDING SITE, design-

nated SEQ ID:15468, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57420] Another function of GAM7957 is therefore inhibition of LOC340390 (Accession XP_291269.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340390.

[57421] LOC340394 (Accession XP_295235.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340394 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340394 BINDING SITE, designated SEQ ID:12796, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57422] Another function of GAM7957 is therefore inhibition of LOC340394 (Accession XP_295235.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340394.

[57423] LOC340408 (Accession XP_291274.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340408 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340408 BINDING SITE, designated SEQ ID:925, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57424] Another function of GAM7957 is therefore inhibition of LOC340408 (Accession XP_291274.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340408.

[57425] LOC340414 (Accession XP_295240.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340414 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340414, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340414 BINDING SITE, designated SEQ ID:4087, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57426] Another function of GAM7957 is therefore inhibition of LOC340414 (Accession XP_295240.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340414.

[57427] LOC340456 (Accession XP_291298.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340456 BINDING SITE, designated SEQ ID:19885, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57428] Another function of GAM7957 is therefore inhibition of LOC340456 (Accession XP_291298.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340456.

[57429] LOC340494 (Accession XP_290428.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340494 BINDING SITE1 and LOC340494 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC340494, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340494 BINDING SITE1 and LOC340494 BINDING SITE2, designated SEQ ID:7183 and SEQ ID:10536 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57430] Another function of GAM7957 is therefore inhibition of LOC340494 (Accession XP_290428.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340494.

[57431] LOC340547 (Accession XP_291331.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340547 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC340547, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340547 BINDING SITE, designated SEQ ID:15984, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57432] Another function of GAM7957 is therefore inhibition of LOC340547 (Accession XP_291331.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340547.

[57433] LOC340615 (Accession XP_294645.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC340615 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340615, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340615 BINDING SITE, designated SEQ ID:1950, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57434] Another function of GAM7957 is therefore inhibition of LOC340615 (Accession XP_294645.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340615.

[57435] LOC343788 (Accession XP_297855.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC343788 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC343788, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343788 BINDING SITE, designated SEQ ID:3216, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57436] Another function of GAM7957 is therefore inhibition of LOC343788 (Accession XP_297855.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343788.

[57437] LOC346110 (Accession XP_299316.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC346110 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC346110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346110 BINDING SITE, designated SEQ ID:5901, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57438] Another function of GAM7957 is therefore inhibition of LOC346110 (Accession XP_299316.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346110.

[57439] LOC347758 (Accession XP_300253.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC347758 BINDING SITE1 and LOC347758 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC347758, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347758

BINDING SITE1 and LOC347758 BINDING SITE2, designated SEQ ID:8739 and SEQ ID:12606 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57440] Another function of GAM7957 is therefore inhibition of LOC347758 (Accession XP_300253.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347758.

[57441] LOC347759 (Accession XP_084325.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC347759 BINDING SITE1 and LOC347759 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC347759, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347759 BINDING SITE1 and LOC347759 BINDING SITE2, designated SEQ ID:12061 and SEQ ID:14817 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57442] Another function of GAM7957 is therefore inhibition of LOC347759 (Accession XP_084325.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347759.

[57443] LOC347971 (Accession XP_302639.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC347971 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC347971, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347971 BINDING SITE, designated SEQ ID:1911, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57444] Another function of GAM7957 is therefore inhibition of LOC347971 (Accession XP_302639.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347971.

[57445] LOC348071 (Accession XP_300620.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348071 BINDING SITE1 and LOC348071 BINDING SITE2 are target binding sites found in untranslated re-

gions of mRNA encoded by LOC348071, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348071 BINDING SITE1 and LOC348071 BINDING SITE2, designated SEQ ID:2678 and SEQ ID:15592 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57446] Another function of GAM7957 is therefore inhibition of LOC348071 (Accession XP_300620.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348071.

[57447] LOC348072 (Accession XP_302652.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348072 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348072, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348072 BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57448] Another function of GAM7957 is therefore inhibition of LOC348072 (Accession XP_302652.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348072.

[57449] LOC348102 (Accession XP_302651.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348102 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348102 BINDING SITE, designated SEQ ID:13342, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57450] Another function of GAM7957 is therefore inhibition of LOC348102 (Accession XP_302651.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348102.

[57451] LOC348113 (Accession XP_300623.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC348113 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348113 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57452] Another function of GAM7957 is therefore inhibition of LOC348113 (Accession XP_300623.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348113.

[57453] LOC348125 (Accession XP_302665.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348125 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348125 BINDING SITE, design-

nated SEQ ID:6043, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57454] Another function of GAM7957 is therefore inhibition of LOC348125 (Accession XP_302665.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348125.

[57455] LOC348137 (Accession XP_300635.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348137 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348137 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57456] Another function of GAM7957 is therefore inhibition of LOC348137 (Accession XP_300635.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348137.

[57457] LOC348142 (Accession XP_300636.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348142 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348142 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57458] Another function of GAM7957 is therefore inhibition of LOC348142 (Accession XP_300636.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348142.

[57459] LOC348161 (Accession XP_208864.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348161 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348161 BINDING SITE, designated SEQ ID:3778, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57460] Another function of GAM7957 is therefore inhibition of LOC348161 (Accession XP_208864.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348161.

[57461] LOC348162 (Accession XP_300643.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348162 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348162, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348162 BINDING SITE, designated SEQ ID:16944, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57462] Another function of GAM7957 is therefore inhibition of LOC348162 (Accession XP_300643.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348162.

[57463] LOC348233 (Accession XP_302697.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348233 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348233, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348233 BINDING SITE, designated SEQ ID:7332, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57464] Another function of GAM7957 is therefore inhibition of LOC348233 (Accession XP_302697.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348233.

[57465] LOC348245 (Accession XP_209014.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348245 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC348245, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348245 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57466] Another function of GAM7957 is therefore inhibition of LOC348245 (Accession XP_209014.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348245.

[57467] LOC348261 (Accession XP_302704.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348261 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348261, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348261 BINDING SITE, designated SEQ ID:11153, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57468] Another function of GAM7957 is therefore inhibition of LOC348261 (Accession XP_302704.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348261.

[57469] LOC348264 (Accession XP_302706.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348264 BINDING SITE1 through LOC348264 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC348264, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348264 BINDING SITE1 through LOC348264 BINDING SITE4, designated SEQ ID:9499, SEQ ID:6470, SEQ ID:825 and SEQ ID:1479 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57470] Another function of GAM7957 is therefore inhibition of LOC348264 (Accession XP_302706.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348264.

[57471] LOC348265 (Accession XP_302705.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348265 BINDING SITE1 through LOC348265 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC348265, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348265 BINDING SITE1 through LOC348265 BINDING SITE4, designated SEQ ID:1479, SEQ ID:6470, SEQ ID:825 and SEQ ID:9499 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57472] Another function of GAM7957 is therefore inhibition of LOC348265 (Accession XP_302705.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348265.

[57473] LOC348369 (Accession XP_302732.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348369 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348369, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348369 BINDING SITE, designated SEQ ID:19588, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57474] Another function of GAM7957 is therefore inhibition of LOC348369 (Accession XP_302732.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348369.

[57475] LOC348378 (Accession XP_300723.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348378 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348378, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348378 BINDING SITE, designated SEQ ID:9275, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57476] Another function of GAM7957 is therefore inhibition of

LOC348378 (Accession XP_300723.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348378.

[57477] LOC348393 (Accession XP_302741.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348393 BINDING SITE1 and LOC348393 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348393, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348393 BINDING SITE1 and LOC348393 BINDING SITE2, designated SEQ ID:15307 and SEQ ID:15224 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57478] Another function of GAM7957 is therefore inhibition of LOC348393 (Accession XP_302741.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348393.

[57479] LOC348402 (Accession XP_300730.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC348402 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348402 BINDING SITE, designated SEQ ID:6390, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57480] Another function of GAM7957 is therefore inhibition of LOC348402 (Accession XP_300730.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348402.

[57481] LOC348442 (Accession XP_057659.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348442 BINDING SITE1 and LOC348442 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348442, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348442 BINDING SITE1 and LOC348442 BINDING SITE2, design-

nated SEQ ID:12210 and SEQ ID:1671 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57482] Another function of GAM7957 is therefore inhibition of LOC348442 (Accession XP_057659.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348442.

[57483] LOC348455 (Accession XP_302760.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348455 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348455, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348455 BINDING SITE, designated SEQ ID:18285, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57484] Another function of GAM7957 is therefore inhibition of LOC348455 (Accession XP_302760.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348455.

[57485] LOC348456 (Accession XP_302761.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348456 BINDING SITE1 and LOC348456 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348456, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348456 BINDING SITE1 and LOC348456 BINDING SITE2, designated SEQ ID:12336 and SEQ ID:2031 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57486] Another function of GAM7957 is therefore inhibition of LOC348456 (Accession XP_302761.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348456.

[57487] LOC348461 (Accession XP_302764.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348461 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348461, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348461 BINDING SITE, designated SEQ ID:7449, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57488] Another function of GAM7957 is therefore inhibition of LOC348461 (Accession XP_302764.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348461.

[57489] LOC348474 (Accession XP_209299.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC348474 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348474, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348474 BINDING SITE, designated SEQ ID:4185, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57490] Another function of GAM7957 is therefore inhibition of

LOC348474 (Accession XP_209299.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348474.

[57491] LOC348475 (Accession XP_300748.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348475 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348475 BINDING SITE, designated SEQ ID:5613, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57492] Another function of GAM7957 is therefore inhibition of LOC348475 (Accession XP_300748.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348475.

[57493] LOC348480 (Accession XP_302773.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348480 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC348480, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348480 BINDING SITE, designated SEQ ID:5321, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57494] Another function of GAM7957 is therefore inhibition of LOC348480 (Accession XP_302773.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348480.

[57495] LOC348482 (Accession XP_300753.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348482 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348482, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348482 BINDING SITE, designated SEQ ID:5613, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[57496] Another function of GAM7957 is therefore inhibition of LOC348482 (Accession XP_300753.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348482.

[57497] LOC348488 (Accession XP_300352.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348488 BINDING SITE1 and LOC348488 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348488, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348488 BINDING SITE1 and LOC348488 BINDING SITE2, designated SEQ ID:19709 and SEQ ID:3203 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57498] Another function of GAM7957 is therefore inhibition of LOC348488 (Accession XP_300352.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348488.

[57499] LOC348496 (Accession XP_302795.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348496 BINDING SITE1 and LOC348496 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348496, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348496 BINDING SITE1 and LOC348496 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:7670 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57500] Another function of GAM7957 is therefore inhibition of LOC348496 (Accession XP_302795.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348496.

[57501] LOC348503 (Accession XP_300762.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348503 BINDING SITE1 and LOC348503 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348503, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348503 BINDING SITE1 and LOC348503 BINDING SITE2, designated SEQ ID:13988 and SEQ ID:9335 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57502] Another function of GAM7957 is therefore inhibition of LOC348503 (Accession XP_300762.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348503.

[57503] LOC348504 (Accession XP_300769.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348504 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348504, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348504 BINDING SITE, designated SEQ ID:17081, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57504] Another function of GAM7957 is therefore inhibition of

LOC348504 (Accession XP_300769.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348504.

[57505] LOC348520 (Accession XP_300772.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348520 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348520, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348520 BINDING SITE, designated SEQ ID:6989, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57506] Another function of GAM7957 is therefore inhibition of LOC348520 (Accession XP_300772.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348520.

[57507] LOC348522 (Accession XP_300774.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348522 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC348522, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348522 BINDING SITE, designated SEQ ID:15409, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57508] Another function of GAM7957 is therefore inhibition of LOC348522 (Accession XP_300774.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348522.

[57509] LOC348527 (Accession XP_300779.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348527 BINDING SITE1 through LOC348527 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC348527, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348527 BINDING SITE1 through LOC348527 BINDING SITE4, designated SEQ ID:12336, SEQ ID:2031, SEQ ID:3911 and SEQ

ID:18885 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57510] Another function of GAM7957 is therefore inhibition of LOC348527 (Accession XP_300779.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348527.

[57511] LOC348532 (Accession XP_302818.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348532 BINDING SITE1 and LOC348532 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348532, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348532 BINDING SITE1 and LOC348532 BINDING SITE2, designated SEQ ID:15307 and SEQ ID:15224 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57512] Another function of GAM7957 is therefore inhibition of LOC348532 (Accession XP_302818.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348532.

[57513] LOC348533 (Accession XP_302819.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348533 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348533, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348533 BINDING SITE, designated SEQ ID:12654, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57514] Another function of GAM7957 is therefore inhibition of LOC348533 (Accession XP_302819.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348533.

[57515] LOC348541 (Accession XP_302820.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348541 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348541, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348541 BINDING SITE, designated SEQ ID:13091, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57516] Another function of GAM7957 is therefore inhibition of LOC348541 (Accession XP_302820.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348541.

[57517] LOC348544 (Accession XP_300243.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348544 BINDING SITE1 through LOC348544 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC348544, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348544 BINDING SITE1 through LOC348544 BINDING SITE3, designated SEQ ID:16953, SEQ ID:5164 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57518] Another function of GAM7957 is therefore inhibition of LOC348544 (Accession XP_300243.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348544.

[57519] LOC348594 (Accession XP_302834.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348594 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348594, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348594 BINDING SITE, designated SEQ ID:16401, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57520] Another function of GAM7957 is therefore inhibition of LOC348594 (Accession XP_302834.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348594.

[57521] LOC348595 (Accession XP_302837.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC348595 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348595, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348595 BINDING SITE, designated SEQ ID:16401, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57522] Another function of GAM7957 is therefore inhibition of LOC348595 (Accession XP_302837.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348595.

[57523] LOC348603 (Accession XP_302844.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348603 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348603 BINDING SITE, designated SEQ ID:16401, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57524] Another function of GAM7957 is therefore inhibition of LOC348603 (Accession XP_302844.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348603.

[57525] LOC348605 (Accession XP_300793.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348605 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348605, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348605 BINDING SITE, designated SEQ ID:16401, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57526] Another function of GAM7957 is therefore inhibition of LOC348605 (Accession XP_300793.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348605.

[57527] LOC348629 (Accession XP_209400.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348629 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348629, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348629 BINDING SITE, designated SEQ ID:14111, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57528] Another function of GAM7957 is therefore inhibition of LOC348629 (Accession XP_209400.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348629.

[57529] LOC348699 (Accession XP_300816.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348699 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348699, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC348699 BINDING SITE, designated SEQ ID:15983, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57530] Another function of GAM7957 is therefore inhibition of LOC348699 (Accession XP_300816.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348699.

[57531] LOC348738 (Accession XP_300826.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348738 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348738, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348738 BINDING SITE, designated SEQ ID:7320, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57532] Another function of GAM7957 is therefore inhibition of LOC348738 (Accession XP_300826.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348738.

[57533] LOC348790 (Accession XP_300843.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348790 BINDING SITE1 and LOC348790 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348790, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348790 BINDING SITE1 and LOC348790 BINDING SITE2, designated SEQ ID:10423 and SEQ ID:16164 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57534] Another function of GAM7957 is therefore inhibition of LOC348790 (Accession XP_300843.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348790.

[57535] LOC348835 (Accession XP_302902.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348835 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC348835, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348835 BINDING SITE, designated SEQ ID:18336, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57536] Another function of GAM7957 is therefore inhibition of LOC348835 (Accession XP_302902.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348835.

[57537] LOC348843 (Accession XP_302903.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348843 BINDING SITE1 and LOC348843 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348843, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348843 BINDING SITE1 and LOC348843 BINDING SITE2, designated SEQ ID:19499 and SEQ ID:17081 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57538] Another function of GAM7957 is therefore inhibition of LOC348843 (Accession XP_302903.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348843.

[57539] LOC348899 (Accession XP_302914.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC348899 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC348899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348899 BINDING SITE, designated SEQ ID:8189, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57540] Another function of GAM7957 is therefore inhibition of LOC348899 (Accession XP_302914.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348899.

[57541] LOC349050 (Accession XP_300917.1) is another

GAM7957 target gene, herein designated TARGET GENE. LOC349050 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349050, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349050 BINDING SITE, designated SEQ ID:15984, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57542] Another function of GAM7957 is therefore inhibition of LOC349050 (Accession XP_300917.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349050.

[57543] LOC349063 (Accession XP_302949.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349063 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349063 BINDING SITE, design-

nated SEQ ID:14367, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57544] Another function of GAM7957 is therefore inhibition of LOC349063 (Accession XP_302949.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349063.

[57545] LOC349096 (Accession XP_300937.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349096 BINDING SITE1 and LOC349096 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC349096, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349096 BINDING SITE1 and LOC349096 BINDING SITE2, designated SEQ ID:7908 and SEQ ID:2306 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57546] Another function of GAM7957 is therefore inhibition of LOC349096 (Accession XP_300937.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC349096.

[57547] LOC349151 (Accession XP_302967.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349151 BINDING SITE1 and LOC349151 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC349151, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349151 BINDING SITE1 and LOC349151 BINDING SITE2, designated SEQ ID:9421 and SEQ ID:12920 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57548] Another function of GAM7957 is therefore inhibition of LOC349151 (Accession XP_302967.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349151.

[57549] LOC349169 (Accession XP_302978.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349169 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

LOC349169, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349169 BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57550] Another function of GAM7957 is therefore inhibition of LOC349169 (Accession XP_302978.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349169.

[57551] LOC349170 (Accession XP_300969.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349170 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349170 BINDING SITE, designated SEQ ID:4313, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57552] Another function of GAM7957 is therefore inhibition of LOC349170 (Accession XP_300969.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349170.

[57553] LOC349186 (Accession XP_302985.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349186 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349186 BINDING SITE, designated SEQ ID:10440, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57554] Another function of GAM7957 is therefore inhibition of LOC349186 (Accession XP_302985.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349186.

[57555] LOC349197 (Accession XP_300974.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC349197 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349197 BINDING SITE, designated SEQ ID:18689, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57556] Another function of GAM7957 is therefore inhibition of LOC349197 (Accession XP_300974.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349197.

[57557] LOC349276 (Accession XP_301005.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349276 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349276 BINDING SITE, designated SEQ ID:3491, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57558] Another function of GAM7957 is therefore inhibition of LOC349276 (Accession XP_301005.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349276.

[57559] LOC349282 (Accession XP_301008.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349282 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349282 BINDING SITE, designated SEQ ID:17262, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57560] Another function of GAM7957 is therefore inhibition of LOC349282 (Accession XP_301008.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349282.

[57561] LOC349298 (Accession XP_301016.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349298 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349298 BINDING SITE, designated SEQ ID:1755, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57562] Another function of GAM7957 is therefore inhibition of LOC349298 (Accession XP_301016.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349298.

[57563] LOC349313 (Accession XP_301024.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349313 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC349313 BINDING SITE, designated SEQ ID:17262, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57564] Another function of GAM7957 is therefore inhibition of LOC349313 (Accession XP_301024.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349313.

[57565] LOC349332 (Accession XP_301033.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349332 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349332, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349332 BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57566] Another function of GAM7957 is therefore inhibition of LOC349332 (Accession XP_301033.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC349332.

[57567] LOC349381 (Accession XP_303039.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349381 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC349381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349381 BINDING SITE, designated SEQ ID:11100, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57568] Another function of GAM7957 is therefore inhibition of LOC349381 (Accession XP_303039.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349381.

[57569] LOC349420 (Accession XP_301075.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349420 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349420, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349420 BINDING SITE, designated SEQ ID:18825, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57570] Another function of GAM7957 is therefore inhibition of LOC349420 (Accession XP_301075.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349420.

[57571] LOC349430 (Accession XP_301084.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349430 BINDING SITE1 through LOC349430 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC349430, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349430 BINDING SITE1 through LOC349430 BINDING SITE3, designated SEQ ID:9769, SEQ ID:13491 and SEQ ID:5210 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57572] Another function of GAM7957 is therefore inhibition of LOC349430 (Accession XP_301084.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349430.

[57573] LOC349432 (Accession XP_301086.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC349432 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349432 BINDING SITE, designated SEQ ID:13491, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57574] Another function of GAM7957 is therefore inhibition of LOC349432 (Accession XP_301086.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349432.

[57575] LOC349447 (Accession XP_088752.1) is another GAM7957 target gene, herein designated TARGET GENE.

LOC349447 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349447, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349447 BINDING SITE, designated SEQ ID:18709, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57576] Another function of GAM7957 is therefore inhibition of LOC349447 (Accession XP_088752.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349447.

[57577] LOC351012 (Accession XP_304617.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC351012 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC351012, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC351012 BINDING SITE, designated SEQ ID:10900, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57578] Another function of GAM7957 is therefore inhibition of LOC351012 (Accession XP_304617.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC351012.

[57579] LOC51145 (Accession NP_057242.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC51145 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51145, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51145 BINDING SITE, designated SEQ ID:12025, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57580] Another function of GAM7957 is therefore inhibition of LOC51145 (Accession NP_057242.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51145.

[57581] LOC51212 (Accession NP_057464.1) is another GAM7957

target gene, herein designated TARGET GENE. LOC51212 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51212, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51212 BINDING SITE, designated SEQ ID:7047, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57582] Another function of GAM7957 is therefore inhibition of LOC51212 (Accession NP_057464.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51212.

[57583] LOC51279 (Accession NP_057630.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC51279 BINDING SITE1 and LOC51279 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC51279, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51279 BINDING SITE1 and LOC51279 BINDING SITE2, designated SEQ ID:19061

and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57584] Another function of GAM7957 is therefore inhibition of LOC51279 (Accession NP_057630.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51279.

[57585] LOC51333 (Accession NP_057727.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC51333 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51333, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51333 BINDING SITE, designated SEQ ID:4982, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57586] Another function of GAM7957 is therefore inhibition of LOC51333 (Accession NP_057727.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51333.

[57587] LOC55974 (Accession NP_061333.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC55974 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC55974, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC55974 BINDING SITE, designated SEQ ID:15223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57588] Another function of GAM7957 is therefore inhibition of LOC55974 (Accession NP_061333.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC55974.

[57589] LOC57090 (Accession NP_065088.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC57090 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC57090, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC57090 BINDING SITE, designated SEQ ID:18987, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57590] Another function of GAM7957 is therefore inhibition of LOC57090 (Accession NP_065088.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC57090.

[57591] LOC63929 (Accession NP_071381.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC63929 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC63929, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC63929 BINDING SITE, designated SEQ ID:9770, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57592] Another function of GAM7957 is therefore inhibition of LOC63929 (Accession NP_071381.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC63929.

[57593] LOC64167 (Accession NP_071745.1) is another GAM7957

target gene, herein designated TARGET GENE. LOC64167 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC64167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC64167 BINDING SITE, designated SEQ ID:17267, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57594] Another function of GAM7957 is therefore inhibition of LOC64167 (Accession NP_071745.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC64167.

[57595] LOC81569 (Accession XP_030465.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC81569 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC81569, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC81569 BINDING SITE, designated SEQ ID:15437, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57596] Another function of GAM7957 is therefore inhibition of LOC81569 (Accession XP_030465.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC81569.

[57597] LOC83693 (Accession NP_113651.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC83693 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC83693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC83693 BINDING SITE, designated SEQ ID:17437, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57598] Another function of GAM7957 is therefore inhibition of LOC83693 (Accession NP_113651.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC83693.

[57599] LOC90120 (Accession XP_291299.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC90120

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC90120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90120 BINDING SITE, designated SEQ ID:19914, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57600] Another function of GAM7957 is therefore inhibition of LOC90120 (Accession XP_291299.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90120.

[57601] LOC90233 (Accession NP_612356.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC90233 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC90233, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90233 BINDING SITE, designated SEQ ID:14788, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57602] Another function of GAM7957 is therefore inhibition of LOC90233 (Accession NP_612356.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90233.

[57603] LOC90321 (Accession XP_030896.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC90321 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC90321, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90321 BINDING SITE, designated SEQ ID:2487, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57604] Another function of GAM7957 is therefore inhibition of LOC90321 (Accession XP_030896.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90321.

[57605] LOC90573 (Accession XP_032669.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC90573 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by LOC90573, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90573 BINDING SITE, designated SEQ ID:17837, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57606] Another function of GAM7957 is therefore inhibition of LOC90573 (Accession XP_032669.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90573.

[57607] LOC90784 (Accession XP_034109.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC90784 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC90784, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90784 BINDING SITE, designated SEQ ID:11847, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57608] Another function of GAM7957 is therefore inhibition of

LOC90784 (Accession XP_034109.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90784.

[57609] LOC90785 (Accession XP_034110.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC90785 BINDING SITE1 and LOC90785 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC90785, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90785 BINDING SITE1 and LOC90785 BINDING SITE2, designated SEQ ID:13437 and SEQ ID:12572 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57610] Another function of GAM7957 is therefore inhibition of LOC90785 (Accession XP_034110.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90785.

[57611] LOC90918 (Accession XP_034863.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC90918

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC90918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90918 BINDING SITE, designated SEQ ID:7710, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57612] Another function of GAM7957 is therefore inhibition of LOC90918 (Accession XP_034863.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90918.

[57613] LOC91035 (Accession XP_035622.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC91035 BINDING SITE1 and LOC91035 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC91035, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91035 BINDING SITE1 and LOC91035 BINDING SITE2, designated SEQ ID:16454 and SEQ ID:10462 respectively, to the nucleotide se-

quence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57614] Another function of GAM7957 is therefore inhibition of LOC91035 (Accession XP_035622.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91035.

[57615] LOC91056 (Accession NP_612377.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC91056 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LOC91056, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91056 BINDING SITE, designated SEQ ID:15158, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57616] Another function of GAM7957 is therefore inhibition of LOC91056 (Accession NP_612377.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91056.

[57617] LOC91250 (Accession XP_037135.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC91250 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC91250, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91250 BINDING SITE, designated SEQ ID:5988, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57618] Another function of GAM7957 is therefore inhibition of LOC91250 (Accession XP_037135.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91250.

[57619] LOC91319 (Accession XP_037686.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC91319 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC91319, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91319 BINDING SITE, designated SEQ ID:7955, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57620] Another function of GAM7957 is therefore inhibition of LOC91319 (Accession XP_037686.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91319.

[57621] LOC91526 (Accession NP_710181.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC91526 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC91526, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91526 BINDING SITE, designated SEQ ID:13402, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57622] Another function of GAM7957 is therefore inhibition of LOC91526 (Accession NP_710181.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91526.

[57623] LOC91862 (Accession NP_443090.1) is another GAM7957

target gene, herein designated TARGET GENE. LOC91862 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC91862, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91862 BINDING SITE, designated SEQ ID:6686, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57624] Another function of GAM7957 is therefore inhibition of LOC91862 (Accession NP_443090.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91862.

[57625] LOC92078 (Accession XP_042684.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92078 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92078 BINDING SITE, designated SEQ ID:15724, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57626] Another function of GAM7957 is therefore inhibition of LOC92078 (Accession XP_042684.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92078.

[57627] LOC92228 (Accession XP_043731.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92228 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92228 BINDING SITE, designated SEQ ID:9420, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57628] Another function of GAM7957 is therefore inhibition of LOC92228 (Accession XP_043731.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92228.

[57629] LOC92230 (Accession XP_043733.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92230

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC92230, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92230 BINDING SITE, designated SEQ ID:15751, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57630] Another function of GAM7957 is therefore inhibition of LOC92230 (Accession XP_043733.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92230.

[57631] LOC92235 (Accession XP_043739.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC92235 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92235 BINDING SITE, designated SEQ ID:1042, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57632] Another function of GAM7957 is therefore inhibition of LOC92235 (Accession XP_043739.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92235.

[57633] LOC92299 (Accession XP_044075.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92299 BINDING SITE1 and LOC92299 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC92299, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92299 BINDING SITE1 and LOC92299 BINDING SITE2, designated SEQ ID:8662 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57634] Another function of GAM7957 is therefore inhibition of LOC92299 (Accession XP_044075.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92299.

[57635] LOC92312 (Accession XP_044166.4) is another GAM7957

target gene, herein designated TARGET GENE. LOC92312 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92312, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92312 BINDING SITE, designated SEQ ID:15597, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57636] Another function of GAM7957 is therefore inhibition of LOC92312 (Accession XP_044166.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92312.

[57637] LOC92360 (Accession XP_044589.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92360 BINDING SITE1 and LOC92360 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC92360, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92360 BINDING SITE1 and LOC92360 BINDING SITE2, designated SEQ ID:11410

and SEQ ID:722 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57638] Another function of GAM7957 is therefore inhibition of LOC92360 (Accession XP_044589.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92360.

[57639] LOC92405 (Accession XP_044914.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92405 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92405, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92405 BINDING SITE, designated SEQ ID:12688, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57640] Another function of GAM7957 is therefore inhibition of LOC92405 (Accession XP_044914.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92405.

[57641] LOC92482 (Accession XP_045310.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92482 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92482, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92482 BINDING SITE, designated SEQ ID:15548, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57642] Another function of GAM7957 is therefore inhibition of LOC92482 (Accession XP_045310.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92482.

[57643] LOC92499 (Accession XP_045450.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC92499 BINDING SITE1 and LOC92499 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC92499, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92499 BINDING SITE1

and LOC92499 BINDING SITE2, designated SEQ ID:4848 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57644] Another function of GAM7957 is therefore inhibition of LOC92499 (Accession XP_045450.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92499.

[57645] LOC92659 (Accession XP_046434.3) is another GAM7957 target gene, herein designated TARGET GENE. LOC92659 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC92659, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92659 BINDING SITE, designated SEQ ID:11153, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57646] Another function of GAM7957 is therefore inhibition of LOC92659 (Accession XP_046434.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC92659.

[57647] LOC92973 (Accession XP_048529.2) is another GAM7957 target gene, herein designated TARGET GENE. LOC92973 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC92973, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92973 BINDING SITE, designated SEQ ID:12985, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57648] Another function of GAM7957 is therefore inhibition of LOC92973 (Accession XP_048529.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92973.

[57649] LOC93132 (Accession XP_049396.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC93132 BINDING SITE1 and LOC93132 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC93132, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC93132 BINDING SITE1 and LOC93132 BINDING SITE2, designated SEQ ID:10438 and SEQ ID:14699 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57650] Another function of GAM7957 is therefore inhibition of LOC93132 (Accession XP_049396.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93132.

[57651] LOC93613 (Accession XP_052568.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC93613 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC93613, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93613 BINDING SITE, designated SEQ ID:19262, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57652] Another function of GAM7957 is therefore inhibition of LOC93613 (Accession XP_052568.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC93613.

[57653] LOC94431 (Accession NP_660280.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC94431 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC94431, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC94431 BINDING SITE, designated SEQ ID:9856, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57654] Another function of GAM7957 is therefore inhibition of LOC94431 (Accession NP_660280.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC94431.

[57655] LOC96597 (Accession XP_039922.1) is another GAM7957 target gene, herein designated TARGET GENE. LOC96597 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC96597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC96597 BINDING SITE, designated SEQ ID:17714, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57656] Another function of GAM7957 is therefore inhibition of LOC96597 (Accession XP_039922.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC96597.

[57657] LOST1 (Accession NP_758955.1) is another GAM7957 target gene, herein designated TARGET GENE. LOST1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOST1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOST1 BINDING SITE, designated SEQ ID:1927, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57658] Another function of GAM7957 is therefore inhibition of LOST1 (Accession NP_758955.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOST1.

[57659] LRG (Accession NP_443204.1) is another GAM7957 target gene, herein designated TARGET GENE. LRG BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LRG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRG BINDING SITE, designated SEQ ID:16201, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57660] Another function of GAM7957 is therefore inhibition of LRG (Accession NP_443204.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRG.

[57661] Leucine-rich repeat-containing 2 (LRRC2, Accession NP_079026.2) is another GAM7957 target gene, herein designated TARGET GENE. LRRC2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LRRC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRRC2 BINDING SITE, designated SEQ ID:10418, to the nu-

cleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57662] Another function of GAM7957 is therefore inhibition of Leucine-rich repeat-containing 2 (LRRC2, Accession NP_079026.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRC2.

[57663] Leucine-rich repeat-containing 2 (LRRC2, Accession NP_078788.1) is another GAM7957 target gene, herein designated TARGET GENE. LRRC2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by LRRC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRRC2 BINDING SITE, designated SEQ ID:10418, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57664] Another function of GAM7957 is therefore inhibition of Leucine-rich repeat-containing 2 (LRRC2, Accession NP_078788.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRC2.

[57665] Leucine rich repeat (in flil) interacting protein 1 (LRRFIP1, Accession NP_004726.1) is another GAM7957 target gene, herein designated TARGET GENE. LRRFIP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LRRFIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRRFIP1 BINDING SITE, designated SEQ ID:14509, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57666] Another function of GAM7957 is therefore inhibition of Leucine rich repeat (in flil) interacting protein 1 (LRRFIP1, Accession NP_004726.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRFIP1.

[57667] Leucine zipper protein 1 (LUZP1, Accession NP_361013.1) is another GAM7957 target gene, herein designated TARGET GENE. LUZP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LUZP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LUZP1 BINDING SITE, designated SEQ ID:9422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57668] Another function of GAM7957 is therefore inhibition of Leucine zipper protein 1 (LUZP1, Accession NP_361013.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LUZP1.

[57669] LYNX1 (Accession NP_076435.1) is another GAM7957 target gene, herein designated TARGET GENE. LYNX1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by LYNX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYNX1 BINDING SITE, designated SEQ ID:2417, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57670] Another function of GAM7957 is therefore inhibition of LYNX1 (Accession NP_076435.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with LYNX1.

[57671] LYNX1 (Accession NP_803252.1) is another GAM7957 target gene, herein designated TARGET GENE. LYNX1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by LYNX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYNX1 BINDING SITE, designated SEQ ID:2417, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57672] Another function of GAM7957 is therefore inhibition of LYNX1 (Accession NP_803252.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LYNX1.

[57673] LZLP (Accession NP_037476.1) is another GAM7957 target gene, herein designated TARGET GENE. LZLP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LZLP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LZLP BINDING

SITE, designated SEQ ID:16039, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57674] Another function of GAM7957 is therefore inhibition of LZLP (Accession NP_037476.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LZLP.

[57675] Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1) is another GAM7957 target gene, herein designated TARGET GENE. LZTS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LZTS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LZTS1 BINDING SITE, designated SEQ ID:8918, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57676] Another function of GAM7957 is therefore inhibition of Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1), a gene which is an essential component of the nucleoskeleton. potential role in crosslinking filaments or anchoring other molecules. it is essential

for growth. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LZTS1.

[57677] The function of LZTS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1. Microtubule-actin crosslinking factor 1 (MACF1, Accession NP_149033.1) is another GAM7957 target gene, herein designated TARGET GENE. MACF1 BINDING SITE1 and MACF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MACF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MACF1 BINDING SITE1 and MACF1 BINDING SITE2, designated SEQ ID:11920 and SEQ ID:1172 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57678] Another function of GAM7957 is therefore inhibition of Microtubule-actin crosslinking factor 1 (MACF1, Accession NP_149033.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with MACF1.

[57679] V-maf musculoaponeurotic fibrosarcoma oncogene homolog f (avian) (MAFF, Accession NP_036455.1) is another GAM7957 target gene, herein designated TARGET GENE. MAFF BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MAFF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAFF BINDING SITE, designated SEQ ID:5558, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57680] Another function of GAM7957 is therefore inhibition of V-maf musculoaponeurotic fibrosarcoma oncogene homolog f (avian) (MAFF, Accession NP_036455.1), a gene which binds to the US-2 motif of the oxytocin receptor gene; has a leucine zipper structure. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAFF.

[57681] The function of MAFF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM200.1.V-maf musculoaponeurotic fibrosarcoma oncogene homolog f (avian) (MAFF, Accession NP_690617.1) is another GAM7957 target gene, herein designated TARGET GENE. MAFF BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MAFF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAFF BINDING SITE, designated SEQ ID:5558, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57682] Another function of GAM7957 is therefore inhibition of V-maf musculoaponeurotic fibrosarcoma oncogene homolog f (avian) (MAFF, Accession NP_690617.1), a gene which Binds to the US- 2 motif of the oxytocin receptor gene; has a leucine zipper structure. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAFF.

[57683] The function of MAFF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM200.1.Mal, t-cell differentiation protein 2 (MAL2,

Accession NP_443118.1) is another GAM7957 target gene, herein designated TARGET GENE. MAL2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MAL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAL2 BINDING SITE, designated SEQ ID:6717, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57684] Another function of GAM7957 is therefore inhibition of Mal, t-cell differentiation protein 2 (MAL2, Accession NP_443118.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAL2.

[57685] Mitogen-activated protein kinase kinase 7 (MAP2K7, Accession NP_663302.1) is another GAM7957 target gene, herein designated TARGET GENE. MAP2K7 BINDING SITE1 and MAP2K7 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAP2K7, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of MAP2K7 BINDING SITE1 and MAP2K7 BINDING SITE2, designated SEQ ID:19795 and SEQ ID:8514 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57686] Another function of GAM7957 is therefore inhibition of Mitogen-activated protein kinase kinase 7 (MAP2K7, Accession NP_663302.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP2K7.

[57687] Mitogen-activated protein kinase kinase kinase 9 (MAP3K9, Accession XP_027237.1) is another GAM7957 target gene, herein designated TARGET GENE. MAP3K9 BINDING SITE1 through MAP3K9 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by MAP3K9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP3K9 BINDING SITE1 through MAP3K9 BINDING SITE3, designated SEQ ID:14786, SEQ ID:17642 and SEQ ID:9732 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57688] Another function of GAM7957 is therefore inhibition of Mitogen-activated protein kinase kinase kinase 9 (MAP3K9, Accession XP_027237.1), a gene which is a MIXED- LINEAGE KINASE 1. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K9.

[57689] The function of MAP3K9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Microtubule-associated protein 4 (MAP4, Accession NP_112146.1) is another GAM7957 target gene, herein designated TARGET GENE. MAP4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MAP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP4 BINDING SITE, designated SEQ ID:16329, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57690] Another function of GAM7957 is therefore inhibition of Microtubule-associated protein 4 (MAP4, Accession NP_112146.1), a gene which is a MICROTUBULE- ASSOCI-

ATED PROTEIN. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP4.

[57691] The function of MAP4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1. Microtubule-associated protein 4 (MAP4, Accession NP_112245.1) is another GAM7957 target gene, herein designated TARGET GENE. MAP4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MAP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP4 BINDING SITE, designated SEQ ID:16329, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57692] Another function of GAM7957 is therefore inhibition of Microtubule-associated protein 4 (MAP4, Accession NP_112245.1), a gene which is a MICROTUBULE- ASSOCIATED PROTEIN. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP4.

[57693] The function of MAP4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1. Microtubule-associated protein 4 (MAP4, Accession NP_002366.1) is another GAM7957 target gene, herein designated TARGET GENE. MAP4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MAP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP4 BINDING SITE, designated SEQ ID:16329, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57694] Another function of GAM7957 is therefore inhibition of Microtubule-associated protein 4 (MAP4, Accession NP_002366.1), a gene which is a MICROTUBULE- ASSOCIATED PROTEIN. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP4.

[57695] The function of MAP4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM401.1.Microtubule-associated protein 4 (MAP4, Accession NP_112147.1) is another GAM7957 target gene, herein designated TARGET GENE. MAP4 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MAP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP4 BINDING SITE, designated SEQ ID:16329, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57696] Another function of GAM7957 is therefore inhibition of Microtubule-associated protein 4 (MAP4, Accession NP_112147.1), a gene which is a MICROTUBULE- ASSOCIATED PROTEIN. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP4.

[57697] The function of MAP4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1.Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) is another GAM7957 target gene, herein designated TARGET

GENE. MAPK8IP3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MAPK8IP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK8IP3 BINDING SITE, designated SEQ ID:6843, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57698] Another function of GAM7957 is therefore inhibition of Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPK8IP3.

[57699] MAPKBP1 (Accession XP_031706.7) is another GAM7957 target gene, herein designated TARGET GENE. MAPKBP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAPKBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPKBP1 BINDING SITE, designated SEQ ID:8123, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57700] Another function of GAM7957 is therefore inhibition of MAPKBP1 (Accession XP_031706.7) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP-KBP1.

[57701] MAWBP (Accession NP_071412.1) is another GAM7957 target gene, herein designated TARGET GENE. MAWBP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAWBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAWBP BINDING SITE, designated SEQ ID:14181, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57702] Another function of GAM7957 is therefore inhibition of MAWBP (Accession NP_071412.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAWBP.

[57703] MBTD1 (Accession NP_060113.1) is another GAM7957 target gene, herein designated TARGET GENE. MBTD1

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MBTD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MBTD1 BINDING SITE, designated SEQ ID:2975, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57704] Another function of GAM7957 is therefore inhibition of MBTD1 (Accession NP_060113.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MBTD1.

[57705] Melanoma cell adhesion molecule (MCAM, Accession NP_006491.1) is another GAM7957 target gene, herein designated TARGET GENE. MCAM BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MCAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCAM BINDING SITE, designated SEQ ID:3363, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57706] Another function of GAM7957 is therefore inhibition of Melanoma cell adhesion molecule (MCAM, Accession NP_006491.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MCAM.

[57707] Mcm4 minichromosome maintenance deficient 4 (*s. cerevisiae*) (MCM4, Accession XP_030274.1) is another GAM7957 target gene, herein designated TARGET GENE. MCM4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MCM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCM4 BINDING SITE, designated SEQ ID:8108, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57708] Another function of GAM7957 is therefore inhibition of Mcm4 minichromosome maintenance deficient 4 (*s. cerevisiae*) (MCM4, Accession XP_030274.1), a gene which involved in the control of dna replication. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MCM4.

[57709] The function of MCM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Methyl cpG binding protein 2 (retT syndrome) (MECP2, Accession NP_004983.1) is another GAM7957 target gene, herein designated TARGET GENE. MECP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MECP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MECP2 BINDING SITE, designated SEQ ID:3575, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57710] Another function of GAM7957 is therefore inhibition of Methyl cpG binding protein 2 (retT syndrome) (MECP2, Accession NP_004983.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MECP2.

[57711] MEGF10 (Accession NP_115822.1) is another GAM7957 target gene, herein designated TARGET GENE. MEGF10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MEGF10, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEGF10 BINDING SITE, designated SEQ ID:11788, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57712] Another function of GAM7957 is therefore inhibition of MEGF10 (Accession NP_115822.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEGF10.

[57713] MEGF11 (Accession NP_115821.1) is another GAM7957 target gene, herein designated TARGET GENE. MEGF11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MEGF11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEGF11 BINDING SITE, designated SEQ ID:5685, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57714] Another function of GAM7957 is therefore inhibition of MEGF11 (Accession NP_115821.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEGF11.

[57715] Multiple endocrine neoplasia i (MEN1, Accession NP_570715.1) is another GAM7957 target gene, herein designated TARGET GENE. MEN1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEN1 BINDING SITE, designated SEQ ID:7241, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57716] Another function of GAM7957 is therefore inhibition of Multiple endocrine neoplasia i (MEN1, Accession NP_570715.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEN1.

[57717] Multiple endocrine neoplasia i (MEN1, Accession NP_570716.1) is another GAM7957 target gene, herein designated TARGET GENE. MEN1 BINDING SITE is a target binding site found in the 5' untranslated region of multi-

ple transcripts of mRNA encoded by MEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEN1 BINDING SITE, designated SEQ ID:7241, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57718] Another function of GAM7957 is therefore inhibition of Multiple endocrine neoplasia i (MEN1, Accession NP_570716.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEN1.

[57719] MGC10200 (Accession NP_659497.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC10200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10200, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10200 BINDING SITE, designated SEQ ID:17423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57720] Another function of GAM7957 is therefore inhibition of

MGC10200 (Accession NP_659497.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10200.

[57721] MGC10765 (Accession NP_077321.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC10765 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC10765, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10765 BINDING SITE, designated SEQ ID:7629, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57722] Another function of GAM7957 is therefore inhibition of MGC10765 (Accession NP_077321.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10765.

[57723] MGC10771 (Accession NP_078782.2) is another GAM7957 target gene, herein designated TARGET GENE. MGC10771 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC10771, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10771 BINDING SITE, designated SEQ ID:19103, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57724] Another function of GAM7957 is therefore inhibition of MGC10771 (Accession NP_078782.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10771.

[57725] MGC10814 (Accession NP_116060.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC10814 BINDING SITE1 and MGC10814 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC10814, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10814 BINDING SITE1 and MGC10814 BINDING SITE2, designated SEQ ID:15216 and SEQ ID:14900 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57726] Another function of GAM7957 is therefore inhibition of MGC10814 (Accession NP_116060.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10814.

[57727] MGC10997 (Accession NP_116044.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC10997 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC10997, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10997 BINDING SITE, designated SEQ ID:10844, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57728] Another function of GAM7957 is therefore inhibition of MGC10997 (Accession NP_116044.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10997.

[57729] MGC10999 (Accession NP_115683.2) is another GAM7957 target gene, herein designated TARGET GENE. MGC10999 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC10999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10999 BINDING SITE, designated SEQ ID:11306, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57730] Another function of GAM7957 is therefore inhibition of MGC10999 (Accession NP_115683.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10999.

[57731] MGC1136 (Accession NP_076930.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC1136 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC1136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC1136 BINDING SITE, designated SEQ ID:15748, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57732] Another function of GAM7957 is therefore inhibition of

MGC1136 (Accession NP_076930.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC1136.

[57733] MGC11386 (Accession NP_116322.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC11386 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC11386, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC11386 BINDING SITE, designated SEQ ID:14786, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57734] Another function of GAM7957 is therefore inhibition of MGC11386 (Accession NP_116322.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11386.

[57735] MGC12945 (Accession NP_115694.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC12945 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC12945, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12945 BINDING SITE, designated SEQ ID:11532, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57736] Another function of GAM7957 is therefore inhibition of MGC12945 (Accession NP_115694.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12945.

[57737] MGC13024 (Accession NP_689501.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC13024 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC13024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13024 BINDING SITE, designated SEQ ID:804, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57738] Another function of GAM7957 is therefore inhibition of MGC13024 (Accession NP_689501.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13024.

[57739] MGC13053 (Accession NP_116099.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC13053 BINDING SITE1 and MGC13053 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC13053, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13053 BINDING SITE1 and MGC13053 BINDING SITE2, designated SEQ ID:8676 and SEQ ID:10475 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57740] Another function of GAM7957 is therefore inhibition of MGC13053 (Accession NP_116099.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13053.

[57741] MGC13272 (Accession NP_115731.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC13272 BINDING SITE is a target binding site found in the 5' un-

translated region of mRNA encoded by MGC13272, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13272 BINDING SITE, designated SEQ ID:2998, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57742] Another function of GAM7957 is therefore inhibition of MGC13272 (Accession NP_115731.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13272.

[57743] MGC14126 (Accession NP_116287.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC14126 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14126, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14126 BINDING SITE, designated SEQ ID:12370, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57744] Another function of GAM7957 is therefore inhibition of

MGC14126 (Accession NP_116287.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14126.

[57745] MGC14276 (Accession NP_694980.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC14276 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14276 BINDING SITE, designated SEQ ID:12189, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57746] Another function of GAM7957 is therefore inhibition of MGC14276 (Accession NP_694980.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14276.

[57747] MGC14407 (Accession NP_116297.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC14407 BINDING SITE1 and MGC14407 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by MGC14407, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14407 BINDING SITE1 and MGC14407 BINDING SITE2, designated SEQ ID:4378 and SEQ ID:10435 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57748] Another function of GAM7957 is therefore inhibition of MGC14407 (Accession NP_116297.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14407.

[57749] MGC14436 (Accession NP_116286.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC14436 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14436 BINDING SITE, designated SEQ ID:18050, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57750] Another function of GAM7957 is therefore inhibition of MGC14436 (Accession NP_116286.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14436.

[57751] MGC14799 (Accession NP_115712.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC14799 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14799, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14799 BINDING SITE, designated SEQ ID:6876, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57752] Another function of GAM7957 is therefore inhibition of MGC14799 (Accession NP_115712.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14799.

[57753] MGC14817 (Accession NP_115714.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC14817 BINDING SITE1 and MGC14817 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by MGC14817, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14817 BINDING SITE1 and MGC14817 BINDING SITE2, designated SEQ ID:6787 and SEQ ID:13584 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57754] Another function of GAM7957 is therefore inhibition of MGC14817 (Accession NP_115714.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14817.

[57755] MGC14836 (Accession NP_219480.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC14836 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC14836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14836 BINDING SITE, designated SEQ ID:17854, to the nucleotide sequence of GAM7957 RNA, herein design-

nated GAM RNA, also designated SEQ ID:297.

[57756] Another function of GAM7957 is therefore inhibition of MGC14836 (Accession NP_219480.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14836.

[57757] MGC15397 (Accession NP_542383.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC15397 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC15397, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15397 BINDING SITE, designated SEQ ID:15089, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57758] Another function of GAM7957 is therefore inhibition of MGC15397 (Accession NP_542383.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15397.

[57759] MGC16037 (Accession NP_116276.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC16037

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC16037, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16037 BINDING SITE, designated SEQ ID:10438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57760] Another function of GAM7957 is therefore inhibition of MGC16037 (Accession NP_116276.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16037.

[57761] MGC16142 (Accession NP_116152.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC16142 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC16142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16142 BINDING SITE, designated SEQ ID:14332, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57762] Another function of GAM7957 is therefore inhibition of MGC16142 (Accession NP_116152.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16142.

[57763] MGC16332 (Accession NP_612635.2) is another GAM7957 target gene, herein designated TARGET GENE. MGC16332 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC16332, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16332 BINDING SITE, designated SEQ ID:17692, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57764] Another function of GAM7957 is therefore inhibition of MGC16332 (Accession NP_612635.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16332.

[57765] MGC16384 (Accession NP_444276.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC16384 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC16384, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16384 BINDING SITE, designated SEQ ID:11946, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57766] Another function of GAM7957 is therefore inhibition of MGC16384 (Accession NP_444276.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16384.

[57767] MGC16703 (Accession NP_659479.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC16703 BINDING SITE1 and MGC16703 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC16703, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16703 BINDING SITE1 and MGC16703 BINDING SITE2, designated SEQ ID:18312 and SEQ ID:4657 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also des-

ignated SEQ ID:297.

[57768] Another function of GAM7957 is therefore inhibition of MGC16703 (Accession NP_659479.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16703.

[57769] MGC17791 (Accession NP_689575.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC17791 BINDING SITE1 through MGC17791 BINDING SITE5 are target binding sites found in untranslated regions of mRNA encoded by MGC17791, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17791 BINDING SITE1 through MGC17791 BINDING SITE5, designated SEQ ID:11137, SEQ ID:6756, SEQ ID:10818, SEQ ID:16675 and SEQ ID:646 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57770] Another function of GAM7957 is therefore inhibition of MGC17791 (Accession NP_689575.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC17791.

[57771] MGC17986 (Accession NP_705836.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC17986 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC17986, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17986 BINDING SITE, designated SEQ ID:9086, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57772] Another function of GAM7957 is therefore inhibition of MGC17986 (Accession NP_705836.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC17986.

[57773] MGC20235 (Accession NP_659478.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC20235 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC20235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC20235 BINDING SITE, designated SEQ ID:6648, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57774] Another function of GAM7957 is therefore inhibition of MGC20235 (Accession NP_659478.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC20235.

[57775] MGC20481 (Accession NP_443081.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC20481 BINDING SITE1 and MGC20481 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC20481, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC20481 BINDING SITE1 and MGC20481 BINDING SITE2, designated SEQ ID:19193 and SEQ ID:973 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57776] Another function of GAM7957 is therefore inhibition of MGC20481 (Accession NP_443081.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC20481.

[57777] MGC20741 (Accession NP_061031.2) is another GAM7957 target gene, herein designated TARGET GENE. MGC20741 BINDING SITE1 and MGC20741 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC20741, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC20741 BINDING SITE1 and MGC20741 BINDING SITE2, designated SEQ ID:17399 and SEQ ID:11529 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57778] Another function of GAM7957 is therefore inhibition of MGC20741 (Accession NP_061031.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC20741.

[57779] MGC20781 (Accession NP_443167.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC20781 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC20781, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC20781 BINDING SITE, designated SEQ ID:19781, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57780] Another function of GAM7957 is therefore inhibition of MGC20781 (Accession NP_443167.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC20781.

[57781] MGC23244 (Accession NP_653216.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC23244 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC23244, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC23244 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57782] Another function of GAM7957 is therefore inhibition of MGC23244 (Accession NP_653216.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC23244.

[57783] MGC23885 (Accession NP_689714.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC23885 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC23885, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC23885 BINDING SITE, designated SEQ ID:11744, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57784] Another function of GAM7957 is therefore inhibition of MGC23885 (Accession NP_689714.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC23885.

[57785] MGC2396 (Accession NP_443084.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC2396 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC2396, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2396 BINDING SITE, designated SEQ ID:8496, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57786] Another function of GAM7957 is therefore inhibition of MGC2396 (Accession NP_443084.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2396.

[57787] MGC2562 (Accession NP_115750.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC2562 BINDING SITE1 through MGC2562 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by MGC2562, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2562 BINDING SITE1 through MGC2562 BINDING SITE3, designated SEQ ID:15818, SEQ ID:19241 and SEQ ID:6525 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57788] Another function of GAM7957 is therefore inhibition of

MGC2562 (Accession NP_115750.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2562.

[57789] MGC26877 (Accession NP_653228.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC26877 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC26877, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC26877 BINDING SITE, designated SEQ ID:16438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57790] Another function of GAM7957 is therefore inhibition of MGC26877 (Accession NP_653228.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC26877.

[57791] MGC2731 (Accession NP_076973.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC2731 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC2731, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2731 BINDING SITE, designated SEQ ID:6364, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57792] Another function of GAM7957 is therefore inhibition of MGC2731 (Accession NP_076973.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2731.

[57793] MGC29891 (Accession NP_653219.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC29891 BINDING SITE1 and MGC29891 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC29891, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29891 BINDING SITE1 and MGC29891 BINDING SITE2, designated SEQ ID:18690 and SEQ ID:15224 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57794] Another function of GAM7957 is therefore inhibition of MGC29891 (Accession NP_653219.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29891.

[57795] MGC3169 (Accession NP_076979.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC3169 BINDING SITE1 and MGC3169 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC3169, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3169 BINDING SITE1 and MGC3169 BINDING SITE2, designated SEQ ID:11898 and SEQ ID:6847 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57796] Another function of GAM7957 is therefore inhibition of MGC3169 (Accession NP_076979.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3169.

[57797] MGC3195 (Accession NP_114111.2) is another GAM7957

target gene, herein designated TARGET GENE. MGC3195 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC3195, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3195 BINDING SITE, designated SEQ ID:8791, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57798] Another function of GAM7957 is therefore inhibition of MGC3195 (Accession NP_114111.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3195.

[57799] MGC32020 (Accession NP_689479.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC32020 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC32020, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC32020 BINDING SITE, designated SEQ ID:18690, to the nucleotide sequence of GAM7957 RNA, herein design-

nated GAM RNA, also designated SEQ ID:297.

[57800] Another function of GAM7957 is therefore inhibition of MGC32020 (Accession NP_689479.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC32020.

[57801] MGC3207 (Accession NP_115661.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC3207 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC3207, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3207 BINDING SITE, designated SEQ ID:2485, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57802] Another function of GAM7957 is therefore inhibition of MGC3207 (Accession NP_115661.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3207.

[57803] MGC3329 (Accession NP_076991.2) is another GAM7957 target gene, herein designated TARGET GENE. MGC3329

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC3329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3329 BINDING SITE, designated SEQ ID:17423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57804] Another function of GAM7957 is therefore inhibition of MGC3329 (Accession NP_076991.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3329.

[57805] MGC33488 (Accession NP_612359.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC33488 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC33488, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33488 BINDING SITE, designated SEQ ID:16907, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57806] Another function of GAM7957 is therefore inhibition of MGC33488 (Accession NP_612359.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33488.

[57807] MGC33547 (Accession NP_653262.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC33547 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC33547, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33547 BINDING SITE, designated SEQ ID:20039, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57808] Another function of GAM7957 is therefore inhibition of MGC33547 (Accession NP_653262.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33547.

[57809] MGC33653 (Accession NP_699177.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC33653 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by MGC33653, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33653 BINDING SITE, designated SEQ ID:4802, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57810] Another function of GAM7957 is therefore inhibition of MGC33653 (Accession NP_699177.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33653.

[57811] MGC33971 (Accession NP_699174.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC33971 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC33971, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33971 BINDING SITE, designated SEQ ID:14635, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57812] Another function of GAM7957 is therefore inhibition of

MGC33971 (Accession NP_699174.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33971.

[57813] MGC34034 (Accession NP_694956.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC34034 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC34034, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34034 BINDING SITE, designated SEQ ID:3186, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57814] Another function of GAM7957 is therefore inhibition of MGC34034 (Accession NP_694956.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34034.

[57815] MGC34079 (Accession NP_689688.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC34079 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC34079, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34079 BINDING SITE, designated SEQ ID:743, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57816] Another function of GAM7957 is therefore inhibition of MGC34079 (Accession NP_689688.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34079.

[57817] MGC34725 (Accession NP_775908.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC34725 BINDING SITE1 and MGC34725 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC34725, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34725 BINDING SITE1 and MGC34725 BINDING SITE2, designated SEQ ID:6790 and SEQ ID:18691 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57818] Another function of GAM7957 is therefore inhibition of MGC34725 (Accession NP_775908.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34725.

[57819] MGC35295 (Accession NP_689930.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC35295 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC35295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35295 BINDING SITE, designated SEQ ID:15007, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57820] Another function of GAM7957 is therefore inhibition of MGC35295 (Accession NP_689930.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35295.

[57821] MGC35352 (Accession NP_689773.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC35352 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by MGC35352, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35352 BINDING SITE, designated SEQ ID:6472, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57822] Another function of GAM7957 is therefore inhibition of MGC35352 (Accession NP_689773.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35352.

[57823] MGC35361 (Accession NP_671727.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC35361 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC35361, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35361 BINDING SITE, designated SEQ ID:9208, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57824] Another function of GAM7957 is therefore inhibition of

MGC35361 (Accession NP_671727.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35361.

[57825] MGC35440 (Accession NP_694952.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC35440 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC35440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35440 BINDING SITE, designated SEQ ID:12759, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57826] Another function of GAM7957 is therefore inhibition of MGC35440 (Accession NP_694952.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35440.

[57827] MGC39518 (Accession NP_776183.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC39518 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC39518, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39518 BINDING SITE, designated SEQ ID:8988, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57828] Another function of GAM7957 is therefore inhibition of MGC39518 (Accession NP_776183.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC39518.

[57829] MGC39633 (Accession NP_689762.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC39633 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC39633, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39633 BINDING SITE, designated SEQ ID:5211, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57830] Another function of GAM7957 is therefore inhibition of MGC39633 (Accession NP_689762.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC39633.

[57831] MGC4248 (Accession NP_115709.2) is another GAM7957 target gene, herein designated TARGET GENE. MGC4248 BINDING SITE1 and MGC4248 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC4248, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4248 BINDING SITE1 and MGC4248 BINDING SITE2, designated SEQ ID:5210 and SEQ ID:15981 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57832] Another function of GAM7957 is therefore inhibition of MGC4248 (Accession NP_115709.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4248.

[57833] MGC43033 (Accession NP_689924.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC43033 BINDING SITE is a target binding site found in the 3' un-

translated region of mRNA encoded by MGC43033, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC43033 BINDING SITE, designated SEQ ID:11412, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57834] Another function of GAM7957 is therefore inhibition of MGC43033 (Accession NP_689924.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC43033.

[57835] MGC43537 (Accession NP_848639.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC43537 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC43537, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC43537 BINDING SITE, designated SEQ ID:1686, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57836] Another function of GAM7957 is therefore inhibition of

MGC43537 (Accession NP_848639.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC43537.

[57837] MGC4562 (Accession NP_588616.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC4562 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC4562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4562 BINDING SITE, designated SEQ ID:972, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57838] Another function of GAM7957 is therefore inhibition of MGC4562 (Accession NP_588616.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4562.

[57839] MGC45806 (Accession NP_689517.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC45806 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC45806, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC45806 BINDING SITE, designated SEQ ID:13687, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57840] Another function of GAM7957 is therefore inhibition of MGC45806 (Accession NP_689517.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC45806.

[57841] MGC46336 (Accession XP_290712.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC46336 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC46336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC46336 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57842] Another function of GAM7957 is therefore inhibition of MGC46336 (Accession XP_290712.1) . Accordingly, utili-

ties of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC46336.

[57843] MGC4771 (Accession NP_116057.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC4771 BINDING SITE1 and MGC4771 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC4771, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4771 BINDING SITE1 and MGC4771 BINDING SITE2, designated SEQ ID:13162 and SEQ ID:9499 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57844] Another function of GAM7957 is therefore inhibition of MGC4771 (Accession NP_116057.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4771.

[57845] MGC4840 (Accession NP_113678.2) is another GAM7957 target gene, herein designated TARGET GENE. MGC4840 BINDING SITE1 and MGC4840 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by MGC4840, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4840 BINDING SITE1 and MGC4840 BINDING SITE2, designated SEQ ID:2546 and SEQ ID:9736 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57846] Another function of GAM7957 is therefore inhibition of MGC4840 (Accession NP_113678.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4840.

[57847] MGC50836 (Accession XP_171060.1) is another GAM7957 target gene, herein designated TARGET GENE. MGC50836 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC50836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC50836 BINDING SITE, designated SEQ ID:5072, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57848] Another function of GAM7957 is therefore inhibition of MGC50836 (Accession XP_171060.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50836.

[57849] Matrix metalloproteinase 8 (neutrophil collagenase) (MMP8, Accession NP_002415.1) is another GAM7957 target gene, herein designated TARGET GENE. MMP8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MMP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMP8 BINDING SITE, designated SEQ ID:6716, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57850] Another function of GAM7957 is therefore inhibition of Matrix metalloproteinase 8 (neutrophil collagenase) (MMP8, Accession NP_002415.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMP8.

[57851] Myelin oligodendrocyte glycoprotein (MOG, Accession

NP_002424.1) is another GAM7957 target gene, herein designated TARGET GENE. MOG BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MOG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOG BINDING SITE, designated SEQ ID:17403, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57852] Another function of GAM7957 is therefore inhibition of Myelin oligodendrocyte glycoprotein (MOG, Accession NP_002424.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOG.

[57853] MOST2 (Accession NP_064635.1) is another GAM7957 target gene, herein designated TARGET GENE. MOST2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MOST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOST2 BINDING SITE, designated SEQ ID:18624, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57854] Another function of GAM7957 is therefore inhibition of MOST2 (Accession NP_064635.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOST2.

[57855] Mre11 meiotic recombination 11 homolog a (*s. cerevisiae*) (MRE11A, Accession NP_005582.1) is another GAM7957 target gene, herein designated TARGET GENE. MRE11A BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRE11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRE11A BINDING SITE, designated SEQ ID:5020, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57856] Another function of GAM7957 is therefore inhibition of Mre11 meiotic recombination 11 homolog a (*s. cerevisiae*) (MRE11A, Accession NP_005582.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MRE11A.

[57857] Mre11 meiotic recombination 11 homolog a (*s. cerevisiae*) (MRE11A, Accession NP_005581.2) is another GAM7957 target gene, herein designated TARGET GENE. MRE11A BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRE11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRE11A BINDING SITE, designated SEQ ID:5020, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57858] Another function of GAM7957 is therefore inhibition of Mre11 meiotic recombination 11 homolog a (*s. cerevisiae*) (MRE11A, Accession NP_005581.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRE11A.

[57859] Mitochondrial ribosomal protein 63 (MRP63, Accession NP_076931.1) is another GAM7957 target gene, herein designated TARGET GENE. MRP63 BINDING SITE1 and MRP63 BINDING SITE2 are target binding sites found in

untranslated regions of mRNA encoded by MRP63, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRP63 BINDING SITE1 and MRP63 BINDING SITE2, designated SEQ ID:4181 and SEQ ID:4128 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57860] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein 63 (MRP63, Accession NP_076931.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRP63.

[57861] Mitochondrial ribosomal protein I24 (MRPL24, Accession NP_663781.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL24 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MRPL24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL24 BINDING SITE, designated SEQ ID:16165, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[57862] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I24 (MRPL24, Accession NP_663781.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL24.

[57863] Mitochondrial ribosomal protein I30 (MRPL30, Accession NP_660213.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL30 BINDING SITE1 and MRPL30 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MRPL30, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL30 BINDING SITE1 and MRPL30 BINDING SITE2, designated SEQ ID:2031 and SEQ ID:13065 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57864] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I30 (MRPL30, Accession NP_660213.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with MRPL30.

[57865] Mitochondrial ribosomal protein I4 (MRPL4, Accession NP_666500.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL4 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRPL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL4 BINDING SITE, designated SEQ ID:1750, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57866] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I4 (MRPL4, Accession NP_666500.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL4.

[57867] Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851823.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57868] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851823.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[57869] Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851821.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57870] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I52 (MRPL52, Accession

NP_851821.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[57871] Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851312.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57872] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851312.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[57873] Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_848026.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3' untranslated region of

multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57874] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_848026.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[57875] Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851313.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57876] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851313.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[57877] Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851824.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57878] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851824.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[57879] Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851822.1) is another GAM7957 target gene, herein

designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:6651, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57880] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein I52 (MRPL52, Accession NP_851822.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[57881] Mitochondrial ribosomal protein s10 (MRPS10, Accession NP_060611.2) is another GAM7957 target gene, herein designated TARGET GENE. MRPS10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MRPS10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPS10 BINDING SITE, designated SEQ ID:3585, to the nucleotide sequence

of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57882] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein s10 (MRPS10, Accession NP_060611.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPS10.

[57883] Mitochondrial ribosomal protein s18b (MRPS18B, Accession NP_054765.1) is another GAM7957 target gene, herein designated TARGET GENE. MRPS18B BINDING SITE1 and MRPS18B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MRPS18B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPS18B BINDING SITE1 and MRPS18B BINDING SITE2, designated SEQ ID:13965 and SEQ ID:12993 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57884] Another function of GAM7957 is therefore inhibition of Mitochondrial ribosomal protein s18b (MRPS18B, Accession NP_054765.1) . Accordingly, utilities of GAM7957 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPS18B.

[57885] Membrane-spanning 4-domains, subfamily a, member 2 (fc fragment of ige, high affinity i, receptor for; beta polypeptide) (MS4A2, Accession NP_000130.1) is another GAM7957 target gene, herein designated TARGET GENE. MS4A2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MS4A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MS4A2 BINDING SITE, designated SEQ ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57886] Another function of GAM7957 is therefore inhibition of Membrane-spanning 4-domains, subfamily a, member 2 (fc fragment of ige, high affinity i, receptor for; beta polypeptide) (MS4A2, Accession NP_000130.1), a gene which binds to the fc region of immunoglobulins epsilon. and therefore may be associated with Atopic asthma, atopic dermatitis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Atopic asthma, atopic dermatitis, and of other diseases and clini-

cal conditions associated with MS4A2.

[57887] The function of MS4A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.MSCP (Accession NP_057696.1) is another GAM7957 target gene, herein designated TARGET GENE. MSCP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MSCP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSCP BINDING SITE, designated SEQ ID:5159, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57888] Another function of GAM7957 is therefore inhibition of MSCP (Accession NP_057696.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSCP.

[57889] MSCP (Accession NP_061049.2) is another GAM7957 target gene, herein designated TARGET GENE. MSCP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MSCP,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSCP BINDING SITE, designated SEQ ID:5159, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57890] Another function of GAM7957 is therefore inhibition of MSCP (Accession NP_061049.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSCP.

[57891] Muts homolog 3 (e. coli) (MSH3, Accession NP_002430.1) is another GAM7957 target gene, herein designated TARGET GENE. MSH3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MSH3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSH3 BINDING SITE, designated SEQ ID:6752, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57892] Another function of GAM7957 is therefore inhibition of Muts homolog 3 (e. coli) (MSH3, Accession NP_002430.1), a gene which belongs to the dna mismatch repair muts

family. and therefore may be associated with Hereditary nonpolyposis colorectal cancer. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Hereditary nonpolyposis colorectal cancer, and of other diseases and clinical conditions associated with MSH3.

[57893] The function of MSH3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Muts homolog 5 (e. coli) (MSH5, Accession NP_002432.1) is another GAM7957 target gene, herein designated TARGET GENE. MSH5 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MSH5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSH5 BINDING SITE, designated SEQ ID:12084, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57894] Another function of GAM7957 is therefore inhibition of Muts homolog 5 (e. coli) (MSH5, Accession NP_002432.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with MSH5.

[57895] Myotubularin related protein 9 (MTMR9, Accession NP_056273.2) is another GAM7957 target gene, herein designated TARGET GENE. MTMR9 BINDING SITE1 and MTMR9 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTMR9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTMR9 BINDING SITE1 and MTMR9 BINDING SITE2, designated SEQ ID:19031 and SEQ ID:14781 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57896] Another function of GAM7957 is therefore inhibition of Myotubularin related protein 9 (MTMR9, Accession NP_056273.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTMR9.

[57897] Melatonin receptor 1a (MTNR1A, Accession NP_005949.1) is another GAM7957 target gene, herein designated TARGET GENE. MTNR1A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTNR1A BINDING SITE, designated SEQ ID:4731, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57898] Another function of GAM7957 is therefore inhibition of Melatonin receptor 1a (MTNR1A, Accession NP_005949.1), a gene which likely mediates the reproductive and circadian actions of melatonin. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTNR1A.

[57899] The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1.MU (Accession NP_071368.1) is another GAM7957 target gene, herein designated TARGET GENE. MU BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MU BINDING SITE, designated SEQ ID:17421, to the nu-

cleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57900] Another function of GAM7957 is therefore inhibition of MU (Accession NP_071368.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MU.

[57901] Mucin 13, epithelial transmembrane (MUC13, Accession NP_149038.1) is another GAM7957 target gene, herein designated TARGET GENE. MUC13 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MUC13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MUC13 BINDING SITE, designated SEQ ID:13548, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57902] Another function of GAM7957 is therefore inhibition of Mucin 13, epithelial transmembrane (MUC13, Accession NP_149038.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MUC13.

[57903] Mucin 6, gastric (MUC6, Accession XP_290540.1) is an-

other GAM7957 target gene, herein designated TARGET GENE. MUC6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MUC6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MUC6 BINDING SITE, designated SEQ ID:2101, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57904] Another function of GAM7957 is therefore inhibition of Mucin 6, gastric (MUC6, Accession XP_290540.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MUC6.

[57905] Mucin and cadherin-like (MUCDHL, Accession NP_112555.1) is another GAM7957 target gene, herein designated TARGET GENE. MUCDHL BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MUCDHL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MUCDHL BINDING SITE, designated SEQ ID:3704, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57906] Another function of GAM7957 is therefore inhibition of Mucin and cadherin-like (MUCDHL, Accession NP_112555.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MUCDHL.

[57907] Max interacting protein 1 (MXI1, Accession NP_005953.2) is another GAM7957 target gene, herein designated TARGET GENE. MXI1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by MXI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MXI1 BINDING SITE, designated SEQ ID:17318, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57908] Another function of GAM7957 is therefore inhibition of Max interacting protein 1 (MXI1, Accession NP_005953.2), a gene which acts as a tumor suppressor in vivo, engages the MYC network in a functionally relevant manner and therefore may be associated with Prostate cancer, neurofi-

bro sarcoma. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Prostate cancer, neurofibrosarcoma, and of other diseases and clinical conditions associated with MXI1.

[57909] The function of MXI1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.V-myb myeloblastosis viral oncogene homolog (avian)-like 2 (MYBL2, Accession NP_002457.1) is another GAM7957 target gene, herein designated TARGET GENE. MYBL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYBL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYBL2 BINDING SITE, designated SEQ ID:14569, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57910] Another function of GAM7957 is therefore inhibition of V-myb myeloblastosis viral oncogene homolog (avian)-like 2 (MYBL2, Accession NP_002457.1), a gene which plays an essential role during cell cycle progression. Accordingly,

utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYBL2.

[57911] The function of MYBL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM215.1. Myosin, heavy polypeptide 7b, cardiac muscle, beta (MYH7B, Accession NP_219492.1) is another GAM7957 target gene, herein designated TARGET GENE. MYH7B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYH7B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYH7B BINDING SITE, designated SEQ ID:8697, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57912] Another function of GAM7957 is therefore inhibition of Myosin, heavy polypeptide 7b, cardiac muscle, beta (MYH7B, Accession NP_219492.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYH7B.

[57913] Myosin id (MYO1D, Accession XP_050041.4) is another

GAM7957 target gene, herein designated TARGET GENE. MYO1D BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYO1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO1D BINDING SITE, designated SEQ ID:1521, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57914] Another function of GAM7957 is therefore inhibition of Myosin id (MYO1D, Accession XP_050041.4), a gene which is an unconventional myosin. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYO1D.

[57915] The function of MYO1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM227.1. Myozenin 3 (MYOZ3, Accession NP_588612.1) is another GAM7957 target gene, herein designated TARGET GENE. MYOZ3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MYOZ3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYOZ3 BINDING SITE, designated SEQ ID:8407, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57916] Another function of GAM7957 is therefore inhibition of Myozenin 3 (MYOZ3, Accession NP_588612.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYOZ3.

[57917] N4BP2 (Accession NP_060647.2) is another GAM7957 target gene, herein designated TARGET GENE. N4BP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by N4BP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of N4BP2 BINDING SITE, designated SEQ ID:4033, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57918] Another function of GAM7957 is therefore inhibition of N4BP2 (Accession NP_060647.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with N4BP2.

[57919] N4BP3 (Accession XP_038920.2) is another GAM7957 target gene, herein designated TARGET GENE. N4BP3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by N4BP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of N4BP3 BINDING SITE, designated SEQ ID:10245, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57920] Another function of GAM7957 is therefore inhibition of N4BP3 (Accession XP_038920.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with N4BP3.

[57921] NALP12 (Accession NP_653288.1) is another GAM7957 target gene, herein designated TARGET GENE. NALP12 BINDING SITE1 and NALP12 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by NALP12, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NALP12

BINDING SITE1 and NALP12 BINDING SITE2, designated SEQ ID:9765 and SEQ ID:19050 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57922] Another function of GAM7957 is therefore inhibition of NALP12 (Accession NP_653288.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NALP12.

[57923] NAP4 (Accession XP_294897.2) is another GAM7957 target gene, herein designated TARGET GENE. NAP4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NAP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAP4 BINDING SITE, designated SEQ ID:9627, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57924] Another function of GAM7957 is therefore inhibition of NAP4 (Accession XP_294897.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAP4.

[57925] N-acetyltransferase 5 (ard1 homolog, *s. cerevisiae*) (NAT5, Accession NP_852668.1) is another GAM7957 target gene, herein designated TARGET GENE. NAT5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NAT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAT5 BINDING SITE, designated SEQ ID:19510, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57926] Another function of GAM7957 is therefore inhibition of N-acetyltransferase 5 (ard1 homolog, *s. cerevisiae*) (NAT5, Accession NP_852668.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAT5.

[57927] N-acetyltransferase 5 (ard1 homolog, *s. cerevisiae*) (NAT5, Accession NP_852669.1) is another GAM7957 target gene, herein designated TARGET GENE. NAT5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NAT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of NAT5 BINDING SITE, designated SEQ ID:19510, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57928] Another function of GAM7957 is therefore inhibition of N-acetyltransferase 5 (ard1 homolog, *s. cerevisiae*) (NAT5, Accession NP_852669.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAT5.

[57929] N-acetyltransferase 5 (ard1 homolog, *s. cerevisiae*) (NAT5, Accession NP_057184.1) is another GAM7957 target gene, herein designated TARGET GENE. NAT5 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NAT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAT5 BINDING SITE, designated SEQ ID:19510, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57930] Another function of GAM7957 is therefore inhibition of N-acetyltransferase 5 (ard1 homolog, *s. cerevisiae*) (NAT5, Accession NP_057184.1) . Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAT5.

[57931] NCAG1 (Accession NP_115536.1) is another GAM7957 target gene, herein designated TARGET GENE. NCAG1 BINDING SITE1 and NCAG1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCAG1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCAG1 BINDING SITE1 and NCAG1 BINDING SITE2, designated SEQ ID:20079 and SEQ ID:12727 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57932] Another function of GAM7957 is therefore inhibition of NCAG1 (Accession NP_115536.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCAG1.

[57933] Nadh dehydrogenase (ubiquinone) fe-s protein 2, 49kda (nadh-coenzyme q reductase) (NDUFS2, Accession NP_004541.1) is another GAM7957 target gene, herein designated TARGET GENE. NDUFS2 BINDING SITE is a target binding site found in the 5' untranslated region of

mRNA encoded by NDUFS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDUFS2 BINDING SITE, designated SEQ ID:4978, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57934] Another function of GAM7957 is therefore inhibition of NADH dehydrogenase (ubiquinone) Fe-S protein 2, 49kDa (NADH-coenzyme Q reductase) (NDUFS2, Accession NP_004541.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDUFS2.

[57935] Nuclear factor of activated T-cells, cytoplasmic, calcineurin-dependent 3 (NFATC3, Accession NP_775187.1) is another GAM7957 target gene, herein designated TARGET GENE. NFATC3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NFATC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NFATC3 BINDING SITE, designated SEQ ID:10867, to the nucleotide se-

quence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57936] Another function of GAM7957 is therefore inhibition of Nuclear factor of activated t-cells, cytoplasmic, calcineurin-dependent 3 (NFATC3, Accession NP_775187.1), a gene which plays a role in the inducible expression of cytokine genes in t cells. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFATC3.

[57937] The function of NFATC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Nuclear factor of kappa light polypeptide gene enhancer in b-cells inhibitor-like 2 (NFKBIL2, Accession NP_038460.2) is another GAM7957 target gene, herein designated TARGET GENE. NFKBIL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NFKBIL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NFKBIL2 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA,

also designated SEQ ID:297.

[57938] Another function of GAM7957 is therefore inhibition of Nuclear factor of kappa light polypeptide gene enhancer in b-cells inhibitor-like 2 (NFKBIL2, Accession NP_038460.2), a gene which may have a role in regulating NF- kappa B function in epithelial cells. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFKBIL2.

[57939] The function of NFKBIL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2. Nuclear transcription factor, x-box binding 1 (NFX1, Accession NP_667345.1) is another GAM7957 target gene, herein designated TARGET GENE. NFX1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NFX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NFX1 BINDING SITE, designated SEQ ID:12058, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57940] Another function of GAM7957 is therefore inhibition of Nuclear transcription factor, x-box binding 1 (NFX1, Accession NP_667345.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFX1.

[57941] Nescient helix loop helix 1 (NHLH1, Accession NP_005589.1) is another GAM7957 target gene, herein designated TARGET GENE. NHLH1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NHLH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NHLH1 BINDING SITE, designated SEQ ID:5156, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57942] Another function of GAM7957 is therefore inhibition of Nescient helix loop helix 1 (NHLH1, Accession NP_005589.1), a gene which may have a role in development of the nervous system. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NHLH1.

[57943] The function of NHLH1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1.NMNAT1 (Accession NP_073624.2) is another GAM7957 target gene, herein designated TARGET GENE. NMNAT1 BINDING SITE1 through NMNAT1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by NMNAT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NMNAT1 BINDING SITE1 through NMNAT1 BINDING SITE3, designated SEQ ID:13691, SEQ ID:16965 and SEQ ID:15904 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57944] Another function of GAM7957 is therefore inhibition of NMNAT1 (Accession NP_073624.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NMNAT1.

[57945] N-myristoyltransferase 2 (NMT2, Accession NP_004799.1) is another GAM7957 target gene, herein designated TARGET GENE. NMT2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

NMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NMT2 BINDING SITE, designated SEQ ID:8031, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57946] Another function of GAM7957 is therefore inhibition of N-myristoyltransferase 2 (NMT2, Accession NP_004799.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NMT2.

[57947] Nodal homolog (mouse) (NODAL, Accession NP_060525.2) is another GAM7957 target gene, herein designated TARGET GENE. NODAL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NODAL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NODAL BINDING SITE, designated SEQ ID:12796, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57948] Another function of GAM7957 is therefore inhibition of Nodal homolog (mouse) (NODAL, Accession NP_060525.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NODAL.

[57949] Non-pou domain containing, octamer-binding (NONO, Accession NP_031389.2) is another GAM7957 target gene, herein designated TARGET GENE. NONO BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NONO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NONO BINDING SITE, designated SEQ ID:5857, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57950] Another function of GAM7957 is therefore inhibition of Non-pou domain containing, octamer-binding (NONO, Accession NP_031389.2), a gene which is a nuclear protein which contains RNA recognition motifs. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NONO.

[57951] The function of NONO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Nephronophthisis 1 (juvenile) (NPHP1, Accession NP_000263.1) is another GAM7957 target gene, herein designated TARGET GENE. NPHP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NPHP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPHP1 BINDING SITE, designated SEQ ID:15224, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57952] Another function of GAM7957 is therefore inhibition of Nephronophthisis 1 (juvenile) (NPHP1, Accession NP_000263.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPHP1.

[57953] Nephrosis 1, congenital, finnish type (nephrin) (NPHS1, Accession NP_004637.1) is another GAM7957 target gene, herein designated TARGET GENE. NPHS1 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by NPHS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPHS1 BINDING SITE, designated SEQ ID:14789, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57954] Another function of GAM7957 is therefore inhibition of Nephrosis 1, congenital, finnish type (nephrin) (NPHS1, Accession NP_004637.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPHS1.

[57955] Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) is another GAM7957 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:5234, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57956] Another function of GAM7957 is therefore inhibition of Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[57957] Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) is another GAM7957 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:5234, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57958] Another function of GAM7957 is therefore inhibition of Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[57959] Neuropeptide γ receptor $\gamma 2$ (NPY2R, Accession NP_000901.1) is another GAM7957 target gene, herein

designated TARGET GENE. NPY2R BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NPY2R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPY2R BINDING SITE, designated SEQ ID:11027, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57960] Another function of GAM7957 is therefore inhibition of Neuropeptide y receptor y2 (NPY2R, Accession NP_000901.1), a gene which stimulates intracellular calcium flux and may modulate psychomotor activity, food intake, endocrine secretion and vasoconstriction. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPY2R.

[57961] The function of NPY2R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1.5'-nucleotidase, cytosolic ii (NT5C2, Accession NP_036361.1) is another GAM7957 target gene, herein designated TARGET GENE. NT5C2 BINDING SITE is a

target binding site found in the 3' untranslated region of mRNA encoded by NT5C2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NT5C2 BINDING SITE, designated SEQ ID:19192, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57962] Another function of GAM7957 is therefore inhibition of 5'-nucleotidase, cytosolic ii (NT5C2, Accession NP_036361.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NT5C2.

[57963] NUP43 (Accession NP_078923.2) is another GAM7957 target gene, herein designated TARGET GENE. NUP43 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by NUP43, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP43 BINDING SITE, designated SEQ ID:2851, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57964] Another function of GAM7957 is therefore inhibition of NUP43 (Accession NP_078923.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP43.

[57965] Nucleoporin 62kda (NUP62, Accession NP_036478.2) is another GAM7957 target gene, herein designated TARGET GENE. NUP62 BINDING SITE1 and NUP62 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by NUP62, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP62 BINDING SITE1 and NUP62 BINDING SITE2, designated SEQ ID:12360 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57966] Another function of GAM7957 is therefore inhibition of Nucleoporin 62kda (NUP62, Accession NP_036478.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP62.

[57967] Nucleoporin 62kda (NUP62, Accession NP_714941.1) is another GAM7957 target gene, herein designated TARGET

GENE. NUP62 BINDING SITE1 and NUP62 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by NUP62, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP62 BINDING SITE1 and NUP62 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:12360 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57968] Another function of GAM7957 is therefore inhibition of Nucleoporin 62kda (NUP62, Accession NP_714941.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP62.

[57969] Nucleoporin 62kda (NUP62, Accession NP_714940.1) is another GAM7957 target gene, herein designated TARGET GENE. NUP62 BINDING SITE1 and NUP62 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by NUP62, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

NUP62 BINDING SITE1 and NUP62 BINDING SITE2, designated SEQ ID:1492 and SEQ ID:12360 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57970] Another function of GAM7957 is therefore inhibition of Nucleoporin 62kda (NUP62, Accession NP_714940.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP62.

[57971] Nucleoporin 62kda (NUP62, Accession NP_057637.2) is another GAM7957 target gene, herein designated TARGET GENE. NUP62 BINDING SITE1 and NUP62 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by NUP62, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP62 BINDING SITE1 and NUP62 BINDING SITE2, designated SEQ ID:12360 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57972] Another function of GAM7957 is therefore inhibition of Nucleoporin 62kda (NUP62, Accession NP_057637.2) . Ac-

cordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP62.

[57973] NUPL1 (Accession NP_054808.1) is another GAM7957 target gene, herein designated TARGET GENE. NUPL1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by NUPL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUPL1 BINDING SITE, designated SEQ ID:4937, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57974] Another function of GAM7957 is therefore inhibition of NUPL1 (Accession NP_054808.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUPL1.

[57975] ODAG (Accession NP_066990.2) is another GAM7957 target gene, herein designated TARGET GENE. ODAG BINDING SITE1 and ODAG BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ODAG, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ODAG BINDING SITE1 and ODAG BINDING SITE2, designated SEQ ID:15089 and SEQ ID:6298 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57976] Another function of GAM7957 is therefore inhibition of ODAG (Accession NP_066990.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ODAG.

[57977] 8-oxoguanine dna glycosylase (OGG1, Accession NP_058213.1) is another GAM7957 target gene, herein designated TARGET GENE. OGG1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by OGG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OGG1 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57978] Another function of GAM7957 is therefore inhibition of

8-oxoguanine dna glycosylase (OGG1, Accession NP_058213.1), a gene which is involved in base excision DNA repair and removal of 8- oxyguanine and therefore may be associated with Tumorigenesis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Tumorigenesis, and of other diseases and clinical conditions associated with OGG1.

[57979] The function of OGG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.8-oxoguanine dna glycosylase (OGG1, Accession NP_058212.1) is another GAM7957 target gene, herein designated TARGET GENE. OGG1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by OGG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OGG1 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57980] Another function of GAM7957 is therefore inhibition of 8-oxoguanine dna glycosylase (OGG1, Accession

NP_058212.1), a gene which is involved in base excision DNA repair and removal of 8-oxoguanine and therefore may be associated with Tumorigenesis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Tumorigenesis, and of other diseases and clinical conditions associated with OGG1.

[57981] The function of OGG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.8-oxoguanine dna glycosylase (OGG1, Accession NP_002533.1) is another GAM7957 target gene, herein designated TARGET GENE. OGG1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by OGG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OGG1 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57982] Another function of GAM7957 is therefore inhibition of 8-oxoguanine dna glycosylase (OGG1, Accession NP_002533.1), a gene which is involved in base excision

DNA repair and removal of 8- oxyguanine and therefore may be associated with Tumorigenesis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Tumorigenesis, and of other diseases and clinical conditions associated with OGG1.

[57983] The function of OGG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Optic atrophy 3 (autosomal recessive, with chorea and spastic paraplegia) (OPA3, Accession NP_079412.1) is another GAM7957 target gene, herein designated TARGET GENE. OPA3 BINDING SITE1 and OPA3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by OPA3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPA3 BINDING SITE1 and OPA3 BINDING SITE2, designated SEQ ID:1507 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57984] Another function of GAM7957 is therefore inhibition of Optic atrophy 3 (autosomal recessive, with chorea and

spastic paraplegia) (OPA3, Accession NP_079412.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPA3.

[57985] Origin recognition complex, subunit 6 homolog-like (yeast) (ORC6L, Accession NP_055136.1) is another GAM7957 target gene, herein designated TARGET GENE. ORC6L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ORC6L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ORC6L BINDING SITE, designated SEQ ID:8790, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57986] Another function of GAM7957 is therefore inhibition of Origin recognition complex, subunit 6 homolog-like (yeast) (ORC6L, Accession NP_055136.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ORC6L.

[57987] OS4 (Accession NP_005721.2) is another GAM7957 target gene, herein designated TARGET GENE. OS4 BINDING SITE

is a target binding site found in the 3' untranslated region of mRNA encoded by OS4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OS4 BINDING SITE, designated SEQ ID:18554, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57988] Another function of GAM7957 is therefore inhibition of OS4 (Accession NP_005721.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OS4.

[57989] Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_671725.1) is another GAM7957 target gene, herein designated TARGET GENE. OTX3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OTX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTX3 BINDING SITE, designated SEQ ID:12921, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57990] Another function of GAM7957 is therefore inhibition of Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_671725.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTX3.

[57991] Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_757379.1) is another GAM7957 target gene, herein designated TARGET GENE. OTX3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OTX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTX3 BINDING SITE, designated SEQ ID:12921, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57992] Another function of GAM7957 is therefore inhibition of Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_757379.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTX3.

[57993] Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_002553.2) is another GAM7957

target gene, herein designated TARGET GENE. P2RX7 BINDING SITE1 and P2RX7 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by P2RX7, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX7 BINDING SITE1 and P2RX7 BINDING SITE2, designated SEQ ID:15480 and SEQ ID:11148 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57994] Another function of GAM7957 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_002553.2), a gene which responsible for atp- dependent lysis of macrophages and therefore may be associated with Chronic lymphatic leukemia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Chronic lymphatic leukemia, and of other diseases and clinical conditions associated with P2RX7.

[57995] The function of P2RX7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM72.1.Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_803176.1) is another GAM7957 target gene, herein designated TARGET GENE. P2RX7 BINDING SITE1 and P2RX7 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by P2RX7, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX7 BINDING SITE1 and P2RX7 BINDING SITE2, designated SEQ ID:15480 and SEQ ID:11148 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57996] Another function of GAM7957 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_803176.1), a gene which responsible for atp- dependent lysis of macrophages and therefore may be associated with Chronic lymphatic leukemia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Chronic lymphatic leukemia, and of other diseases and clinical conditions associated with P2RX7.

[57997] The function of P2RX7 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Purinergic receptor p2y, g-protein coupled, 11 (P2RY11, Accession NP_002557.2) is another GAM7957 target gene, herein designated TARGET GENE. P2RY11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by P2RY11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RY11 BINDING SITE, designated SEQ ID:11772, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[57998] Another function of GAM7957 is therefore inhibition of Purinergic receptor p2y, g-protein coupled, 11 (P2RY11, Accession NP_002557.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RY11.

[57999] Poly(a) binding protein, nuclear 1 (PABPN1, Accession NP_004634.1) is another GAM7957 target gene, herein designated TARGET GENE. PABPN1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PABPN1, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PABPN1 BINDING SITE, designated SEQ ID:18682, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58000] Another function of GAM7957 is therefore inhibition of Poly(a) binding protein, nuclear 1 (PABPN1, Accession NP_004634.1), a gene which binds to Poly(A) and therefore is associated with Oculopharyngeal muscular dystrophy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Oculopharyngeal muscular dystrophy, and of other diseases and clinical conditions associated with PABPN1.

[58001] The function of PABPN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1.PAF53 (Accession NP_071935.1) is another GAM7957 target gene, herein designated TARGET GENE. PAF53 BINDING SITE1 and PAF53 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PAF53, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAF53 BINDING SITE1 and PAF53 BINDING SITE2, designated SEQ ID:1595 and SEQ ID:9204 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58002] Another function of GAM7957 is therefore inhibition of PAF53 (Accession NP_071935.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAF53.

[58003] Platelet-activating factor acetylhydrolase 2, 40kda (PAFAH2, Accession NP_000428.2) is another GAM7957 target gene, herein designated TARGET GENE. PAFAH2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PAFAH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAFAH2 BINDING SITE, designated SEQ ID:17420, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58004] Another function of GAM7957 is therefore inhibition of Platelet-activating factor acetylhydrolase 2, 40kda

(PAFAH2, Accession NP_000428.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAFAH2.

[58005] Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1) is another GAM7957 target gene, herein designated TARGET GENE. PAICS BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PAICS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAICS BINDING SITE, designated SEQ ID:16560, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58006] Another function of GAM7957 is therefore inhibition of Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1), a gene which is required for purine biosynthesis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAICS.

[58007] The function of PAICS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1. Protocadherin 11 x-linked (PCDH11X, Accession NP_116749.1) is another GAM7957 target gene, herein designated TARGET GENE. PCDH11X BINDING SITE1 and PCDH11X BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PCDH11X, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11X BINDING SITE1 and PCDH11X BINDING SITE2, designated SEQ ID:4124 and SEQ ID:15343 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58008] Another function of GAM7957 is therefore inhibition of Protocadherin 11 x-linked (PCDH11X, Accession NP_116749.1), a gene which is thought to play a fundamental role in cell-cell recognition essential for the segmental development and function of the central nervous system. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical con-

ditions associated with PCDH11X.

[58009] The function of PCDH11X and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2. Protocadherin 11 y-linked (PCDH11Y, Accession NP_116753.1) is another GAM7957 target gene, herein designated TARGET GENE. PCDH11Y BINDING SITE1 and PCDH11Y BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PCDH11Y, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11Y BINDING SITE1 and PCDH11Y BINDING SITE2, designated SEQ ID:15343 and SEQ ID:15343 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58010] Another function of GAM7957 is therefore inhibition of Protocadherin 11 y-linked (PCDH11Y, Accession NP_116753.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11Y.

[58011] Protocadherin 11 y-linked (PCDH11Y, Accession

NP_116753.1) is another GAM7957 target gene, herein designated TARGET GENE. PCDH11Y BINDING SITE1 and PCDH11Y BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PCDH11Y, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11Y BINDING SITE1 and PCDH11Y BINDING SITE2, designated SEQ ID:13155 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58012] Another function of GAM7957 is therefore inhibition of Protocadherin 11 y-linked (PCDH11Y, Accession NP_116753.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11Y.

[58013] Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1) is another GAM7957 target gene, herein designated TARGET GENE. PCDHA9 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PCDHA9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA9 BINDING SITE, designated SEQ ID:3570, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58014] Another function of GAM7957 is therefore inhibition of Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1), a gene which is a calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA9.

[58015] The function of PCDHA9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Protocadherin beta 9 (PCDHB9, Accession NP_061992.2) is another GAM7957 target gene, herein designated TARGET GENE. PCDHB9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PCDHB9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB9 BINDING SITE, designated SEQ ID:5830, to the nucleotide sequence

of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58016] Another function of GAM7957 is therefore inhibition of Protocadherin beta 9 (PCDHB9, Accession NP_061992.2), a gene which is a potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB9.

[58017] The function of PCDHB9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Programmed cell death 7 (PDCD7, Accession NP_005698.1) is another GAM7957 target gene, herein designated TARGET GENE. PDCD7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PDCD7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDCD7 BINDING SITE, designated SEQ ID:18337, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58018] Another function of GAM7957 is therefore inhibition of

Programmed cell death 7 (PDCD7, Accession NP_005698.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDCD7.

[58019] Phosducin-like (PDCL, Accession NP_005379.2) is another GAM7957 target gene, herein designated TARGET GENE. PDCL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PDCL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDCL BINDING SITE, designated SEQ ID:9532, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58020] Another function of GAM7957 is therefore inhibition of Phosducin-like (PDCL, Accession NP_005379.2), a gene which may regulate G- protein signaling and similar to phosducins. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDCL.

[58021] The function of PDCL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Phosphodiesterase 4a, camp-specific (phosphodiesterase e2 dunce homolog, drosophila) (PDE4A, Accession NP_006193.1) is another GAM7957 target gene, herein designated TARGET GENE. PDE4A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PDE4A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDE4A BINDING SITE, designated SEQ ID:8124, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58022] Another function of GAM7957 is therefore inhibition of Phosphodiesterase 4a, camp-specific (phosphodiesterase e2 dunce homolog, drosophila) (PDE4A, Accession NP_006193.1), a gene which is a CAMP-specific phosphodiesterase. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE4A.

[58023] The function of PDE4A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM197.1.Phosphodiesterase 4c, camp-specific

(phosphodiesterase e1 dunce homolog, drosophila) (PDE4C, Accession NP_000914.1) is another GAM7957 target gene, herein designated TARGET GENE. PDE4C BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PDE4C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDE4C BINDING SITE, designated SEQ ID:1567, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58024] Another function of GAM7957 is therefore inhibition of Phosphodiesterase 4c, camp-specific (phosphodiesterase e1 dunce homolog, drosophila) (PDE4C, Accession NP_000914.1), a gene which is a cAMP-specific phosphodiesterase and may be a protein involved in learning and memory. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE4C.

[58025] The function of PDE4C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1. Phosphodiesterase 7a (PDE7A, Accession

NP_002595.1) is another GAM7957 target gene, herein designated TARGET GENE. PDE7A BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PDE7A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDE7A BINDING SITE, designated SEQ ID:17399, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58026] Another function of GAM7957 is therefore inhibition of Phosphodiesterase 7a (PDE7A, Accession NP_002595.1), a gene which is a CAMP-specific phosphodiesterase 7A and plays a role in signal transduction. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE7A.

[58027] The function of PDE7A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.PECR (Accession NP_060911.2) is another GAM7957 target gene, herein designated TARGET GENE. PECCR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PECCR, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PECCR BINDING SITE, designated SEQ ID:4310, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58028] Another function of GAM7957 is therefore inhibition of PECCR (Accession NP_060911.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PECCR.

[58029] PHAX (Accession NP_115553.1) is another GAM7957 target gene, herein designated TARGET GENE. PHAX BINDING SITE1 and PHAX BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PHAX, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHAX BINDING SITE1 and PHAX BINDING SITE2, designated SEQ ID:15984 and SEQ ID:4459 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58030] Another function of GAM7957 is therefore inhibition of PHAX (Accession NP_115553.1) . Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHAX.

[58031] Phosphorylase kinase, beta (PHKB, Accession NP_000284.1) is another GAM7957 target gene, herein designated TARGET GENE. PHKB BINDING SITE1 and PHKB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PHKB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHKB BINDING SITE1 and PHKB BINDING SITE2, designated SEQ ID:14137 and SEQ ID:12490 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58032] Another function of GAM7957 is therefore inhibition of Phosphorylase kinase, beta (PHKB, Accession NP_000284.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHKB.

[58033] PIGO (Accession NP_690577.1) is another GAM7957 target gene, herein designated TARGET GENE. PIGO BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PIGO,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGO BINDING SITE, designated SEQ ID:5114, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58034] Another function of GAM7957 is therefore inhibition of PIGO (Accession NP_690577.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGO.

[58035] PIGO (Accession NP_116023.2) is another GAM7957 target gene, herein designated TARGET GENE. PIGO BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PIGO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGO BINDING SITE, designated SEQ ID:5114, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58036] Another function of GAM7957 is therefore inhibition of PIGO (Accession NP_116023.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with PIGO.

[58037] Phosphatidylinositol-4-phosphate 5-kinase, type ii, beta (PIP5K2B, Accession NP_619632.1) is another GAM7957 target gene, herein designated TARGET GENE. PIP5K2B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PIP5K2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIP5K2B BINDING SITE, designated SEQ ID:3903, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58038] Another function of GAM7957 is therefore inhibition of Phosphatidylinositol-4-phosphate 5-kinase, type ii, beta (PIP5K2B, Accession NP_619632.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIP5K2B.

[58039] Piwi-like 2 (drosophila) (PIWIL2, Accession NP_060538.2) is another GAM7957 target gene, herein designated TARGET GENE. PIWIL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

PIWIL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIWIL2 BINDING SITE, designated SEQ ID:9765, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58040] Another function of GAM7957 is therefore inhibition of Piwi-like 2 (drosophila) (PIWIL2, Accession NP_060538.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIWIL2.

[58041] Phospholipase a2, group iid (PLA2G2D, Accession NP_036532.1) is another GAM7957 target gene, herein designated TARGET GENE. PLA2G2D BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PLA2G2D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLA2G2D BINDING SITE, designated SEQ ID:15631, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58042] Another function of GAM7957 is therefore inhibition of Phospholipase a2, group iId (PLA2G2D, Accession NP_036532.1), a gene which is involved in phospholipid digestion, remodeling of cell membranes, and host defense, as well as pathophysiologic processes. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLA2G2D.

[58043] The function of PLA2G2D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Pleckstrin homology domain containing, family b (eVectins) member 2 (PLEKHB2, Accession NP_060428.1) is another GAM7957 target gene, herein designated TARGET GENE. PLEKHB2 BINDING SITE1 and PLEKHB2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PLEKHB2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLEKHB2 BINDING SITE1 and PLEKHB2 BINDING SITE2, designated SEQ ID:8068 and SEQ ID:15340 respectively, to the nucleotide sequence of GAM7957 RNA, herein design-

nated GAM RNA, also designated SEQ ID:297.

[58044] Another function of GAM7957 is therefore inhibition of Pleckstrin homology domain containing, family b (evectins) member 2 (PLEKHB2, Accession NP_060428.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLEKHB2.

[58045] Polo-like kinase (drosophila) (PLK, Accession NP_005021.2) is another GAM7957 target gene, herein designated TARGET GENE. PLK BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PLK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLK BINDING SITE, designated SEQ ID:1508, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58046] Another function of GAM7957 is therefore inhibition of Polo-like kinase (drosophila) (PLK, Accession NP_005021.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLK.

[58047] PLPL (Accession NP_064566.1) is another GAM7957 target gene, herein designated TARGET GENE. PLPL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PLPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLPL BINDING SITE, designated SEQ ID:699, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58048] Another function of GAM7957 is therefore inhibition of PLPL (Accession NP_064566.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLPL.

[58049] PNPLA1 (Accession NP_775947.1) is another GAM7957 target gene, herein designated TARGET GENE. PNPLA1 BINDING SITE1 and PNPLA1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PNPLA1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNPLA1 BINDING SITE1 and PNPLA1 BINDING SITE2, designated SEQ ID:1493 and SEQ

ID:18749 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58050] Another function of GAM7957 is therefore inhibition of PNPLA1 (Accession NP_775947.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNPLA1.

[58051] Podocalyxin-like (PODXL, Accession NP_005388.1) is another GAM7957 target gene, herein designated TARGET GENE. PODXL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PODXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PODXL BINDING SITE, designated SEQ ID:19168, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58052] Another function of GAM7957 is therefore inhibition of Podocalyxin-like (PODXL, Accession NP_005388.1), a gene which is an antiadhesin. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PODXL.

[58053] The function of PODXL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.1. Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) is another GAM7957 target gene, herein designated TARGET GENE. POFUT1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by POFUT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POFUT1 BINDING SITE, designated SEQ ID:17423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58054] Another function of GAM7957 is therefore inhibition of Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POFUT1.

[58055] POLA2 (Accession NP_002680.2) is another GAM7957 target gene, herein designated TARGET GENE. POLA2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by POLA2, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLA2 BINDING SITE, designated SEQ ID:3957, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58056] Another function of GAM7957 is therefore inhibition of POLA2 (Accession NP_002680.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLA2.

[58057] Polymerase (dna directed), eta (POLH, Accession NP_006493.1) is another GAM7957 target gene, herein designated TARGET GENE. POLH BINDING SITE1 through POLH BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by POLH, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLH BINDING SITE1 through POLH BINDING SITE3, designated SEQ ID:6653, SEQ ID:8681 and SEQ ID:10896 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58058] Another function of GAM7957 is therefore inhibition of

Polymerase (dna directed), eta (POLH, Accession NP_006493.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLH.

[58059] POLR1B (Accession NP_061887.1) is another GAM7957 target gene, herein designated TARGET GENE. POLR1B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by POLR1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLR1B BINDING SITE, designated SEQ ID:732, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58060] Another function of GAM7957 is therefore inhibition of POLR1B (Accession NP_061887.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLR1B.

[58061] Peroxisome proliferative activated receptor, delta (PPARD, Accession NP_006229.1) is another GAM7957 target gene, herein designated TARGET GENE. PPARD BINDING SITE1 and PPARD BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA

encoded by PPARD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPARD BINDING SITE1 and PPARD BINDING SITE2, designated SEQ ID:8364 and SEQ ID:1622 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

- [58062] Another function of GAM7957 is therefore inhibition of Peroxisome proliferative activated receptor, delta (PPARD, Accession NP_006229.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPARD.
- [58063] Protein phosphatase 1f (pp2c domain containing) (PPM1F, Accession NP_055449.1) is another GAM7957 target gene, herein designated TARGET GENE. PPM1F BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PPM1F, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPM1F BINDING SITE, designated SEQ ID:2607, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[58064] Another function of GAM7957 is therefore inhibition of Protein phosphatase 1f (pp2c domain containing) (PPM1F, Accession NP_055449.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPM1F.

[58065] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) is another GAM7957 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE, designated SEQ ID:8779, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58066] Another function of GAM7957 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

PPP1R12B.

[58067] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) is another GAM7957 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE, designated SEQ ID:8779, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58068] Another function of GAM7957 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[58069] Protein phosphatase 1, regulatory (inhibitor) subunit 3b (PPP1R3B, Accession NP_078883.1) is another GAM7957 target gene, herein designated TARGET GENE. PPP1R3B BINDING SITE1 and PPP1R3B BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by PPP1R3B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R3B BINDING SITE1 and PPP1R3B BINDING SITE2, designated SEQ ID:15984 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58070] Another function of GAM7957 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 3b (PPP1R3B, Accession NP_078883.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R3B.

[58071] Protein phosphatase 2 (formerly 2a), regulatory subunit a (pr 65), beta isoform (PPP2R1B, Accession NP_002707.2) is another GAM7957 target gene, herein designated TARGET GENE. PPP2R1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PPP2R1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of PPP2R1B BINDING SITE, designated SEQ ID:9028, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58072] Another function of GAM7957 is therefore inhibition of Protein phosphatase 2 (formerly 2a), regulatory subunit a (pr 65), beta isoform (PPP2R1B, Accession NP_002707.2), a gene which is necessary for interaction of the catalytic PP2A- C and variable PP2A- B subunits. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R1B.

[58073] The function of PPP2R1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1. Polyglutamine binding protein 1 (PQBP1, Accession NP_005701.1) is another GAM7957 target gene, herein designated TARGET GENE. PQBP1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PQBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PQBP1 BINDING SITE,

designated SEQ ID:15439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58074] Another function of GAM7957 is therefore inhibition of Polyglutamine binding protein 1 (PQBP1, Accession NP_005701.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PQBP1.

[58075] Pr domain containing 14 (PRDM14, Accession NP_078780.1) is another GAM7957 target gene, herein designated TARGET GENE. PRDM14 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRDM14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRDM14 BINDING SITE, designated SEQ ID:13304, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58076] Another function of GAM7957 is therefore inhibition of Pr domain containing 14 (PRDM14, Accession NP_078780.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with PRDM14.

[58077] PRIC285 (Accession NP_208384.1) is another GAM7957 target gene, herein designated TARGET GENE. PRIC285 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRIC285, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRIC285 BINDING SITE, designated SEQ ID:13230, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58078] Another function of GAM7957 is therefore inhibition of PRIC285 (Accession NP_208384.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRIC285.

[58079] Protein kinase, x-linked (PRKX, Accession NP_005035.1) is another GAM7957 target gene, herein designated TARGET GENE. PRKX BINDING SITE1 and PRKX BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRKX, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of PRKX BINDING SITE1 and PRKX BINDING SITE2, designated SEQ ID:5830 and SEQ ID:13758 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58080] Another function of GAM7957 is therefore inhibition of Protein kinase, x-linked (PRKX, Accession NP_005035.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKX.

[58081] Protein kinase, y-linked (PRKY, Accession NP_002751.1) is another GAM7957 target gene, herein designated TARGET GENE. PRKY BINDING SITE1 and PRKY BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRKY, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKY BINDING SITE1 and PRKY BINDING SITE2, designated SEQ ID:5494 and SEQ ID:1053 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58082] Another function of GAM7957 is therefore inhibition of

Protein kinase, γ -linked (PRKY, Accession NP_002751.1), a gene which is a putative protein kinase. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKY.

[58083] The function of PRKY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.PRO0255 (Accession NP_054843.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO0255 BINDING SITE1 and PRO0255 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRO0255, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0255 BINDING SITE1 and PRO0255 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:18286 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58084] Another function of GAM7957 is therefore inhibition of PRO0255 (Accession NP_054843.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with PRO0255.

[58085] PRO0478 (Accession NP_054848.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO0478 BINDING SITE1 through PRO0478 BINDING SITE5 are target binding sites found in untranslated regions of mRNA encoded by PRO0478, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0478 BINDING SITE1 through PRO0478 BINDING SITE5, designated SEQ ID:12922, SEQ ID:12098, SEQ ID:1171, SEQ ID:3871 and SEQ ID:5635 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58086] Another function of GAM7957 is therefore inhibition of PRO0478 (Accession NP_054848.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0478.

[58087] PRO0483 (Accession NP_054849.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO0483 BINDING SITE1 and PRO0483 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by PRO0483, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0483 BINDING SITE1 and PRO0483 BINDING SITE2, designated SEQ ID:8189 and SEQ ID:4309 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58088] Another function of GAM7957 is therefore inhibition of PRO0483 (Accession NP_054849.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0483.

[58089] PRO0618 (Accession NP_054852.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO0618 BINDING SITE1 and PRO0618 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRO0618, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0618 BINDING SITE1 and PRO0618 BINDING SITE2, designated SEQ ID:12796 and SEQ ID:5830 respectively, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58090] Another function of GAM7957 is therefore inhibition of PRO0618 (Accession NP_054852.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0618.

[58091] PRO1048 (Accession NP_060967.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO1048 BINDING SITE1 through PRO1048 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRO1048, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO1048 BINDING SITE1 through PRO1048 BINDING SITE3, designated SEQ ID:11467, SEQ ID:7048 and SEQ ID:12433 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58092] Another function of GAM7957 is therefore inhibition of PRO1048 (Accession NP_060967.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

PRO1048.

[58093] PRO1496 (Accession NP_061073.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO1496 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRO1496, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO1496 BINDING SITE, designated SEQ ID:4729, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58094] Another function of GAM7957 is therefore inhibition of PRO1496 (Accession NP_061073.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1496.

[58095] PRO2015 (Accession NP_060982.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO2015 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRO2015, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

PRO2015 BINDING SITE, designated SEQ ID:18687, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58096] Another function of GAM7957 is therefore inhibition of PRO2015 (Accession NP_060982.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2015.

[58097] PRO2198 (Accession NP_061091.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO2198 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PRO2198, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2198 BINDING SITE, designated SEQ ID:8909, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58098] Another function of GAM7957 is therefore inhibition of PRO2198 (Accession NP_061091.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2198.

[58099] PRO2730 (Accession NP_079498.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO2730 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRO2730, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2730 BINDING SITE, designated SEQ ID:17419, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58100] Another function of GAM7957 is therefore inhibition of PRO2730 (Accession NP_079498.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2730.

[58101] PRO2964 (Accession NP_061017.1) is another GAM7957 target gene, herein designated TARGET GENE. PRO2964 BINDING SITE1 and PRO2964 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRO2964, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2964 BINDING SITE1 and

PRO2964 BINDING SITE2, designated SEQ ID:15343 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58102] Another function of GAM7957 is therefore inhibition of PRO2964 (Accession NP_061017.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2964.

[58103] Prp4 pre-mrna processing factor 4 homolog (yeast) (PRPF4, Accession NP_004688.2) is another GAM7957 target gene, herein designated TARGET GENE. PRPF4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRPF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRPF4 BINDING SITE, designated SEQ ID:3935, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58104] Another function of GAM7957 is therefore inhibition of Prp4 pre-mrna processing factor 4 homolog (yeast) (PRPF4, Accession NP_004688.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRPF4.

[58105] Periaxin (PRX, Accession NP_066007.1) is another GAM7957 target gene, herein designated TARGET GENE. PRX BINDING SITE1 and PRX BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRX, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRX BINDING SITE1 and PRX BINDING SITE2, designated SEQ ID:14564 and SEQ ID:6121 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58106] Another function of GAM7957 is therefore inhibition of Periaxin (PRX, Accession NP_066007.1), a gene which seems to be required for maintenance of peripheral nerve myelin sheath. may have a role in axon- glial interactions, possibly by interacting with the cytoplasmic domains of integral membrane proteins such as myelin- associated glycoprotein in the periaxonal regions of the schwann cell

plasma membrane. may have a role in the early phases of myelin deposition and therefore is associated with Dejerine–sottas neuropathy, autosomal recessive. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Dejerine–sottas neuropathy, autosomal recessive, and of other diseases and clinical conditions associated with PRX.

[58107] The function of PRX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Pleckstrin homology, sec7 and coiled/coil domains 3 (PSCD3, Accession NP_004218.1) is another GAM7957 target gene, herein designated TARGET GENE. PSCD3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PSCD3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSCD3 BINDING SITE, designated SEQ ID:1543, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58108] Another function of GAM7957 is therefore inhibition of Pleckstrin homology, sec7 and coiled/coil domains 3

(PSCD3, Accession NP_004218.1), a gene which regulates vesicle trafficking in eukaryotic cells. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSCD3.

[58109] The function of PSCD3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM650.2.PSK (Accession NP_057235.1) is another GAM7957 target gene, herein designated TARGET GENE. PSK BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSK BINDING SITE, designated SEQ ID:2797, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58110] Another function of GAM7957 is therefore inhibition of PSK (Accession NP_057235.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSK.

[58111] Proteasome (prosome, macropain) 26s subunit, non-atpase, 5 (PSMD5, Accession NP_005038.1) is another

GAM7957 target gene, herein designated TARGET GENE. PSMD5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PSMD5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSMD5 BINDING SITE, designated SEQ ID:2976, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58112] Another function of GAM7957 is therefore inhibition of Proteasome (prosome, macropain) 26s subunit, non-atpase, 5 (PSMD5, Accession NP_005038.1), a gene which is the non-ATPase subunit 5 of the 26S proteasome (prosome macropain). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSMD5.

[58113] The function of PSMD5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1. Platelet-activating factor receptor (PTAFR, Accession NP_000943.1) is another GAM7957 target gene, herein designated TARGET GENE. PTAFR BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by PTAFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTAFR BINDING SITE, designated SEQ ID:18066, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58114] Another function of GAM7957 is therefore inhibition of Platelet-activating factor receptor (PTAFR, Accession NP_000943.1), a gene which is a platelet- activating factor receptor. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTAFR.

[58115] The function of PTAFR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1. Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1) is another GAM7957 target gene, herein designated TARGET GENE. PTGIS BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTGIS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of PTGIS BINDING SITE, designated SEQ ID:7315, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

- [58116] Another function of GAM7957 is therefore inhibition of Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1), a gene which catalyzes the isomerization of prostaglandin h2 to prostacyclin (= prostaglandin i2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGIS.
- [58117] The function of PTGIS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1. Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_542158.1) is another GAM7957 target gene, herein designated TARGET GENE. PTGS1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PTGS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

PTGS1 BINDING SITE, designated SEQ ID:12185, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58118] Another function of GAM7957 is therefore inhibition of Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_542158.1), a gene which may play an important role in regulating or promoting cell proliferation in some normal and neoplastically transformed cells. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGS1.

[58119] The function of PTGS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1. Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_000953.2) is another GAM7957 target gene, herein designated TARGET GENE. PTGS1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PTGS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

PTGS1 BINDING SITE, designated SEQ ID:12185, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58120] Another function of GAM7957 is therefore inhibition of Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_000953.2), a gene which may play an important role in regulating or promoting cell proliferation in some normal and neoplastically transformed cells. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGS1.

[58121] The function of PTGS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1. Ptk6 protein tyrosine kinase 6 (PTK6, Accession NP_005966.1) is another GAM7957 target gene, herein designated TARGET GENE. PTK6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTK6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTK6 BINDING SITE, designated SEQ ID:15675, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58122] Another function of GAM7957 is therefore inhibition of Ptk6 protein tyrosine kinase 6 (PTK6, Accession NP_005966.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTK6.

[58123] Polymerase i and transcript release factor (PTRF, Accession NP_036364.1) is another GAM7957 target gene, herein designated TARGET GENE. PTRF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTRF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTRF BINDING SITE, designated SEQ ID:11379, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58124] Another function of GAM7957 is therefore inhibition of Polymerase i and transcript release factor (PTRF, Accession NP_036364.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTRF.

[58125] QRSL1 (Accession NP_060762.2) is another GAM7957 target gene, herein designated TARGET GENE. QRSL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by QRSL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of QRSL1 BINDING SITE, designated SEQ ID:17699, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58126] Another function of GAM7957 is therefore inhibition of QRSL1 (Accession NP_060762.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with QRSL1.

[58127] Rab3d, member ras oncogene family (RAB3D, Accession NP_004274.1) is another GAM7957 target gene, herein designated TARGET GENE. RAB3D BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAB3D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB3D BINDING SITE, designated SEQ ID:19319, to the nucleotide sequence of GAM7957

RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58128] Another function of GAM7957 is therefore inhibition of Rab3d, member ras oncogene family (RAB3D, Accession NP_004274.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB3D.

[58129] Rab4b, member ras oncogene family (RAB4B, Accession NP_057238.2) is another GAM7957 target gene, herein designated TARGET GENE. RAB4B BINDING SITE1 and RAB4B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RAB4B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB4B BINDING SITE1 and RAB4B BINDING SITE2, designated SEQ ID:15221 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58130] Another function of GAM7957 is therefore inhibition of Rab4b, member ras oncogene family (RAB4B, Accession NP_057238.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical

cal conditions associated with RAB4B.

[58131] Rab5b, member ras oncogene family (RAB5B, Accession NP_002859.1) is another GAM7957 target gene, herein designated TARGET GENE. RAB5B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RAB5B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB5B BINDING SITE, designated SEQ ID:14174, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58132] Another function of GAM7957 is therefore inhibition of Rab5b, member ras oncogene family (RAB5B, Accession NP_002859.1), a gene which is presumably involved in vesicular trafficking at the plasma membrane. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB5B.

[58133] The function of RAB5B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM408.1.Rab7, member ras oncogene family-like 1

(RAB7L1, Accession NP_003920.1) is another GAM7957 target gene, herein designated TARGET GENE. RAB7L1 BINDING SITE1 and RAB7L1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RAB7L1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB7L1 BINDING SITE1 and RAB7L1 BINDING SITE2, designated SEQ ID:2925 and SEQ ID:16970 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58134] Another function of GAM7957 is therefore inhibition of Rab7, member ras oncogene family-like 1 (RAB7L1, Accession NP_003920.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB7L1.

[58135] Rab9b, member ras oncogene family (RAB9B, Accession NP_057454.1) is another GAM7957 target gene, herein designated TARGET GENE. RAB9B BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RAB9B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB9B BINDING SITE, designated SEQ ID:20013, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58136] Another function of GAM7957 is therefore inhibition of Rab9b, member ras oncogene family (RAB9B, Accession NP_057454.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB9B.

[58137] Rad1 homolog (s. pombe) (RAD1, Accession NP_002844.1) is another GAM7957 target gene, herein designated TARGET GENE. RAD1 BINDING SITE1 and RAD1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RAD1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD1 BINDING SITE1 and RAD1 BINDING SITE2, designated SEQ ID:19050 and SEQ ID:19050 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58138] Another function of GAM7957 is therefore inhibition of

Rad1 homolog (s. pombe) (RAD1, Accession NP_002844.1), a gene which has important roles in DNA damage- activated mitotic and meiotic cell cycle check-points. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD1.

[58139] The function of RAD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM39.1. Rad1 homolog (s. pombe) (RAD1, Accession NP_596868.1) is another GAM7957 target gene, herein designated TARGET GENE. RAD1 BINDING SITE1 and RAD1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RAD1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD1 BINDING SITE1 and RAD1 BINDING SITE2, designated SEQ ID:20138 and SEQ ID:19050 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58140] Another function of GAM7957 is therefore inhibition of

Rad1 homolog (s. pombe) (RAD1, Accession NP_596868.1), a gene which has important roles in DNA damage- activated mitotic and meiotic cell cycle check-points. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD1.

[58141] The function of RAD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM39.1. Rad1 homolog (s. pombe) (RAD1, Accession NP_579816.1) is another GAM7957 target gene, herein designated TARGET GENE. RAD1 BINDING SITE1 and RAD1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RAD1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD1 BINDING SITE1 and RAD1 BINDING SITE2, designated SEQ ID:20138 and SEQ ID:20138 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58142] Another function of GAM7957 is therefore inhibition of

Rad1 homolog (*s. pombe*) (RAD1, Accession NP_579816.1), a gene which has important roles in DNA damage- activated mitotic and meiotic cell cycle check-points. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD1.

[58143] The function of RAD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM39.1. Rad51 homolog (*reca* homolog, *e. coli*) (*s. cerevisiae*) (RAD51, Accession NP_002866.2) is another GAM7957 target gene, herein designated TARGET GENE. RAD51 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RAD51, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD51 BINDING SITE, designated SEQ ID:3609, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58144] Another function of GAM7957 is therefore inhibition of Rad51 homolog (*reca* homolog, *e. coli*) (*s. cerevisiae*)

(RAD51, Accession NP_002866.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD51.

[58145] Rad51 homolog (reca homolog, e. coli) (s. cerevisiae) (RAD51, Accession NP_597994.1) is another GAM7957 target gene, herein designated TARGET GENE. RAD51 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RAD51, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD51 BINDING SITE, designated SEQ ID:3609, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58146] Another function of GAM7957 is therefore inhibition of Rad51 homolog (reca homolog, e. coli) (s. cerevisiae) (RAD51, Accession NP_597994.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD51.

[58147] Retinoblastoma binding protein 5 (RBBP5, Accession NP_005048.1) is another GAM7957 target gene, herein designated TARGET GENE. RBBP5 BINDING SITE is a target

binding site found in the 3' untranslated region of mRNA encoded by RBBP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBBP5 BINDING SITE, designated SEQ ID:6786, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58148] Another function of GAM7957 is therefore inhibition of Retinoblastoma binding protein 5 (RBBP5, Accession NP_005048.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBBP5.

[58149] Retinoblastoma-like 1 (p107) (RBL1, Accession NP_002886.1) is another GAM7957 target gene, herein designated TARGET GENE. RBL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RBL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBL1 BINDING SITE, designated SEQ ID:19648, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ

ID:297.

[58150] Another function of GAM7957 is therefore inhibition of Retinoblastoma-like 1 (p107) (RBL1, Accession NP_002886.1), a gene which has an important role in negatively regulating the rate of progression of the cell cycle. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBL1.

[58151] The function of RBL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Rna binding motif protein 10 (RBM10, Accession NP_690595.1) is another GAM7957 target gene, herein designated TARGET GENE. RBM10 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by RBM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBM10 BINDING SITE, designated SEQ ID:14218, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58152] Another function of GAM7957 is therefore inhibition of

Rna binding motif protein 10 (RBM10, Accession NP_690595.1), a gene which has RNA- binding activity. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBM10.

[58153] The function of RBM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Rna binding motif protein 10 (RBM10, Accession NP_005667.2) is another GAM7957 target gene, herein designated TARGET GENE. RBM10 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by RBM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBM10 BINDING SITE, designated SEQ ID:14218, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58154] Another function of GAM7957 is therefore inhibition of Rna binding motif protein 10 (RBM10, Accession NP_005667.2), a gene which has RNA- binding activity. Accordingly, utilities of GAM7957 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with RBM10.

[58155] The function of RBM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1. Rna binding motif protein 3 (RBM3, Accession NP_006734.1) is another GAM7957 target gene, herein designated TARGET GENE. RBM3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RBM3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBM3 BINDING SITE, designated SEQ ID:14780, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58156] Another function of GAM7957 is therefore inhibition of Rna binding motif protein 3 (RBM3, Accession NP_006734.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBM3.

[58157] Reticulocalbin 1, ef-hand calcium binding domain (RCN1, Accession NP_002892.1) is another GAM7957 target gene,

herein designated TARGET GENE. RCN1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RCN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RCN1 BINDING SITE, designated SEQ ID:904, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58158] Another function of GAM7957 is therefore inhibition of Reticulocalbin 1, ef-hand calcium binding domain (RCN1, Accession NP_002892.1), a gene which may regulate calcium-dependent activities in the ER lumen or post-ER compartment. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RCN1.

[58159] The function of RCN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM767.1.RDC1 (Accession XP_051522.2) is another GAM7957 target gene, herein designated TARGET GENE. RDC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA en-

coded by RDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDC1 BINDING SITE, designated SEQ ID:15888, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58160] Another function of GAM7957 is therefore inhibition of RDC1 (Accession XP_051522.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDC1.

[58161] RDC1 (Accession NP_064707.1) is another GAM7957 target gene, herein designated TARGET GENE. RDC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDC1 BINDING SITE, designated SEQ ID:15888, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58162] Another function of GAM7957 is therefore inhibition of RDC1 (Accession NP_064707.1) . Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDC1.

[58163] Arginine–glutamic acid dipeptide (re) repeats (RERE, Accession NP_036234.2) is another GAM7957 target gene, herein designated TARGET GENE. RERE BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RERE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RERE BINDING SITE, designated SEQ ID:9174, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58164] Another function of GAM7957 is therefore inhibition of Arginine–glutamic acid dipeptide (re) repeats (RERE, Accession NP_036234.2), a gene which binds DRPLA and locates in the nucleus and therefore may be associated with Dentatorubral– pallidoluysian atrophy. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Dentatorubral– pallidoluysian atrophy, and of other diseases and clinical conditions associated with RERE.

[58165] The function of RERE and its association with various dis–

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Ret proto-oncogene (multiple endocrine neoplasia and medullary thyroid carcinoma 1, hirschsprung disease) (RET, Accession NP_065681.1) is another GAM7957 target gene, herein designated TARGET GENE. RET BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by RET, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RET BINDING SITE, designated SEQ ID:17434, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58166] Another function of GAM7957 is therefore inhibition of Ret proto-oncogene (multiple endocrine neoplasia and medullary thyroid carcinoma 1, hirschsprung disease) (RET, Accession NP_065681.1), a gene which transduces signals for cell growth and differentiation. and therefore may be associated with Multiple endocrine neoplasia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Multiple endocrine neoplasia, and of other diseases and clinical conditions associated with RET.

[58167] The function of RET and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Rev3-like, catalytic subunit of dna polymerase zeta (yeast) (REV3L, Accession NP_002903.1) is another GAM7957 target gene, herein designated TARGET GENE. REV3L BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by REV3L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of REV3L BINDING SITE, designated SEQ ID:6680, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58168] Another function of GAM7957 is therefore inhibition of Rev3-like, catalytic subunit of dna polymerase zeta (yeast) (REV3L, Accession NP_002903.1), a gene which is a catalytic subunit of DNA polymerase zeta and acts in translation replication and mutagenesis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with REV3L.

[58169] The function of REV3L and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM275.1. Replication factor c (activator 1) 2, 40kda (RFC2, Accession NP_852136.1) is another GAM7957 target gene, herein designated TARGET GENE. RFC2 BINDING SITE1 and RFC2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RFC2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RFC2 BINDING SITE1 and RFC2 BINDING SITE2, designated SEQ ID:9763 and SEQ ID:9763 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58170] Another function of GAM7957 is therefore inhibition of Replication factor c (activator 1) 2, 40kda (RFC2, Accession NP_852136.1), a gene which is needed for the elongation of primed dna templates by dna polymerase and therefore may be associated with Williams– beuren syndrome. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Williams– beuren syndrome, and of other diseases and clinical conditions associated with RFC2.

[58171] The function of RFC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1. Replication factor c (activator 1) 2, 40kda (RFC2, Accession NP_002905.2) is another GAM7957 target gene, herein designated TARGET GENE. RFC2 BINDING SITE1 and RFC2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RFC2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RFC2 BINDING SITE1 and RFC2 BINDING SITE2, designated SEQ ID:9778 and SEQ ID:9778 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58172] Another function of GAM7957 is therefore inhibition of Replication factor c (activator 1) 2, 40kda (RFC2, Accession NP_002905.2), a gene which is needed for the elongation of primed dna templates by dna polymerase and therefore may be associated with Williams- beuren syndrome. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Williams- beuren syn-

drome, and of other diseases and clinical conditions associated with RFC2.

[58173] The function of RFC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.RGSL2 (Accession NP_115643.1) is another GAM7957 target gene, herein designated TARGET GENE. RGSL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RGSL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGSL2 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58174] Another function of GAM7957 is therefore inhibition of RGSL2 (Accession NP_115643.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGSL2.

[58175] RHO6 (Accession NP_055285.1) is another GAM7957 target gene, herein designated TARGET GENE. RHO6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RHO6, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHO6 BINDING SITE, designated SEQ ID:1080, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58176] Another function of GAM7957 is therefore inhibition of RHO6 (Accession NP_055285.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHO6.

[58177] Rho-related btb domain containing 3 (RHOBTB3, Accession NP_055714.1) is another GAM7957 target gene, herein designated TARGET GENE. RHOBTB3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RHOBTB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHOBTB3 BINDING SITE, designated SEQ ID:18151, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58178] Another function of GAM7957 is therefore inhibition of Rho-related btb domain containing 3 (RHOBTB3, Acces-

sion NP_055714.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHOBTB3.

[58179] Regulating synaptic membrane exocytosis 1 (RIMS1, Accession NP_055804.1) is another GAM7957 target gene, herein designated TARGET GENE. RIMS1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RIMS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RIMS1 BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58180] Another function of GAM7957 is therefore inhibition of Regulating synaptic membrane exocytosis 1 (RIMS1, Accession NP_055804.1), a gene which may have a regulatory role in the membrane interactions during trafficking of synaptic vesicles. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RIMS1.

[58181] The function of RIMS1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM264.1.RNF125 (Accession NP_060301.1) is another GAM7957 target gene, herein designated TARGET GENE. RNF125 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNF125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF125 BINDING SITE, designated SEQ ID:11101, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58182] Another function of GAM7957 is therefore inhibition of RNF125 (Accession NP_060301.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF125.

[58183] Rho-associated, coiled-coil containing protein kinase 2 (ROCK2, Accession NP_004841.1) is another GAM7957 target gene, herein designated TARGET GENE. ROCK2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ROCK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of ROCK2 BINDING SITE, designated SEQ ID:9205, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58184] Another function of GAM7957 is therefore inhibition of Rho-associated, coiled-coil containing protein kinase 2 (ROCK2, Accession NP_004841.1), a gene which regulates cytokinesis, smooth muscle contraction, the formation of actin stress fibers and focal adhesions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ROCK2.

[58185] The function of ROCK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM90.1.RoXaN (Accession NP_060060.3) is another GAM7957 target gene, herein designated TARGET GENE. RoXaN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RoXaN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RoXaN BINDING SITE, designated SEQ ID:9947, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58186] Another function of GAM7957 is therefore inhibition of RoXaN (Accession NP_060060.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RoXaN.

[58187] Ribophorin i (RPN1, Accession NP_002941.1) is another GAM7957 target gene, herein designated TARGET GENE. RPN1 BINDING SITE1 and RPN1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RPN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RPN1 BINDING SITE1 and RPN1 BINDING SITE2, designated SEQ ID:15089 and SEQ ID:9619 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58188] Another function of GAM7957 is therefore inhibition of Ribophorin i (RPN1, Accession NP_002941.1), a gene which is a subunit of oligosaccharyltransferase that binds ribosomes. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical

conditions associated with RPN1.

[58189] The function of RPN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM221.1. Ribosomal protein s6 kinase, 52kda, polypeptide 1 (RPS6KC1, Accession NP_036556.2) is another GAM7957 target gene, herein designated TARGET GENE. RPS6KC1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RPS6KC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RPS6KC1 BINDING SITE, designated SEQ ID:2652, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58190] Another function of GAM7957 is therefore inhibition of Ribosomal protein s6 kinase, 52kda, polypeptide 1 (RPS6KC1, Accession NP_036556.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RPS6KC1.

[58191] RRP4 (Accession NP_055100.2) is another GAM7957 tar-

get gene, herein designated TARGET GENE. RRP4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RRP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RRP4 BINDING SITE, designated SEQ ID:9420, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58192] Another function of GAM7957 is therefore inhibition of RRP4 (Accession NP_055100.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RRP4.

[58193] SBP1 (Accession NP_835222.1) is another GAM7957 target gene, herein designated TARGET GENE. SBP1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SBP1 BINDING SITE, designated SEQ ID:15055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58194] Another function of GAM7957 is therefore inhibition of SBP1 (Accession NP_835222.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SBP1.

[58195] SC65 (Accession NP_006446.1) is another GAM7957 target gene, herein designated TARGET GENE. SC65 BINDING SITE1 and SC65 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SC65, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SC65 BINDING SITE1 and SC65 BINDING SITE2, designated SEQ ID:10571 and SEQ ID:15304 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58196] Another function of GAM7957 is therefore inhibition of SC65 (Accession NP_006446.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SC65.

[58197] Scan domain containing 2 (SCAND2, Accession NP_378666.1) is another GAM7957 target gene, herein designated TARGET GENE. SCAND2 BINDING SITE is a target binding site found in the 3' untranslated region of

multiple transcripts of mRNA encoded by SCAND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAND2 BINDING SITE, designated SEQ ID:12555, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58198] Another function of GAM7957 is therefore inhibition of Scan domain containing 2 (SCAND2, Accession NP_378666.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAND2.

[58199] Src family associated phosphoprotein 2 (SCAP2, Accession NP_003921.2) is another GAM7957 target gene, herein designated TARGET GENE. SCAP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SCAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAP2 BINDING SITE, designated SEQ ID:16383, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58200] Another function of GAM7957 is therefore inhibition of Src family associated phosphoprotein 2 (SCAP2, Accession NP_003921.2), a gene which interacts with Src family protein tyrosine kinases and SLAP/FYB (SLA). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAP2.

[58201] The function of SCAP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.SCIN (Accession NP_149119.1) is another GAM7957 target gene, herein designated TARGET GENE. SCIN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SCIN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCIN BINDING SITE, designated SEQ ID:17536, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58202] Another function of GAM7957 is therefore inhibition of SCIN (Accession NP_149119.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with SCIN.

[58203] Sodium channel, voltage-gated, type xi, alpha polypeptide (SCN11A, Accession NP_054858.1) is another GAM7957 target gene, herein designated TARGET GENE. SCN11A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SCN11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN11A BINDING SITE, designated SEQ ID:15992, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58204] Another function of GAM7957 is therefore inhibition of Sodium channel, voltage-gated, type xi, alpha polypeptide (SCN11A, Accession NP_054858.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN11A.

[58205] Sodium channel, voltage-gated, type ii, beta polypeptide (SCN2B, Accession NP_004579.1) is another GAM7957 target gene, herein designated TARGET GENE. SCN2B BINDING SITE1 and SCN2B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded

by SCN2B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN2B BINDING SITE1 and SCN2B BINDING SITE2, designated SEQ ID:3358 and SEQ ID:1782 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58206] Another function of GAM7957 is therefore inhibition of Sodium channel, voltage-gated, type ii, beta polypeptide (SCN2B, Accession NP_004579.1), a gene which modulates channel properties. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN2B.

[58207] The function of SCN2B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.SCR59 (Accession NP_075559.1) is another GAM7957 target gene, herein designated TARGET GENE. SCR59 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SCR59, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

illustrates the complementarity of the nucleotide sequences of SCR59 BINDING SITE, designated SEQ ID:3264, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58208] Another function of GAM7957 is therefore inhibition of SCR59 (Accession NP_075559.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCR59.

[58209] Sec24 related gene family, member c (*s. cerevisiae*) (SEC24C, Accession NP_004913.1) is another GAM7957 target gene, herein designated TARGET GENE. SEC24C BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SEC24C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC24C BINDING SITE, designated SEQ ID:7132, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58210] Another function of GAM7957 is therefore inhibition of Sec24 related gene family, member c (*s. cerevisiae*) (SEC24C, Accession NP_004913.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with SEC24C.

[58211] SEC61A1 (Accession NP_037468.1) is another GAM7957 target gene, herein designated TARGET GENE. SEC61A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SEC61A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC61A1 BINDING SITE, designated SEQ ID:7817, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58212] Another function of GAM7957 is therefore inhibition of SEC61A1 (Accession NP_037468.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC61A1.

[58213] Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3e (SEMA3E, Accession NP_036563.1) is another GAM7957 target gene, herein designated TARGET GENE. SEMA3E BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SEMA3E, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEMA3E BINDING SITE, designated SEQ ID:8019, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58214] Another function of GAM7957 is therefore inhibition of Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3e (SEMA3E, Accession NP_036563.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA3E.

[58215] Sema domain, seven thrombospondin repeats (type 1 and type 1-like), transmembrane domain (tm) and short cytoplasmic domain, (semaphorin) 5a (SEMA5A, Accession NP_003957.1) is another GAM7957 target gene, herein designated TARGET GENE. SEMA5A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SEMA5A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEMA5A BINDING SITE, designated SEQ ID:5826, to the nucleotide se-

quence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58216] Another function of GAM7957 is therefore inhibition of Sema domain, seven thrombospondin repeats (type 1 and type 1-like), transmembrane domain (tm) and short cytoplasmic domain, (semaphorin) 5a (SEMA5A, Accession NP_003957.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA5A.

[58217] Septin 1 (SEPT1, Accession NP_443070.1) is another GAM7957 target gene, herein designated TARGET GENE. SEPT1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SEPT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEPT1 BINDING SITE, designated SEQ ID:19489, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58218] Another function of GAM7957 is therefore inhibition of Septin 1 (SEPT1, Accession NP_443070.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with SEPT1.

[58219] Serum/glucocorticoid regulated kinase-like (SGKL, Accession NP_733827.2) is another GAM7957 target gene, herein designated TARGET GENE. SGKL BINDING SITE1 and SGKL BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SGKL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SGKL BINDING SITE1 and SGKL BINDING SITE2, designated SEQ ID:15249 and SEQ ID:9421 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58220] Another function of GAM7957 is therefore inhibition of Serum/glucocorticoid regulated kinase-like (SGKL, Accession NP_733827.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SGKL.

[58221] Serum/glucocorticoid regulated kinase-like (SGKL, Accession NP_733827.2) is another GAM7957 target gene, herein designated TARGET GENE. SGKL BINDING SITE1 and SGKL BINDING SITE2 are target binding sites found in un-

translated regions of multiple transcripts of mRNA encoded by SGK1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SGK1 BINDING SITE1 and SGK1 BINDING SITE2, designated SEQ ID:9421 and SEQ ID:15249 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58222] Another function of GAM7957 is therefore inhibition of Serum/glucocorticoid regulated kinase-like (SGKL, Accession NP_733827.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SGK1.

[58223] SH3YL1 (Accession NP_056492.1) is another GAM7957 target gene, herein designated TARGET GENE. SH3YL1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SH3YL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3YL1 BINDING SITE, designated SEQ ID:1043, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[58224] Another function of GAM7957 is therefore inhibition of SH3YL1 (Accession NP_056492.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3YL1.

[58225] SHCBP1 (Accession NP_079021.2) is another GAM7957 target gene, herein designated TARGET GENE. SHCBP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SHCBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHCBP1 BINDING SITE, designated SEQ ID:4225, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58226] Another function of GAM7957 is therefore inhibition of SHCBP1 (Accession NP_079021.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHCBP1.

[58227] Split hand/foot malformation (ectrodactyly) type 3 (SHFM3, Accession NP_071322.1) is another GAM7957 target gene, herein designated TARGET GENE. SHFM3 BINDING SITE is a target binding site found in the 5' un-

translated region of mRNA encoded by SHFM3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHFM3 BINDING SITE, designated SEQ ID:15889, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58228] Another function of GAM7957 is therefore inhibition of Split hand/foot malformation (ectrodactyly) type 3 (SHFM3, Accession NP_071322.1), a gene which probably binds to some phosphorylated proteins and promotes their degradation. and therefore may be associated with Split- hand/split- foot malformation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Split- hand/split- foot malformation, and of other diseases and clinical conditions associated with SHFM3.

[58229] The function of SHFM3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Soc-2 suppressor of clear homolog (c. elegans) (SHOC2, Accession NP_031399.1) is another GAM7957 target gene, herein designated TARGET GENE. SHOC2 BINDING SITE is a target binding site found in the

3' untranslated region of mRNA encoded by SHOC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHOC2 BINDING SITE, designated SEQ ID:10301, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58230] Another function of GAM7957 is therefore inhibition of Soc-2 suppressor of clear homolog (c. elegans) (SHOC2, Accession NP_031399.1), a gene which may be a regulator of the let-60 ras pathway. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHOC2.

[58231] The function of SHOC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM657.1.Sialyltransferase 8a (alpha-n-acetylneuraminate: alpha-2,8-sialyltransferase, gd3 synthase) (SIAT8A, Accession NP_003025.1) is another GAM7957 target gene, herein designated TARGET GENE. SIAT8A BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SIAT8A, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIAT8A BINDING SITE, designated SEQ ID:4881, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58232] Another function of GAM7957 is therefore inhibition of Sialyltransferase 8a (alpha-n-acetylneuraminase: alpha-2,8-sialyltransferase, gd3 synthase) (SIAT8A, Accession NP_003025.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIAT8A.

[58233] Sialic acid binding ig-like lectin 11 (SIGLEC11, Accession NP_443116.1) is another GAM7957 target gene, herein designated TARGET GENE. SIGLEC11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SIGLEC11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIGLEC11 BINDING SITE, designated SEQ ID:9765, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58234] Another function of GAM7957 is therefore inhibition of Sialic acid binding ig-like lectin 11 (SIGLEC11, Accession NP_443116.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIGLEC11.

[58235] Single-minded homolog 2 (drosophila) (SIM2, Accession NP_033664.1) is another GAM7957 target gene, herein designated TARGET GENE. SIM2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIM2 BINDING SITE, designated SEQ ID:15218, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58236] Another function of GAM7957 is therefore inhibition of Single-minded homolog 2 (drosophila) (SIM2, Accession NP_033664.1), a gene which may be a master gene of cns development. and therefore may be associated with Dysmorphic features, abnormalities of brain development, down syndrome. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Dysmorphic

features, abnormalities of brain development, down syndrome., and of other diseases and clinical conditions associated with SIM2.

[58237] The function of SIM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Solute carrier family 14 (urea transporter), member 1 (kidd blood group) (SLC14A1, Accession NP_056949.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC14A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC14A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC14A1 BINDING SITE, designated SEQ ID:4653, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58238] Another function of GAM7957 is therefore inhibition of Solute carrier family 14 (urea transporter), member 1 (kidd blood group) (SLC14A1, Accession NP_056949.1), a gene which is a urea transporters in spermatogenesis. and therefore may be associated with Urine concentration de-

fect. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Urine concentration defect, and of other diseases and clinical conditions associated with SLC14A1.

[58239] The function of SLC14A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Solute carrier family 14 (urea transporter), member 2 (SLC14A2, Accession NP_009094.2) is another GAM7957 target gene, herein designated TARGET GENE. SLC14A2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC14A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC14A2 BINDING SITE, designated SEQ ID:9991, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58240] Another function of GAM7957 is therefore inhibition of Solute carrier family 14 (urea transporter), member 2 (SLC14A2, Accession NP_009094.2), a gene which is a renal urea transporter 2. and therefore may be associated with Orthostatic hypotension. Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of Orthostatic hypotension, and of other diseases and clinical conditions associated with SLC14A2.

[58241] The function of SLC14A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM97.1.Solute carrier family 16 (monocarboxylic acid transporters), member 2 (putative transporter) (SLC16A2, Accession NP_006508.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC16A2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SLC16A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC16A2 BINDING SITE, designated SEQ ID:8449, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58242] Another function of GAM7957 is therefore inhibition of Solute carrier family 16 (monocarboxylic acid transporters), member 2 (putative transporter) (SLC16A2, Accession NP_006508.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with SLC16A2.

[58243] Solute carrier family 17 (anion/sugar transporter), member 5 (SLC17A5, Accession NP_036566.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC17A5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC17A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC17A5 BINDING SITE, designated SEQ ID:7865, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58244] Another function of GAM7957 is therefore inhibition of Solute carrier family 17 (anion/sugar transporter), member 5 (SLC17A5, Accession NP_036566.1), a gene which is a member of a family of anion/cation symporters and therefore may be associated with Salla disease ; infantile sialic acid storage disorder. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Salla disease ; infantile sialic acid storage disorder, and of other diseases and clinical conditions associated with SLC17A5.

[58245] The function of SLC17A5 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2.Solute carrier family 21 (organic anion transporter), member 9 (SLC21A9, Accession NP_009187.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC21A9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC21A9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC21A9 BINDING SITE, designated SEQ ID:19542, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58246] Another function of GAM7957 is therefore inhibition of Solute carrier family 21 (organic anion transporter), member 9 (SLC21A9, Accession NP_009187.1), a gene which is Moderately similar to SLC21A2 prostaglandin transporter. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC21A9.

[58247] The function of SLC21A9 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM71.1.Solute carrier family 22 (organic cation transporter), member 2 (SLC22A2, Accession NP_694861.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC22A2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SLC22A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC22A2 BINDING SITE, designated SEQ ID:2052, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58248] Another function of GAM7957 is therefore inhibition of Solute carrier family 22 (organic cation transporter), member 2 (SLC22A2, Accession NP_694861.1), a gene which is an organic cation transporter that may mediate first step in cation resorption. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC22A2.

[58249] The function of SLC22A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM247.2.SLC23A3 (Accession NP_653313.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC23A3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC23A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC23A3 BINDING SITE, designated SEQ ID:7727, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58250] Another function of GAM7957 is therefore inhibition of SLC23A3 (Accession NP_653313.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC23A3.

[58251] Solute carrier family 25 (mitochondrial carrier; ornithine transporter) member 15 (SLC25A15, Accession NP_055067.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC25A15 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC25A15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC25A15 BINDING SITE, designated SEQ ID:12480, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58252] Another function of GAM7957 is therefore inhibition of Solute carrier family 25 (mitochondrial carrier; ornithine transporter) member 15 (SLC25A15, Accession NP_055067.1), a gene which participates the ornithine transport across inner mitochondrial membrane, from the cytoplasm to the matrix and therefore is associated with Hyperornithinemia– hyperammonemia– homocitrullinuria syndrome (hhh syndrome). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Hyperornithinemia– hyperammonemia– homocitrullinuria syndrome (hhh syndrome), and of other diseases and clinical conditions associated with SLC25A15.

[58253] The function of SLC25A15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1. Solute carrier family 26, member 4 (SLC26A4, Accession NP_000432.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC26A4 BINDING SITE

is a target binding site found in the 3' untranslated region of mRNA encoded by SLC26A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC26A4 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58254] Another function of GAM7957 is therefore inhibition of Solute carrier family 26, member 4 (SLC26A4, Accession NP_000432.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC26A4.

[58255] Solute carrier family 28 (sodium-coupled nucleoside transporter), member 2 (SLC28A2, Accession NP_004203.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC28A2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC28A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC28A2 BINDING SITE, designated SEQ ID:16463, to the nucleotide se-

quence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58256] Another function of GAM7957 is therefore inhibition of Solute carrier family 28 (sodium-coupled nucleoside transporter), member 2 (SLC28A2, Accession NP_004203.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC28A2.

[58257] Solute carrier family 2 (facilitated glucose transporter), member 3 (SLC2A3, Accession NP_008862.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC2A3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC2A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC2A3 BINDING SITE, designated SEQ ID:15860, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58258] Another function of GAM7957 is therefore inhibition of Solute carrier family 2 (facilitated glucose transporter), member 3 (SLC2A3, Accession NP_008862.1), a gene which probably is a neuronal glucose transporter. Accord-

ingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC2A3.

[58259] The function of SLC2A3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.Solute carrier family 31 (copper transporters), member 1 (SLC31A1, Accession NP_001850.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC31A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC31A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC31A1 BINDING SITE, designated SEQ ID:18685, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58260] Another function of GAM7957 is therefore inhibition of Solute carrier family 31 (copper transporters), member 1 (SLC31A1, Accession NP_001850.1), a gene which is involved in high-affinity copper uptake. Accordingly, utilities of GAM7957 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with SLC31A1.

[58261] The function of SLC31A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.SLC35E1 (Accession NP_079157.2) is another GAM7957 target gene, herein designated TARGET GENE. SLC35E1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC35E1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E1 BINDING SITE, designated SEQ ID:6652, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58262] Another function of GAM7957 is therefore inhibition of SLC35E1 (Accession NP_079157.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E1.

[58263] SLC35E2 (Accession XP_049733.6) is another GAM7957 target gene, herein designated TARGET GENE. SLC35E2

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC35E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E2 BINDING SITE, designated SEQ ID:6363, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58264] Another function of GAM7957 is therefore inhibition of SLC35E2 (Accession XP_049733.6) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E2.

[58265] SLC35E3 (Accession NP_061126.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC35E3 BINDING SITE1 and SLC35E3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SLC35E3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E3 BINDING SITE1 and SLC35E3 BINDING SITE2, designated SEQ ID:4801 and SEQ ID:16325 respectively, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58266] Another function of GAM7957 is therefore inhibition of SLC35E3 (Accession NP_061126.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E3.

[58267] Solute carrier family 6 (neurotransmitter transporter, taurine), member 6 (SLC6A6, Accession NP_003034.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC6A6 BINDING SITE1 and SLC6A6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SLC6A6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A6 BINDING SITE1 and SLC6A6 BINDING SITE2, designated SEQ ID:10881 and SEQ ID:11013 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58268] Another function of GAM7957 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter, taurine), member 6 (SLC6A6, Accession NP_003034.1), a

gene which transports taurine and other beta- amino acids like beta- alanine. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A6.

[58269] The function of SLC6A6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2.Solute carrier family 7, (cationic amino acid transporter, γ^+ system) member 11 (SLC7A11, Accession NP_055146.1) is another GAM7957 target gene, herein designated TARGET GENE. SLC7A11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SLC7A11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC7A11 BINDING SITE, designated SEQ ID:19054, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58270] Another function of GAM7957 is therefore inhibition of Solute carrier family 7, (cationic amino acid transporter, γ^+ system) member 11 (SLC7A11, Accession NP_055146.1) . Accordingly, utilities of GAM7957 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC7A11.

[58271] SMA3 (Accession NP_006771.1) is another GAM7957 target gene, herein designated TARGET GENE. SMA3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SMA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMA3 BINDING SITE, designated SEQ ID:18653, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58272] Another function of GAM7957 is therefore inhibition of SMA3 (Accession NP_006771.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMA3.

[58273] SMAP-5 (Accession NP_110426.3) is another GAM7957 target gene, herein designated TARGET GENE. SMAP-5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SMAP-5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

SMAP-5 BINDING SITE, designated SEQ ID:10571, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58274] Another function of GAM7957 is therefore inhibition of SMAP-5 (Accession NP_110426.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMAP-5.

[58275] Smc1 structural maintenance of chromosomes 1-like 1 (yeast) (SMC1L1, Accession NP_006297.2) is another GAM7957 target gene, herein designated TARGET GENE. SMC1L1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SMC1L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMC1L1 BINDING SITE, designated SEQ ID:938, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58276] Another function of GAM7957 is therefore inhibition of Smc1 structural maintenance of chromosomes 1-like 1 (yeast) (SMC1L1, Accession NP_006297.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with SMC1L1.

[58277] SMG1 (Accession NP_054725.1) is another GAM7957 target gene, herein designated TARGET GENE. SMG1 BINDING SITE1 and SMG1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SMG1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMG1 BINDING SITE1 and SMG1 BINDING SITE2, designated SEQ ID:10571 and SEQ ID:13155 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58278] Another function of GAM7957 is therefore inhibition of SMG1 (Accession NP_054725.1), a gene which acts as the target for the cell- cycle arrest and immunosuppressive effects. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMG1.

[58279] The function of SMG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM207.2.SMG1 (Accession NP_054725.1) is another GAM7957 target gene, herein designated TARGET GENE. SMG1 BINDING SITE1 and SMG1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SMG1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMG1 BINDING SITE1 and SMG1 BINDING SITE2, designated SEQ ID:13155 and SEQ ID:10571 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58280] Another function of GAM7957 is therefore inhibition of SMG1 (Accession NP_054725.1), a gene which acts as the target for the cell- cycle arrest and immunosuppressive effects. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMG1.

[58281] The function of SMG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.Small nuclear rna activating complex, polypeptide 2, 45kda (SNAPC2, Accession NP_003074.1)

is another GAM7957 target gene, herein designated TARGET GENE. SNAPC2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SNAPC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNAPC2 BINDING SITE, designated SEQ ID:5533, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58282] Another function of GAM7957 is therefore inhibition of Small nuclear rna activating complex, polypeptide 2, 45kda (SNAPC2, Accession NP_003074.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAPC2.

[58283] SNX22 (Accession NP_079074.1) is another GAM7957 target gene, herein designated TARGET GENE. SNX22 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SNX22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX22

BINDING SITE, designated SEQ ID:876, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58284] Another function of GAM7957 is therefore inhibition of SNX22 (Accession NP_079074.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX22.

[58285] Sry (sex determining region y)-box 7 (SOX7, Accession NP_113627.1) is another GAM7957 target gene, herein designated TARGET GENE. SOX7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SOX7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SOX7 BINDING SITE, designated SEQ ID:15980, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58286] Another function of GAM7957 is therefore inhibition of Sry (sex determining region y)-box 7 (SOX7, Accession NP_113627.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SOX7.

[58287] Spastic paraplegia 4 (autosomal dominant; spastin) (SPG4, Accession NP_055761.2) is another GAM7957 target gene, herein designated TARGET GENE. SPG4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SPG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPG4 BINDING SITE, designated SEQ ID:12724, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58288] Another function of GAM7957 is therefore inhibition of Spastic paraplegia 4 (autosomal dominant; spastin) (SPG4, Accession NP_055761.2), a gene which is probably an ATPase involved in the assembly or function of nuclear protein complexes and therefore may be associated with Spastic paraparesis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Spastic paraparesis, and of other diseases and clinical conditions associated with SPG4.

[58289] The function of SPG4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM374.1.Spi-b transcription factor (spi-1/pu.1 related) (SPIB, Accession NP_003112.1) is another GAM7957 target gene, herein designated TARGET GENE. SPIB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SPIB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPIB BINDING SITE, designated SEQ ID:7007, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58290] Another function of GAM7957 is therefore inhibition of Spi-b transcription factor (spi-1/pu.1 related) (SPIB, Accession NP_003112.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPIB.

[58291] Spir-2 (Accession XP_047462.4) is another GAM7957 target gene, herein designated TARGET GENE. Spir-2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by Spir-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Spir-2

BINDING SITE, designated SEQ ID:17700, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58292] Another function of GAM7957 is therefore inhibition of Spir-2 (Accession XP_047462.4) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Spir-2.

[58293] Serine palmitoyltransferase, long chain base subunit 1 (SPTLC1, Accession NP_847894.1) is another GAM7957 target gene, herein designated TARGET GENE. SPTLC1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SPTLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPTLC1 BINDING SITE, designated SEQ ID:13585, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58294] Another function of GAM7957 is therefore inhibition of Serine palmitoyltransferase, long chain base subunit 1 (SPTLC1, Accession NP_847894.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with SPTLC1.

[58295] Serine palmitoyltransferase, long chain base subunit 2 (SPTLC2, Accession NP_004854.1) is another GAM7957 target gene, herein designated TARGET GENE. SPTLC2 BINDING SITE1 through SPTLC2 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by SPTLC2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPTLC2 BINDING SITE1 through SPTLC2 BINDING SITE3, designated SEQ ID:6941, SEQ ID:14784 and SEQ ID:15328 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58296] Another function of GAM7957 is therefore inhibition of Serine palmitoyltransferase, long chain base subunit 2 (SPTLC2, Accession NP_004854.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPTLC2.

[58297] SRGAP1 (Accession XP_051143.3) is another GAM7957 target gene, herein designated TARGET GENE. SRGAP1

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SRGAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRGAP1 BINDING SITE, designated SEQ ID:10721, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58298] Another function of GAM7957 is therefore inhibition of SRGAP1 (Accession XP_051143.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRGAP1.

[58299] Synovial sarcoma translocation gene on chromosome 18-like 1 (SS18L1, Accession NP_056373.1) is another GAM7957 target gene, herein designated TARGET GENE. SS18L1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SS18L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SS18L1 BINDING SITE, designated SEQ ID:7922, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58300] Another function of GAM7957 is therefore inhibition of Synovial sarcoma translocation gene on chromosome 18-like 1 (SS18L1, Accession NP_056373.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SS18L1.

[58301] SSH2 (Accession NP_203747.1) is another GAM7957 target gene, herein designated TARGET GENE. SSH2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SSH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SSH2 BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58302] Another function of GAM7957 is therefore inhibition of SSH2 (Accession NP_203747.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSH2.

[58303] Signal sequence receptor, gamma (translocon-associated protein gamma) (SSR3, Accession NP_009038.1) is another GAM7957 target gene, herein designated TARGET GENE.

SSR3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SSR3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SSR3 BINDING SITE, designated SEQ ID:12338, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58304] Another function of GAM7957 is therefore inhibition of Signal sequence receptor, gamma (translocon-associated protein gamma) (SSR3, Accession NP_009038.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSR3.

[58305] Structure specific recognition protein 1 (SSRP1, Accession NP_003137.1) is another GAM7957 target gene, herein designated TARGET GENE. SSRP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SSRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SSRP1 BINDING SITE, designated SEQ ID:11518, to the nucleotide sequence of GAM7957

RNA, herein designated GAM RNA, also designated SEQ ID:297.

- [58306] Another function of GAM7957 is therefore inhibition of Structure specific recognition protein 1 (SSRP1, Accession NP_003137.1), a gene which has specific affinity for DNA modified with cisplatin and has a region of homology to HMG- box DNA binding proteins. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSRP1.
- [58307] The function of SSRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM711.1.Synovial sarcoma, x breakpoint 2 interacting protein (SSX2IP, Accession NP_054740.1) is another GAM7957 target gene, herein designated TARGET GENE. SSX2IP BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by SSX2IP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SSX2IP BINDING SITE, designated SEQ ID:8979, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58308] Another function of GAM7957 is therefore inhibition of Synovial sarcoma, x breakpoint 2 interacting protein (SSX2IP, Accession NP_054740.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSX2IP.

[58309] Signal transducer and activator of transcription 3 (acute-phase response factor) (STAT3, Accession NP_003141.2) is another GAM7957 target gene, herein designated TARGET GENE. STAT3 BINDING SITE1 and STAT3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by STAT3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAT3 BINDING SITE1 and STAT3 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:5830 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58310] Another function of GAM7957 is therefore inhibition of Signal transducer and activator of transcription 3 (acute-phase response factor) (STAT3, Accession NP_003141.2), a gene which carries out a dual function:

signal transduction and activation of transcription. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAT3.

[58311] The function of STAT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Signal transducer and activator of transcription 3 (acute-phase response factor) (STAT3, Accession NP_003141.2) is another GAM7957 target gene, herein designated TARGET GENE. STAT3 BINDING SITE1 and STAT3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by STAT3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAT3 BINDING SITE1 and STAT3 BINDING SITE2, designated SEQ ID:18951 and SEQ ID:18951 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58312] Another function of GAM7957 is therefore inhibition of Signal transducer and activator of transcription 3

(acute-phase response factor) (STAT3, Accession NP_003141.2), a gene which carries out a dual function: signal transduction and activation of transcription. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAT3.

[58313] The function of STAT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Syntaxin 1a (brain) (STX1A, Accession NP_004594.1) is another GAM7957 target gene, herein designated TARGET GENE. STX1A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by STX1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STX1A BINDING SITE, designated SEQ ID:5464, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58314] Another function of GAM7957 is therefore inhibition of Syntaxin 1a (brain) (STX1A, Accession NP_004594.1), a gene which may play a critical role in neurotransmitter

exocytosis. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STX1A.

[58315] The function of STX1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM158.1. Sudd suppressor of bimD6 homolog (a. nidulans) (SUDD, Accession NP_665913.1) is another GAM7957 target gene, herein designated TARGET GENE. SUDD BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SUDD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SUDD BINDING SITE, designated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58316] Another function of GAM7957 is therefore inhibition of Sudd suppressor of bimD6 homolog (a. nidulans) (SUDD, Accession NP_665913.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUDD.

[58317] Sudd suppressor of bimd6 homolog (a. nidulans) (SUDD, Accession NP_003822.2) is another GAM7957 target gene, herein designated TARGET GENE. SUDD BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SUDD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SUDD BINDING SITE, designated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58318] Another function of GAM7957 is therefore inhibition of Sudd suppressor of bimd6 homolog (a. nidulans) (SUDD, Accession NP_003822.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUDD.

[58319] Sulfotransferase family, cytosolic, 2a, dehydroepiandrosterone (dhea) -preferring, member 1 (SULT2A1, Accession NP_003158.2) is another GAM7957 target gene, herein designated TARGET GENE. SULT2A1 BINDING SITE1 and SULT2A1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SULT2A1, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SULT2A1 BINDING SITE1 and SULT2A1 BINDING SITE2, designated SEQ ID:11833 and SEQ ID:16320 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58320] Another function of GAM7957 is therefore inhibition of Sulfotransferase family, cytosolic, 2a, dehydroepiandrosterone (dhea) -preferring, member 1 (SULT2A1, Accession NP_003158.2), a gene which catalyzes the sulfation of steroids and bile acids in the liver and adrenal glands. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SULT2A1.

[58321] The function of SULT2A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.SUV39H2 (Accession NP_078946.1) is another GAM7957 target gene, herein designated TARGET GENE. SUV39H2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SUV39H2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SUV39H2 BINDING SITE, designated SEQ ID:2697, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58322] Another function of GAM7957 is therefore inhibition of SUV39H2 (Accession NP_078946.1), a gene which is involved in gene repression and the modification of position-effect-variegation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUV39H2.

[58323] The function of SUV39H2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1.SV2A (Accession NP_055664.1) is another GAM7957 target gene, herein designated TARGET GENE. SV2A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SV2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SV2A BINDING SITE, designated SEQ ID:15941, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[58324] Another function of GAM7957 is therefore inhibition of SV2A (Accession NP_055664.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SV2A.

[58325] SWAP70 (Accession XP_049197.2) is another GAM7957 target gene, herein designated TARGET GENE. SWAP70 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SWAP70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SWAP70 BINDING SITE, designated SEQ ID:18423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58326] Another function of GAM7957 is therefore inhibition of SWAP70 (Accession XP_049197.2), a gene which is involved not only in nuclear events but also in signaling in B- cell activation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SWAP70.

[58327] The function of SWAP70 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.SWAP70 (Accession NP_055870.1) is another GAM7957 target gene, herein designated TARGET GENE. SWAP70 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SWAP70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SWAP70 BINDING SITE, designated SEQ ID:18423, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58328] Another function of GAM7957 is therefore inhibition of SWAP70 (Accession NP_055870.1), a gene which is involved not only in nuclear events but also in signaling in B- cell activation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SWAP70.

[58329] The function of SWAP70 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.Reserved (SYAP1, Accession NP_116185.2) is

another GAM7957 target gene, herein designated TARGET GENE. SYAP1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SYAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYAP1 BINDING SITE, designated SEQ ID:4339, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58330] Another function of GAM7957 is therefore inhibition of Reserved (SYAP1, Accession NP_116185.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYAP1.

[58331] Synaptogyrin 1 (SYNGR1, Accession NP_004702.2) is another GAM7957 target gene, herein designated TARGET GENE. SYNGR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by SYNGR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYNGR1 BINDING SITE, designated SEQ ID:18392, to the nucleotide se-

quence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58332] Another function of GAM7957 is therefore inhibition of Synaptogyrin 1 (SYNGR1, Accession NP_004702.2), a gene which belongs to transmembrane synaptic vesicle protein and may function in membrane recycling. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYNGR1.

[58333] The function of SYNGR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1. Synaptotagmin xi (SYT11, Accession NP_689493.2) is another GAM7957 target gene, herein designated TARGET GENE. SYT11 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SYT11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT11 BINDING SITE, designated SEQ ID:18126, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58334] Another function of GAM7957 is therefore inhibition of Synaptotagmin xi (SYT11, Accession NP_689493.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT11.

[58335] TA-LRRP (Accession NP_056165.1) is another GAM7957 target gene, herein designated TARGET GENE. TA-LRRP BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TA-LRRP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TA-LRRP BINDING SITE, designated SEQ ID:4246, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58336] Another function of GAM7957 is therefore inhibition of TA-LRRP (Accession NP_056165.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TA-LRRP.

[58337] Transforming, acidic coiled-coil containing protein 1 (TACC1, Accession NP_006274.1) is another GAM7957 target gene, herein designated TARGET GENE. TACC1

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TACC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TACC1 BINDING SITE, designated SEQ ID:14784, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58338] Another function of GAM7957 is therefore inhibition of Transforming, acidic coiled-coil containing protein 1 (TACC1, Accession NP_006274.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TACC1.

[58339] TACTILE (Accession NP_005807.1) is another GAM7957 target gene, herein designated TARGET GENE. TACTILE BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TACTILE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TACTILE BINDING SITE, designated SEQ ID:19031, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58340] Another function of GAM7957 is therefore inhibition of TACTILE (Accession NP_005807.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TACTILE.

[58341] Transcriptional adaptor 2 (ada2 homolog, yeast)-like (TADA2L, Accession NP_001479.2) is another GAM7957 target gene, herein designated TARGET GENE. TADA2L BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TADA2L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TADA2L BINDING SITE, designated SEQ ID:9344, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58342] Another function of GAM7957 is therefore inhibition of Transcriptional adaptor 2 (ada2 homolog, yeast)-like (TADA2L, Accession NP_001479.2), a gene which is one PCAF histone acetylase complex subunit, and a probable transcriptional adaptor protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with TADA2L.

[58343] The function of TADA2L and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.TADA3L (Accession NP_597814.1) is another GAM7957 target gene, herein designated TARGET GENE. TADA3L BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TADA3L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TADA3L BINDING SITE, designated SEQ ID:9420, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58344] Another function of GAM7957 is therefore inhibition of TADA3L (Accession NP_597814.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TADA3L.

[58345] Taf1-like rna polymerase ii, tata box binding protein (tbp)-associated factor, 210kda (TAF1L, Accession NP_722516.1) is another GAM7957 target gene, herein

designated TARGET GENE. TAF1L BINDING SITE1 and TAF1L BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TAF1L, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAF1L BINDING SITE1 and TAF1L BINDING SITE2, designated SEQ ID:4247 and SEQ ID:585 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58346] Another function of GAM7957 is therefore inhibition of Taf1-like rna polymerase ii, tata box binding protein (tbp)-associated factor, 210kda (TAF1L, Accession NP_722516.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAF1L.

[58347] TARSH (Accession NP_079077.1) is another GAM7957 target gene, herein designated TARGET GENE. TARSH BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TARSH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of TARSH BINDING SITE, designated SEQ ID:9763, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58348] Another function of GAM7957 is therefore inhibition of TARSH (Accession NP_079077.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TARSH.

[58349] TBRG1 (Accession NP_116200.1) is another GAM7957 target gene, herein designated TARGET GENE. TBRG1 BINDING SITE1 and TBRG1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TBRG1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBRG1 BINDING SITE1 and TBRG1 BINDING SITE2, designated SEQ ID:10438 and SEQ ID:19130 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58350] Another function of GAM7957 is therefore inhibition of TBRG1 (Accession NP_116200.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with TBGR1.

[58351] T-box 1 (TBX1, Accession NP_005983.1) is another GAM7957 target gene, herein designated TARGET GENE. TBX1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TBX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX1 BINDING SITE, designated SEQ ID:9841, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58352] Another function of GAM7957 is therefore inhibition of T-box 1 (TBX1, Accession NP_005983.1), a gene which may act as a transcription factor and contains a T-box DNA binding domain. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX1.

[58353] The function of TBX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. T-box 19 (TBX19, Accession NP_005140.1) is another GAM7957 target gene, herein designated TAR-

GET GENE. TBX19 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TBX19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX19 BINDING SITE, designated SEQ ID:7816, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58354] Another function of GAM7957 is therefore inhibition of T-box 19 (TBX19, Accession NP_005140.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX19.

[58355] T-box 6 (TBX6, Accession NP_542936.1) is another GAM7957 target gene, herein designated TARGET GENE. TBX6 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TBX6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX6 BINDING SITE, designated SEQ ID:19047, to the nucleotide sequence of GAM7957

RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58356] Another function of GAM7957 is therefore inhibition of T-box 6 (TBX6, Accession NP_542936.1), a gene which is a probable transcriptional regulator involved in developmental processes. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX6.

[58357] The function of TBX6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM59.1. Transcription factor 4 (TCF4, Accession NP_003190.1) is another GAM7957 target gene, herein designated TARGET GENE. TCF4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TCF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCF4 BINDING SITE, designated SEQ ID:839, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58358] Another function of GAM7957 is therefore inhibition of Transcription factor 4 (TCF4, Accession NP_003190.1), a

gene which is a transcriptional activator; interacts with ITF1 (TCF3); and contains basic helix– loop– helix domain. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCF4.

[58359] The function of TCF4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM180.1. Transcription factor 7 (t-cell specific, hmg-box) (TCF7, Accession NP_003193.1) is another GAM7957 target gene, herein designated TARGET GENE. TCF7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TCF7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCF7 BINDING SITE, designated SEQ ID:2362, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58360] Another function of GAM7957 is therefore inhibition of Transcription factor 7 (t-cell specific, hmg-box) (TCF7, Accession NP_003193.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with TCF7.

[58361] T-cell leukemia translocation altered gene (TCTA, Accession NP_071503.1) is another GAM7957 target gene, herein designated TARGET GENE. TCTA BINDING SITE1 and TCTA BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TCTA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCTA BINDING SITE1 and TCTA BINDING SITE2, designated SEQ ID:20025 and SEQ ID:17399 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58362] Another function of GAM7957 is therefore inhibition of T-cell leukemia translocation altered gene (TCTA, Accession NP_071503.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCTA.

[58363] TDE1L (Accession NP_065806.1) is another GAM7957 target gene, herein designated TARGET GENE. TDE1L BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TDE1L, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TDE1L BINDING SITE, designated SEQ ID:2974, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58364] Another function of GAM7957 is therefore inhibition of TDE1L (Accession NP_065806.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TDE1L.

[58365] TEM6 (Accession NP_073585.6) is another GAM7957 target gene, herein designated TARGET GENE. TEM6 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TEM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TEM6 BINDING SITE, designated SEQ ID:19194, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58366] Another function of GAM7957 is therefore inhibition of TEM6 (Accession NP_073585.6), a gene which displays elevated expression during tumor angiogenesis. Accordingly, utilities of GAM7957 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with TEM6.

[58367] The function of TEM6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1. TEM7 (Accession NP_065138.2) is another GAM7957 target gene, herein designated TARGET GENE. TEM7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TEM7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TEM7 BINDING SITE, designated SEQ ID:17985, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58368] Another function of GAM7957 is therefore inhibition of TEM7 (Accession NP_065138.2), a gene which involves in angiogenesis and therefore may be associated with Colorectal cancer. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Colorectal cancer, and of other diseases and clinical conditions associated with TEM7.

[58369] The function of TEM7 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.TIP47 (Accession NP_005808.2) is another GAM7957 target gene, herein designated TARGET GENE. TIP47 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TIP47, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIP47 BINDING SITE, designated SEQ ID:18951, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58370] Another function of GAM7957 is therefore inhibition of TIP47 (Accession NP_005808.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIP47.

[58371] Triple homeobox 1 (TIX1, Accession NP_055850.1) is another GAM7957 target gene, herein designated TARGET GENE. TIX1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TIX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of TIX1 BINDING SITE, designated SEQ ID:17424, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58372] Another function of GAM7957 is therefore inhibition of Triple homeobox 1 (TIX1, Accession NP_055850.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIX1.

[58373] Tight junction protein 1 (zona occludens 1) (TJP1, Accession NP_783297.1) is another GAM7957 target gene, herein designated TARGET GENE. TJP1 BINDING SITE1 and TJP1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TJP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TJP1 BINDING SITE1 and TJP1 BINDING SITE2, designated SEQ ID:7287 and SEQ ID:18566 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58374] Another function of GAM7957 is therefore inhibition of Tight junction protein 1 (zona occludens 1) (TJP1, Accession NP_783297.1), a gene which colocalizes and interacts

with cadherins in cells lacking tight junctions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TJP1.

[58375] The function of TJP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1. Tight junction protein 1 (zona occludens 1) (TJP1, Accession NP_003248.2) is another GAM7957 target gene, herein designated TARGET GENE. TJP1 BINDING SITE1 and TJP1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TJP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TJP1 BINDING SITE1 and TJP1 BINDING SITE2, designated SEQ ID:18566 and SEQ ID:7287 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58376] Another function of GAM7957 is therefore inhibition of Tight junction protein 1 (zona occludens 1) (TJP1, Accession NP_003248.2), a gene which colocalizes and interacts

with cadherins in cells lacking tight junctions. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TJP1.

[58377] The function of TJP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1. Transmembrane protein 1 (TMEM1, Accession NP_003265.2) is another GAM7957 target gene, herein designated TARGET GENE. TMEM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TMEM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMEM1 BINDING SITE, designated SEQ ID:19683, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58378] Another function of GAM7957 is therefore inhibition of Transmembrane protein 1 (TMEM1, Accession NP_003265.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM1.

[58379] Transmembrane protein 4 (TMEM4, Accession NP_055070.1) is another GAM7957 target gene, herein designated TARGET GENE. TMEM4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TMEM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMEM4 BINDING SITE, designated SEQ ID:12891, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58380] Another function of GAM7957 is therefore inhibition of Transmembrane protein 4 (TMEM4, Accession NP_055070.1), a gene which is a putative type II membrane protein. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM4.

[58381] The function of TMEM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1. TMG4 (Accession NP_076986.1) is another GAM7957 target gene, herein designated TARGET GENE. TMG4 BINDING SITE is a target binding site found in the

3' untranslated region of mRNA encoded by TMG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMG4 BINDING SITE, designated SEQ ID:3326, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58382] Another function of GAM7957 is therefore inhibition of TMG4 (Accession NP_076986.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMG4.

[58383] Tumor necrosis factor receptor superfamily, member 1b (TNFRSF1B, Accession NP_001057.1) is another GAM7957 target gene, herein designated TARGET GENE. TNFRSF1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TNFRSF1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF1B BINDING SITE, designated SEQ ID:13649, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58384] Another function of GAM7957 is therefore inhibition of

Tumor necrosis factor receptor superfamily, member 1b (TNFRSF1B, Accession NP_001057.1), a gene which mediates proinflammatory cellular responses. and therefore may be associated with Familial combined hyperlipidemia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Familial combined hyperlipidemia., and of other diseases and clinical conditions associated with TNFRSF1B.

[58385] The function of TNFRSF1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Tumor necrosis factor (ligand) superfamily, member 10 (TNFSF10, Accession NP_003801.1) is another GAM7957 target gene, herein designated TARGET GENE. TNFSF10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TNFSF10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFSF10 BINDING SITE, designated SEQ ID:6521, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58386] Another function of GAM7957 is therefore inhibition of

Tumor necrosis factor (ligand) superfamily, member 10 (TNFSF10, Accession NP_003801.1), a gene which mediates cell death. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFSF10.

[58387] The function of TNFSF10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Tumor necrosis factor (ligand) superfamily, member 14 (TNFSF14, Accession NP_003798.2) is another GAM7957 target gene, herein designated TARGET GENE. TNFSF14 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TNFSF14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFSF14 BINDING SITE, designated SEQ ID:722, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58388] Another function of GAM7957 is therefore inhibition of Tumor necrosis factor (ligand) superfamily, member 14 (TNFSF14, Accession NP_003798.2), a gene which acts as

a receptor for herpes simplex virus. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFSF14.

[58389] The function of TNFSF14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM236.1. Tumor necrosis factor (ligand) superfamily, member 14 (TNFSF14, Accession NP_742011.1) is another GAM7957 target gene, herein designated TARGET GENE. TNFSF14 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TNFSF14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFSF14 BINDING SITE, designated SEQ ID:722, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58390] Another function of GAM7957 is therefore inhibition of Tumor necrosis factor (ligand) superfamily, member 14 (TNFSF14, Accession NP_742011.1), a gene which acts as a receptor for herpes simplex virus. Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFSF14.

[58391] The function of TNFSF14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM236.1. Tumor necrosis factor (ligand) superfamily, member 15 (TNFSF15, Accession NP_005109.2) is another GAM7957 target gene, herein designated TARGET GENE. TNFSF15 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TNFSF15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFSF15 BINDING SITE, designated SEQ ID:1981, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58392] Another function of GAM7957 is therefore inhibition of Tumor necrosis factor (ligand) superfamily, member 15 (TNFSF15, Accession NP_005109.2), a gene which acts as an autocrine factor to induce apoptosis in endothelial cells. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with TNFSF15.

[58393] The function of TNFSF15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM100.1.Tnfaip3 interacting protein 3 (TNIP3, Accession NP_079149.2) is another GAM7957 target gene, herein designated TARGET GENE. TNIP3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TNIP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNIP3 BINDING SITE, designated SEQ ID:16969, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58394] Another function of GAM7957 is therefore inhibition of Tnfaip3 interacting protein 3 (TNIP3, Accession NP_079149.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNIP3.

[58395] Trinucleotide repeat containing 5 (TNRC5, Accession NP_006577.1) is another GAM7957 target gene, herein designated TARGET GENE. TNRC5 BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by TNRC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNRC5 BINDING SITE, designated SEQ ID:17344, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58396] Another function of GAM7957 is therefore inhibition of Trinucleotide repeat containing 5 (TNRC5, Accession NP_006577.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNRC5.

[58397] TP53I5 (Accession XP_290532.2) is another GAM7957 target gene, herein designated TARGET GENE. TP53I5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TP53I5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53I5 BINDING SITE, designated SEQ ID:13608, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58398] Another function of GAM7957 is therefore inhibition of TP53I5 (Accession XP_290532.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TP53I5.

[58399] Tropomyosin 4 (TPM4, Accession NP_003281.1) is another GAM7957 target gene, herein designated TARGET GENE. TPM4 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TPM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPM4 BINDING SITE, designated SEQ ID:19193, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58400] Another function of GAM7957 is therefore inhibition of Tropomyosin 4 (TPM4, Accession NP_003281.1), a gene which plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle contraction. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TPM4.

[58401] The function of TPM4 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM72.1.Tnfrsf1a-associated via death domain (TRADD, Accession NP_003780.1) is another GAM7957 target gene, herein designated TARGET GENE. TRADD BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRADD BINDING SITE, designated SEQ ID:15543, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58402] Another function of GAM7957 is therefore inhibition of Tnfrsf1a-associated via death domain (TRADD, Accession NP_003780.1), a gene which specifically interacts with the cytoplasmic domain of activated tnfr1. interacts with traf1 and traf2), fadd and rip. acts as an adaptor molecule for tnfr1 mediating its interaction with fadd. overexpression of tradd leads to two major tnfr1-induced responses, apoptosis and activation of nf- κ B. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with TRADD.

[58403] The function of TRADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1. Tnfrsf1a-associated via death domain (TRADD, Accession NP_700474.1) is another GAM7957 target gene, herein designated TARGET GENE. TRADD BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRADD BINDING SITE, designated SEQ ID:15543, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58404] Another function of GAM7957 is therefore inhibition of Tnfrsf1a-associated via death domain (TRADD, Accession NP_700474.1), a gene which specifically interacts with the cytoplasmic domain of activated tnfr1. interacts with traf1 (traf1 and traf2), fadd and rip. acts as an adaptor molecule for tnfr1 mediating its interaction with fadd. overexpression of tradd leads to two major tnf- induced

responses, apoptosis and activation of $\text{nf-}\kappa\text{b}$. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRADD.

[58405] The function of TRADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1. TRAM2 (Accession NP_036420.1) is another GAM7957 target gene, herein designated TARGET GENE. TRAM2 BINDING SITE1 and TRAM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TRAM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAM2 BINDING SITE1 and TRAM2 BINDING SITE2, designated SEQ ID:5830 and SEQ ID:9810 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58406] Another function of GAM7957 is therefore inhibition of TRAM2 (Accession NP_036420.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAM2.

[58407] TRB2 (Accession NP_067675.1) is another GAM7957 target gene, herein designated TARGET GENE. TRB2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRB2 BINDING SITE, designated SEQ ID:15438, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58408] Another function of GAM7957 is therefore inhibition of TRB2 (Accession NP_067675.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRB2.

[58409] TRIAD3 (Accession NP_061884.2) is another GAM7957 target gene, herein designated TARGET GENE. TRIAD3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRIAD3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIAD3 BINDING SITE, designated SEQ ID:17399, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[58410] Another function of GAM7957 is therefore inhibition of TRIAD3 (Accession NP_061884.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIAD3.

[58411] Tripartite motif-containing 14 (TRIM14, Accession NP_150089.1) is another GAM7957 target gene, herein designated TARGET GENE. TRIM14 BINDING SITE1 and TRIM14 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRIM14, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM14 BINDING SITE1 and TRIM14 BINDING SITE2, designated SEQ ID:17397 and SEQ ID:2835 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58412] Another function of GAM7957 is therefore inhibition of Tripartite motif-containing 14 (TRIM14, Accession NP_150089.1), a gene which is composed of 3 zinc-binding domains and is involved in development and cell growth. Accordingly, utilities of GAM7957 include diagno-

sis, prevention and treatment of diseases and clinical conditions associated with TRIM14.

[58413] The function of TRIM14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Tripartite motif-containing 14 (TRIM14, Accession NP_055603.2) is another GAM7957 target gene, herein designated TARGET GENE. TRIM14 BINDING SITE1 and TRIM14 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRIM14, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM14 BINDING SITE1 and TRIM14 BINDING SITE2, designated SEQ ID:2835 and SEQ ID:8138 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58414] Another function of GAM7957 is therefore inhibition of Tripartite motif-containing 14 (TRIM14, Accession NP_055603.2), a gene which is composed of 3 zinc-binding domains and is involved in development and cell growth. Accordingly, utilities of GAM7957 include diagno-

sis, prevention and treatment of diseases and clinical conditions associated with TRIM14.

[58415] The function of TRIM14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1. Tripartite motif-containing 35 (TRIM35, Accession NP_741983.1) is another GAM7957 target gene, herein designated TARGET GENE. TRIM35 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRIM35, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM35 BINDING SITE, designated SEQ ID:16080, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58416] Another function of GAM7957 is therefore inhibition of Tripartite motif-containing 35 (TRIM35, Accession NP_741983.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM35.

[58417] Tripartite motif-containing 35 (TRIM35, Accession NP_055881.1) is another GAM7957 target gene, herein

designated TARGET GENE. TRIM35 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRIM35, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM35 BINDING SITE, designated SEQ ID:16080, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58418] Another function of GAM7957 is therefore inhibition of Tripartite motif-containing 35 (TRIM35, Accession NP_055881.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM35.

[58419] TRIM46 (Accession NP_079334.1) is another GAM7957 target gene, herein designated TARGET GENE. TRIM46 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRIM46, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM46 BINDING SITE, designated SEQ ID:9420, to the nucleotide sequence of GAM7957 RNA, herein designated

GAM RNA, also designated SEQ ID:297.

[58420] Another function of GAM7957 is therefore inhibition of TRIM46 (Accession NP_079334.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM46.

[58421] TRIM56 (Accession XP_168586.1) is another GAM7957 target gene, herein designated TARGET GENE. TRIM56 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by TRIM56, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM56 BINDING SITE, designated SEQ ID:1762, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58422] Another function of GAM7957 is therefore inhibition of TRIM56 (Accession XP_168586.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM56.

[58423] TRIM56 (Accession NP_112223.1) is another GAM7957 target gene, herein designated TARGET GENE. TRIM56 BINDING SITE is a target binding site found in the 3' un-

translated region of multiple transcripts of mRNA encoded by TRIM56, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM56 BINDING SITE, designated SEQ ID:1762, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58424] Another function of GAM7957 is therefore inhibition of TRIM56 (Accession NP_112223.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM56.

[58425] Tripartite motif-containing 8 (TRIM8, Accession NP_112174.1) is another GAM7957 target gene, herein designated TARGET GENE. TRIM8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRIM8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM8 BINDING SITE, designated SEQ ID:6715, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58426] Another function of GAM7957 is therefore inhibition of Tripartite motif-containing 8 (TRIM8, Accession NP_112174.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM8.

[58427] Transient receptor potential cation channel, subfamily m, member 2 (TRPM2, Accession NP_003298.1) is another GAM7957 target gene, herein designated TARGET GENE. TRPM2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM2 BINDING SITE, designated SEQ ID:782, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58428] Another function of GAM7957 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 2 (TRPM2, Accession NP_003298.1), a gene which may be a calcium channel. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPM2.

[58429] The function of TRPM2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.1. Transient receptor potential cation channel, subfamily m, member 3 (TRPM3, Accession NP_079247.2) is another GAM7957 target gene, herein designated TARGET GENE. TRPM3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TRPM3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM3 BINDING SITE, designated SEQ ID:16946, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58430] Another function of GAM7957 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 3 (TRPM3, Accession NP_079247.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPM3.

[58431] Transient receptor potential cation channel, subfamily m, member 4 (TRPM4, Accession NP_060106.2) is another GAM7957 target gene, herein designated TARGET GENE.

TRPM4 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TRPM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM4 BINDING SITE, designated SEQ ID:2740, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58432] Another function of GAM7957 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 4 (TRPM4, Accession NP_060106.2), a gene which contains two transient receptor domains. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPM4.

[58433] The function of TRPM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2. Transient receptor potential cation channel, subfamily m, member 8 (TRPM8, Accession NP_076985.3) is another GAM7957 target gene, herein designated TARGET GENE. TRPM8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by

TRPM8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM8 BINDING SITE, designated SEQ ID:9731, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58434] Another function of GAM7957 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 8 (TRPM8, Accession NP_076985.3), a gene which is thought to form a receptor- activated calcium permeant cation channel. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPM8.

[58435] The function of TRPM8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.2. Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542437.1) is another GAM7957 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TRPV1, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE, designated SEQ ID:14712, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58436] Another function of GAM7957 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542437.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[58437] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.TSAP6 (Accession NP_060704.1) is another GAM7957 target gene, herein designated TARGET GENE. TSAP6 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TSAP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TSAP6 BINDING SITE, designated SEQ ID:15578, to the

nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58438] Another function of GAM7957 is therefore inhibition of TSAP6 (Accession NP_060704.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSAP6.

[58439] Translin-associated factor x (TSNAX, Accession NP_005990.1) is another GAM7957 target gene, herein designated TARGET GENE. TSNAX BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TSNAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TSNAX BINDING SITE, designated SEQ ID:13066, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58440] Another function of GAM7957 is therefore inhibition of Translin-associated factor x (TSNAX, Accession NP_005990.1), a gene which Interacts with translin (TSN). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSNAX.

[58441] The function of TSNAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1. Transcription termination factor, rna polymerase ii (TTF2, Accession NP_003585.2) is another GAM7957 target gene, herein designated TARGET GENE. TTF2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TTF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTF2 BINDING SITE, designated SEQ ID:6501, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58442] Another function of GAM7957 is therefore inhibition of Transcription termination factor, rna polymerase ii (TTF2, Accession NP_003585.2), a gene which is involved either in promoting the migration process or in repressing differentiation of the TFCs until migration has occurred and therefore may be associated with Bamforth-lazarus syndrome. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Bamforth-lazarus syndrome, and of other diseases and clinical conditions asso-

ciated with TTF2.

[58443] The function of TTF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM270.1.TU12B1-TY (Accession NP_057659.1) is another GAM7957 target gene, herein designated TARGET GENE. TU12B1-TY BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TU12B1-TY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TU12B1-TY BINDING SITE, designated SEQ ID:9085, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58444] Another function of GAM7957 is therefore inhibition of TU12B1-TY (Accession NP_057659.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TU12B1-TY.

[58445] U1SNRNPBP (Accession NP_851030.1) is another GAM7957 target gene, herein designated TARGET GENE. U1SNRNPBP BINDING SITE1 and U1SNRNPBP BINDING SITE2

are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of U1SNRNPBP BINDING SITE1 and U1SNRNPBP BINDING SITE2, designated SEQ ID:13066 and SEQ ID:1492 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58446] Another function of GAM7957 is therefore inhibition of U1SNRNPBP (Accession NP_851030.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with U1SNRNPBP.

[58447] U1SNRNPBP (Accession NP_851034.1) is another GAM7957 target gene, herein designated TARGET GENE. U1SNRNPBP BINDING SITE1 and U1SNRNPBP BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of U1SNRNPBP BINDING SITE1 and U1SNRNPBP BINDING SITE2, designated SEQ ID:13066 and SEQ ID:12063 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58448] Another function of GAM7957 is therefore inhibition of U1SNRNPBP (Accession NP_851034.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with U1SNRNPBP.

[58449] UBCE7IP5 (Accession NP_055763.1) is another GAM7957 target gene, herein designated TARGET GENE. UBCE7IP5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UBCE7IP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBCE7IP5 BINDING SITE, designated SEQ ID:14779, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58450] Another function of GAM7957 is therefore inhibition of UBCE7IP5 (Accession NP_055763.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with UBCE7IP5.

[58451] Ubiquitin-conjugating enzyme e2b (rad6 homolog) (UBE2B, Accession NP_003328.1) is another GAM7957 target gene, herein designated TARGET GENE. UBE2B BINDING SITE1 and UBE2B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by UBE2B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE2B BINDING SITE1 and UBE2B BINDING SITE2, designated SEQ ID:1890 and SEQ ID:12734 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58452] Another function of GAM7957 is therefore inhibition of Ubiquitin-conjugating enzyme e2b (rad6 homolog) (UBE2B, Accession NP_003328.1), a gene which catalyzes the covalent attachment of ubiquitin to other proteins and is required for postreplication repair of uv- damaged dna. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE2B.

[58453] The function of UBE2B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1. Ubiquitin-conjugating enzyme e2g 2 (ubc7 homolog, yeast) (UBE2G2, Accession NP_003334.2) is another GAM7957 target gene, herein designated TARGET GENE. UBE2G2 BINDING SITE1 and UBE2G2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by UBE2G2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE2G2 BINDING SITE1 and UBE2G2 BINDING SITE2, designated SEQ ID:11556 and SEQ ID:8877 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58454] Another function of GAM7957 is therefore inhibition of Ubiquitin-conjugating enzyme e2g 2 (ubc7 homolog, yeast) (UBE2G2, Accession NP_003334.2), a gene which catalyzes the covalent attachment of ubiquitin to other proteins. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE2G2.

[58455] The function of UBE2G2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.UNC5CL (Accession NP_775832.1) is another GAM7957 target gene, herein designated TARGET GENE. UNC5CL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UNC5CL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC5CL BINDING SITE, designated SEQ ID:8143, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58456] Another function of GAM7957 is therefore inhibition of UNC5CL (Accession NP_775832.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC5CL.

[58457] UNC5H2 (Accession NP_734465.1) is another GAM7957 target gene, herein designated TARGET GENE. UNC5H2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UNC5H2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC5H2 BINDING SITE, designated SEQ ID:14996, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58458] Another function of GAM7957 is therefore inhibition of UNC5H2 (Accession NP_734465.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC5H2.

[58459] Uroplakin 1b (UPK1B, Accession NP_008883.1) is another GAM7957 target gene, herein designated TARGET GENE. UPK1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by UPK1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UPK1B BINDING SITE, designated SEQ ID:19696, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58460] Another function of GAM7957 is therefore inhibition of Uroplakin 1b (UPK1B, Accession NP_008883.1), a gene which strengthens and stabilizes the urothelial apical sur-

face of the asymmetric unit membrane of mammalian bladder epithelium. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UPK1B.

[58461] The function of UPK1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1. Ubiquitin specific protease 14 (trna-guanine transglycosylase) (USP14, Accession NP_005142.1) is another GAM7957 target gene, herein designated TARGET GENE. USP14 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by USP14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP14 BINDING SITE, designated SEQ ID:10433, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58462] Another function of GAM7957 is therefore inhibition of Ubiquitin specific protease 14 (trna-guanine transglycosylase) (USP14, Accession NP_005142.1), a gene which is similar to ubiquitin-specific cysteine (thiol) proteases and tRNA-guanine transglycosylase. Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP14.

[58463] The function of USP14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1. Uronyl-2-sulfotransferase (UST, Accession NP_005706.1) is another GAM7957 target gene, herein designated TARGET GENE. UST BINDING SITE1 and UST BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by UST, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UST BINDING SITE1 and UST BINDING SITE2, designated SEQ ID:19210 and SEQ ID:11817 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58464] Another function of GAM7957 is therefore inhibition of Uronyl-2-sulfotransferase (UST, Accession NP_005706.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UST.

[58465] Vitamin d (1,25- dihydroxyvitamin d3) receptor (VDR, Ac-

cession NP_000367.1) is another GAM7957 target gene, herein designated TARGET GENE. VDR BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VDR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VDR BINDING SITE, designated SEQ ID:15223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58466] Another function of GAM7957 is therefore inhibition of Vitamin d (1,25- dihydroxyvitamin d3) receptor (VDR, Accession NP_000367.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VDR.

[58467] Vascular endothelial growth factor (VEGF, Accession NP_003367.3) is another GAM7957 target gene, herein designated TARGET GENE. VEGF BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by VEGF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VEGF BINDING SITE, designated

SEQ ID:13604, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58468] Another function of GAM7957 is therefore inhibition of Vascular endothelial growth factor (VEGF, Accession NP_003367.3), a gene which induces endothelial cell proliferation and vascular permeability and therefore may be associated with Tumors. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Tumors, and of other diseases and clinical conditions associated with VEGF.

[58469] The function of VEGF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM500.1. Von hippel-lindau syndrome (VHL, Accession NP_000542.1) is another GAM7957 target gene, herein designated TARGET GENE. VHL BINDING SITE1 through VHL BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by VHL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VHL BINDING SITE1 through VHL BINDING SITE3, desig-

nated SEQ ID:19054, SEQ ID:5896 and SEQ ID:17264 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58470] Another function of GAM7957 is therefore inhibition of Von hippel–lindau syndrome (VHL, Accession NP_000542.1), a gene which may control rna stability through the selective degradation of rna– bound proteins. and therefore is associated with Von hippel– lindau disease. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Von hippel– lindau disease, and of other diseases and clinical conditions associated with VHL.

[58471] The function of VHL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.VIK (Accession NP_612503.1) is another GAM7957 target gene, herein designated TARGET GENE. VIK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by VIK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIK BINDING SITE, designated SEQ

ID:18691, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58472] Another function of GAM7957 is therefore inhibition of VIK (Accession NP_612503.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIK.

[58473] VIPL (Accession NP_110432.1) is another GAM7957 target gene, herein designated TARGET GENE. VIPL BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VIPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIPL BINDING SITE, designated SEQ ID:19197, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58474] Another function of GAM7957 is therefore inhibition of VIPL (Accession NP_110432.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIPL.

[58475] VprBP (Accession NP_055518.1) is another GAM7957 target gene, herein designated TARGET GENE. VprBP BINDING SITE is a target binding site found in the 3' untranslated

region of mRNA encoded by VprBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VprBP BINDING SITE, designated SEQ ID:5044, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58476] Another function of GAM7957 is therefore inhibition of VprBP (Accession NP_055518.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VprBP.

[58477] Vacuolar protein sorting 4b (yeast) (VPS4B, Accession NP_004860.2) is another GAM7957 target gene, herein designated TARGET GENE. VPS4B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VPS4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VPS4B BINDING SITE, designated SEQ ID:10439, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58478] Another function of GAM7957 is therefore inhibition of

Vacuolar protein sorting 4b (yeast) (VPS4B, Accession NP_004860.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS4B.

[58479] Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_114381.1) is another GAM7957 target gene, herein designated TARGET GENE. WBSCR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WBSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR1 BINDING SITE, designated SEQ ID:8562, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58480] Another function of GAM7957 is therefore inhibition of Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_114381.1), a gene which stimulates protein translation and therefore may be associated with Williams syndrome. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Williams syndrome, and of other diseases and clinical conditions

associated with WBSCR1.

[58481] The function of WBSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_071496.1) is another GAM7957 target gene, herein designated TARGET GENE. WBSCR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WBSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR1 BINDING SITE, designated SEQ ID:8562, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58482] Another function of GAM7957 is therefore inhibition of Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_071496.1), a gene which stimulates protein translation and therefore may be associated with Williams syndrome. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of Williams syndrome, and of other diseases and clinical conditions

associated with WBSCR1.

[58483] The function of WBSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_112585.2) is another GAM7957 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:15303, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58484] Another function of GAM7957 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_112585.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR21.

[58485] Williams beuren syndrome chromosome region 21

(WBSCR21, Accession NP_683710.1) is another GAM7957 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:15303, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58486] Another function of GAM7957 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683710.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR21.

[58487] Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683711.1) is another GAM7957 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:15303, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58488] Another function of GAM7957 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683711.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR21.

[58489] Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683713.1) is another GAM7957 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:15303, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ

ID:297.

[58490] Another function of GAM7957 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683713.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WB-SCR21.

[58491] Williams-beuren syndrome chromosome region 23 (WBSCR23, Accession NP_079318.1) is another GAM7957 target gene, herein designated TARGET GENE. WBSCR23 BINDING SITE1 and WBSCR23 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by WBSCR23, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR23 BINDING SITE1 and WB-SCR23 BINDING SITE2, designated SEQ ID:19838 and SEQ ID:14797 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58492] Another function of GAM7957 is therefore inhibition of Williams-beuren syndrome chromosome region 23 (WBSCR23, Accession NP_079318.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WB-SCR23.

[58493] WDR23 (Accession NP_079506.3) is another GAM7957 target gene, herein designated TARGET GENE. WDR23 BINDING SITE1 and WDR23 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by WDR23, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR23 BINDING SITE1 and WDR23 BINDING SITE2, designated SEQ ID:14277 and SEQ ID:14277 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58494] Another function of GAM7957 is therefore inhibition of WDR23 (Accession NP_079506.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR23.

[58495] WDR23 (Accession NP_079506.3) is another GAM7957 target gene, herein designated TARGET GENE. WDR23 BINDING SITE1 and WDR23 BINDING SITE2 are target binding sites found in untranslated regions of multiple tran-

scripts of mRNA encoded by WDR23, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR23 BINDING SITE1 and WDR23 BINDING SITE2, designated SEQ ID:10486 and SEQ ID:10486 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58496] Another function of GAM7957 is therefore inhibition of WDR23 (Accession NP_079506.3) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR23.

[58497] WIG1 (Accession NP_689426.1) is another GAM7957 target gene, herein designated TARGET GENE. WIG1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WIG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WIG1 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58498] Another function of GAM7957 is therefore inhibition of

WIG1 (Accession NP_689426.1), a gene which is a sensor of cellular stress conditions including oncogenic activation, DNA damage and hypoxia. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WIG1.

[58499] The function of WIG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2. WIG1 (Accession NP_071915.1) is another GAM7957 target gene, herein designated TARGET GENE. WIG1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WIG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WIG1 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58500] Another function of GAM7957 is therefore inhibition of WIG1 (Accession NP_071915.1), a gene which is a sensor of cellular stress conditions including oncogenic activation, DNA damage and hypoxia. Accordingly, utilities of

GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WIG1.

[58501] The function of WIG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2. Wingless-type mmtv integration site family, member 7b (WNT7B, Accession NP_478679.1) is another GAM7957 target gene, herein designated TARGET GENE. WNT7B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WNT7B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WNT7B BINDING SITE, designated SEQ ID:1621, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58502] Another function of GAM7957 is therefore inhibition of Wingless-type mmtv integration site family, member 7b (WNT7B, Accession NP_478679.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WNT7B.

[58503] Wingless-type mmtv integration site family, member 8b (WNT8B, Accession NP_003384.1) is another GAM7957

target gene, herein designated TARGET GENE. WNT8B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by WNT8B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WNT8B BINDING SITE, designated SEQ ID:3133, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58504] Another function of GAM7957 is therefore inhibition of Wingless-type mmtv integration site family, member 8b (WNT8B, Accession NP_003384.1), a gene which is the ligand for members of the frizzled family of seven transmembrane receptors and may play an important role in the development and differentiation of certain forebrain structures. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WNT8B.

[58505] The function of WNT8B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession

NP_005422.1) is another GAM7957 target gene, herein designated TARGET GENE. XRCC2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by XRCC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of XRCC2 BINDING SITE, designated SEQ ID:15223, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58506] Another function of GAM7957 is therefore inhibition of X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1), a gene which involves in the homologous recombination repair (hrr) pathway of double-stranded dna. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC2.

[58507] The function of XRCC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.YEA (Accession NP_116215.1) is another GAM7957 target gene, herein designated TARGET GENE.

YEA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by YEA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YEA BINDING SITE, designated SEQ ID:7319, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58508] Another function of GAM7957 is therefore inhibition of YEA (Accession NP_116215.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YEA.

[58509] Yme1-like 1 (*s. cerevisiae*) (YME1L1, Accession NP_055078.1) is another GAM7957 target gene, herein designated TARGET GENE. YME1L1 BINDING SITE1 and YME1L1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by YME1L1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YME1L1 BINDING SITE1 and YME1L1 BINDING SITE2, designated SEQ ID:9763 and SEQ ID:9763 respectively, to the nucleotide sequence of

GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58510] Another function of GAM7957 is therefore inhibition of Yme1-like 1 (*s. cerevisiae*) (YME1L1, Accession NP_055078.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YME1L1.

[58511] Yme1-like 1 (*s. cerevisiae*) (YME1L1, Accession NP_055078.1) is another GAM7957 target gene, herein designated TARGET GENE. YME1L1 BINDING SITE1 and YME1L1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by YME1L1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YME1L1 BINDING SITE1 and YME1L1 BINDING SITE2, designated SEQ ID:18286 and SEQ ID:18286 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58512] Another function of GAM7957 is therefore inhibition of Yme1-like 1 (*s. cerevisiae*) (YME1L1, Accession NP_055078.1) . Accordingly, utilities of GAM7957 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with YME1L1.

[58513] ZADH1 (Accession NP_689657.1) is another GAM7957 target gene, herein designated TARGET GENE. ZADH1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZADH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZADH1 BINDING SITE, designated SEQ ID:9120, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58514] Another function of GAM7957 is therefore inhibition of ZADH1 (Accession NP_689657.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZADH1.

[58515] ZAK (Accession NP_598407.1) is another GAM7957 target gene, herein designated TARGET GENE. ZAK BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ZAK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of ZAK BINDING SITE, designated SEQ ID:13065, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58516] Another function of GAM7957 is therefore inhibition of ZAK (Accession NP_598407.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAK.

[58517] ZBTB2 (Accession NP_065912.1) is another GAM7957 target gene, herein designated TARGET GENE. ZBTB2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ZBTB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZBTB2 BINDING SITE, designated SEQ ID:15154, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58518] Another function of GAM7957 is therefore inhibition of ZBTB2 (Accession NP_065912.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZBTB2.

[58519] ZFD25 (Accession NP_057304.1) is another GAM7957 target gene, herein designated TARGET GENE. ZFD25 BIND-

ING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZFD25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFD25 BINDING SITE, designated SEQ ID:19287, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58520] Another function of GAM7957 is therefore inhibition of ZFD25 (Accession NP_057304.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFD25.

[58521] ZFP106 (Accession NP_071918.1) is another GAM7957 target gene, herein designated TARGET GENE. ZFP106 BINDING SITE1 and ZFP106 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZFP106, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP106 BINDING SITE1 and ZFP106 BINDING SITE2, designated SEQ ID:13058 and SEQ ID:17808 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[58522] Another function of GAM7957 is therefore inhibition of ZFP106 (Accession NP_071918.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP106.

[58523] ZFP30 (Accession NP_055713.1) is another GAM7957 target gene, herein designated TARGET GENE. ZFP30 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZFP30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP30 BINDING SITE, designated SEQ ID:14388, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58524] Another function of GAM7957 is therefore inhibition of ZFP30 (Accession NP_055713.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP30.

[58525] Zinc finger protein 91 homolog (mouse) (ZFP91, Accession NP_444251.1) is another GAM7957 target gene, herein designated TARGET GENE. ZFP91 BINDING SITE is a target binding site found in the 3' untranslated region of multi-

ple transcripts of mRNA encoded by ZFP91, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP91 BINDING SITE, designated SEQ ID:883, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58526] Another function of GAM7957 is therefore inhibition of Zinc finger protein 91 homolog (mouse) (ZFP91, Accession NP_444251.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP91.

[58527] Zinc finger, imprinted 3 (ZIM3, Accession NP_443114.1) is another GAM7957 target gene, herein designated TARGET GENE. ZIM3 BINDING SITE1 and ZIM3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZIM3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZIM3 BINDING SITE1 and ZIM3 BINDING SITE2, designated SEQ ID:19880 and SEQ ID:10267 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also design-

nated SEQ ID:297.

[58528] Another function of GAM7957 is therefore inhibition of Zinc finger, imprinted 3 (ZIM3, Accession NP_443114.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZIM3.

[58529] Zinc finger protein 11b (kox 2) (ZNF11B, Accession NP_008886.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF11B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF11B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF11B BINDING SITE, designated SEQ ID:15224, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58530] Another function of GAM7957 is therefore inhibition of Zinc finger protein 11b (kox 2) (ZNF11B, Accession NP_008886.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF11B.

[58531] Zinc finger protein 14 (kox 6) (ZNF14, Accession

NP_066358.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF14 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF14 BINDING SITE, designated SEQ ID:5303, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58532] Another function of GAM7957 is therefore inhibition of Zinc finger protein 14 (kox 6) (ZNF14, Accession NP_066358.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF14.

[58533] Zinc finger protein 197 (ZNF197, Accession NP_008922.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF197 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF197 BINDING SITE, designated

SEQ ID:2173, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58534] Another function of GAM7957 is therefore inhibition of Zinc finger protein 197 (ZNF197, Accession NP_008922.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF197.

[58535] Zinc finger protein 264 (ZNF264, Accession NP_003408.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF264 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF264 BINDING SITE, designated SEQ ID:2367, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58536] Another function of GAM7957 is therefore inhibition of Zinc finger protein 264 (ZNF264, Accession NP_003408.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with ZNF264.

[58537] Zinc finger protein 271 (ZNF271, Accession NP_006620.2) is another GAM7957 target gene, herein designated TARGET GENE. ZNF271 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF271 BINDING SITE, designated SEQ ID:13091, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58538] Another function of GAM7957 is therefore inhibition of Zinc finger protein 271 (ZNF271, Accession NP_006620.2). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF271.

[58539] Zinc finger protein 297b (ZNF297B, Accession NP_054726.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF297B BINDING SITE1 and ZNF297B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZNF297B, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF297B BINDING SITE1 and ZNF297B BINDING SITE2, designated SEQ ID:3235 and SEQ ID:15000 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58540] Another function of GAM7957 is therefore inhibition of Zinc finger protein 297b (ZNF297B, Accession NP_054726.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF297B.

[58541] ZNF333 (Accession NP_115809.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF333 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF333, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF333 BINDING SITE, designated SEQ ID:12792, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58542] Another function of GAM7957 is therefore inhibition of ZNF333 (Accession NP_115809.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF333.

[58543] Zinc finger protein 339 (ZNF339, Accession NP_067043.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF339 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF339, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF339 BINDING SITE, designated SEQ ID:2484, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58544] Another function of GAM7957 is therefore inhibition of Zinc finger protein 339 (ZNF339, Accession NP_067043.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF339.

[58545] Zinc finger protein 33a (kox 31) (ZNF33A, Accession NP_008905.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF33A BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by ZNF33A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF33A BINDING SITE, designated SEQ ID:19246, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58546] Another function of GAM7957 is therefore inhibition of Zinc finger protein 33a (kox 31) (ZNF33A, Accession NP_008905.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF33A.

[58547] Zinc finger protein 347 (ZNF347, Accession NP_115973.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF347 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF347, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF347 BINDING SITE, designated SEQ ID:9422, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58548] Another function of GAM7957 is therefore inhibition of Zinc finger protein 347 (ZNF347, Accession NP_115973.1). Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF347.

[58549] Zinc finger protein 36 (kox 18) (ZNF36, Accession XP_168302.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF36 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF36, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF36 BINDING SITE, designated SEQ ID:10435, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58550] Another function of GAM7957 is therefore inhibition of Zinc finger protein 36 (kox 18) (ZNF36, Accession XP_168302.1), a gene which may be involved in transcriptional regulation. Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF36.

[58551] The function of ZNF36 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.1.ZNF409 (Accession NP_055709.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF409 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF409, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF409 BINDING SITE, designated SEQ ID:15207, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58552] Another function of GAM7957 is therefore inhibition of ZNF409 (Accession NP_055709.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF409.

[58553] ZNF426 (Accession NP_077011.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF426 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF426, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of ZNF426 BINDING SITE, designated SEQ ID:9759, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58554] Another function of GAM7957 is therefore inhibition of ZNF426 (Accession NP_077011.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF426.

[58555] ZNF430 (Accession NP_079465.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF430 BINDING SITE1 and ZNF430 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZNF430, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF430 BINDING SITE1 and ZNF430 BINDING SITE2, designated SEQ ID:10917 and SEQ ID:15089 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58556] Another function of GAM7957 is therefore inhibition of ZNF430 (Accession NP_079465.1) . Accordingly, utilities

of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF430.

[58557] ZNF431 (Accession XP_086098.2) is another GAM7957 target gene, herein designated TARGET GENE. ZNF431 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF431, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF431 BINDING SITE, designated SEQ ID:7868, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58558] Another function of GAM7957 is therefore inhibition of ZNF431 (Accession XP_086098.2) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF431.

[58559] ZNF432 (Accession NP_055465.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF432 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of ZNF432 BINDING SITE, designated SEQ ID:5251, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58560] Another function of GAM7957 is therefore inhibition of ZNF432 (Accession NP_055465.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF432.

[58561] ZNF440 (Accession NP_689570.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF440 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF440 BINDING SITE, designated SEQ ID:14055, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58562] Another function of GAM7957 is therefore inhibition of ZNF440 (Accession NP_689570.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

ZNF440.

[58563] ZNF444 (Accession NP_060807.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF444 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF444, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF444 BINDING SITE, designated SEQ ID:7772, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58564] Another function of GAM7957 is therefore inhibition of ZNF444 (Accession NP_060807.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF444.

[58565] ZNF450 (Accession NP_055612.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF450 BINDING SITE1 and ZNF450 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZNF450, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of ZNF450 BINDING SITE1 and ZNF450 BINDING SITE2, designated SEQ ID:6071 and SEQ ID:10867 respectively, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58566] Another function of GAM7957 is therefore inhibition of ZNF450 (Accession NP_055612.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF450.

[58567] Zinc finger protein 74 (cos52) (ZNF74, Accession NP_003417.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF74 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF74, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF74 BINDING SITE, designated SEQ ID:12062, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58568] Another function of GAM7957 is therefore inhibition of Zinc finger protein 74 (cos52) (ZNF74, Accession

NP_003417.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF74.

[58569] Zinc finger protein 91 (hpf7, htf10) (ZNF91, Accession NP_003421.1) is another GAM7957 target gene, herein designated TARGET GENE. ZNF91 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF91, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF91 BINDING SITE, designated SEQ ID:15343, to the nucleotide sequence of GAM7957 RNA, herein designated GAM RNA, also designated SEQ ID:297.

[58570] Another function of GAM7957 is therefore inhibition of Zinc finger protein 91 (hpf7, htf10) (ZNF91, Accession NP_003421.1) . Accordingly, utilities of GAM7957 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF91.

[58571]

[58572] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 8145

(GAM8145), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[58573] GAM8145 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM8145 was detected is described hereinabove with reference to Figs. 8–15.

[58574] GAM8145 gene, herein designated GAM GENE, and GAM8145 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[58575] GAM8145 gene encodes a GAM8145 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM8145 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM8145 precursor RNA is designated SEQ ID:112, and is provided hereinbelow with reference to the sequence listing part.

[58576] GAM8145 precursor RNA folds onto itself, forming GAM8145 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA

genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[58577] GAM8145 precursor RNA folds onto itself, forming GAM8145 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[58578] Nucleotide sequence of GAM8145 precursor RNA, designated SEQ-ID: 112, and a schematic representation of a predicted secondary folding of GAM8145 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[58579] An enzyme complex designated DICER COMPLEX, `dices` the GAM8145 folded precursor RNA into GAM8145 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short

~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM8145 RNA is designated SEQ ID:328, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[58580] GAM8145 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM8145 target RNA, herein designated GAM TARGET RNA. GAM8145 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5' untranslated region, a protein coding region and a 3' untranslated region, designated 5'UTR, PROTEIN CODING and 3'UTR respectively.

[58581] GAM8145 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM8145 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM8145 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING

SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting. GAM8145 RNA may have a different number of target binding sites in untranslated regions of a GAM8145 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3'UTR region, this is meant as an example only; these target binding sites may be located in the 3'UTR region, the 5'UTR region, or in both 3'UTR and 5'UTR regions.

[58582] The complementary binding of GAM8145 RNA, herein designated GAM RNA, to target binding sites on GAM8145 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM8145 target RNA into GAM8145 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[58583] It is appreciated that GAM8145 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM8145 target genes. The mRNA of each one of this plurality of GAM8145 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM8145 RNA,

herein designated GAM RNA, and which when bound by GAM8145 RNA causes inhibition of translation of respective one or more GAM8145 target proteins.

[58584] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM8145 gene, herein designated GAM GENE, on one or more GAM8145 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[58585] It is appreciated that specific functions and accordingly utilities of GAM8145 correlate with, and may be deduced from, the identity of the target genes which GAM8145 binds and inhibits, and the function of these target genes,

as elaborated hereinbelow.

[58586]

[58587]

[58588] (Accession NP_061085.1) is a GAM8145 target gene, herein designated TARGET GENE. BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BINDING SITE, designated SEQ ID:1692, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58589] A function of GAM8145 is therefore inhibition of (Accession NP_061085.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with .

[58590] Adrenergic, alpha-2a-, receptor (ADRA2A, Accession NP_000672.2) is another GAM8145 target gene, herein designated TARGET GENE. ADRA2A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ADRA2A, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADRA2A BINDING SITE, designated SEQ ID:4823, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58591] Another function of GAM8145 is therefore inhibition of Adrenergic, alpha-2a-, receptor (ADRA2A, Accession NP_000672.2), a gene which mediates the effects of epinephrine and norepinephrine. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADRA2A.

[58592] The function of ADRA2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM450.2. Adrenergic, beta-1-, receptor (ADRB1, Accession NP_000675.1) is another GAM8145 target gene, herein designated TARGET GENE. ADRB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ADRB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADRB1 BINDING

SITE, designated SEQ ID:10737, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58593] Another function of GAM8145 is therefore inhibition of Adrenergic, beta-1-, receptor (ADRB1, Accession NP_000675.1), a gene which stimulates adenylyl cyclase activity and mediates catecholamine function. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADRB1.

[58594] The function of ADRB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1045.1. Arylsulfatase b (ARSB, Accession NP_000037.1) is another GAM8145 target gene, herein designated TARGET GENE. ARSB BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ARSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARSB BINDING SITE, designated SEQ ID:9103, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ

ID:328.

[58595] Another function of GAM8145 is therefore inhibition of Arylsulfatase b (ARSB, Accession NP_000037.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARSB.

[58596] Atpase, h⁺ transporting, lysosomal interacting protein 2 (ATP6IP2, Accession NP_005756.2) is another GAM8145 target gene, herein designated TARGET GENE. ATP6IP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ATP6IP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP6IP2 BINDING SITE, designated SEQ ID:7285, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58597] Another function of GAM8145 is therefore inhibition of Atpase, h⁺ transporting, lysosomal interacting protein 2 (ATP6IP2, Accession NP_005756.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6IP2.

[58598] BSPRY (Accession NP_060158.1) is another GAM8145 target gene, herein designated TARGET GENE. BSPRY BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BSPRY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BSPRY BINDING SITE, designated SEQ ID:5340, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58599] Another function of GAM8145 is therefore inhibition of BSPRY (Accession NP_060158.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BSPRY.

[58600] Chromosome 1 open reading frame 1 (C1orf1, Accession NP_001204.1) is another GAM8145 target gene, herein designated TARGET GENE. C1orf1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C1orf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf1 BINDING SITE, designated SEQ ID:14716, to the nucleotide sequence of GAM8145

RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58601] Another function of GAM8145 is therefore inhibition of Chromosome 1 open reading frame 1 (C1orf1, Accession NP_001204.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf1.

[58602] Chromosome 1 open reading frame 22 (C1orf22, Accession NP_079467.2) is another GAM8145 target gene, herein designated TARGET GENE. C1orf22 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C1orf22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf22 BINDING SITE, designated SEQ ID:10321, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58603] Another function of GAM8145 is therefore inhibition of Chromosome 1 open reading frame 22 (C1orf22, Accession NP_079467.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf22.

[58604] C1QDC1 (Accession NP_076414.2) is another GAM8145 target gene, herein designated TARGET GENE. C1QDC1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by C1QDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1QDC1 BINDING SITE, designated SEQ ID:11118, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58605] Another function of GAM8145 is therefore inhibition of C1QDC1 (Accession NP_076414.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QDC1.

[58606] C1QDC1 (Accession NP_115532.1) is another GAM8145 target gene, herein designated TARGET GENE. C1QDC1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by C1QDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of C1QDC1 BINDING SITE, designated SEQ ID:11118, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58607] Another function of GAM8145 is therefore inhibition of C1QDC1 (Accession NP_115532.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QDC1.

[58608] Chromosome 20 open reading frame 72 (C20orf72, Accession NP_443097.1) is another GAM8145 target gene, herein designated TARGET GENE. C20orf72 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C20orf72, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf72 BINDING SITE, designated SEQ ID:3280, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58609] Another function of GAM8145 is therefore inhibition of Chromosome 20 open reading frame 72 (C20orf72, Accession NP_443097.1) . Accordingly, utilities of GAM8145

include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf72.

[58610] C6orf5 (Accession NP_056339.2) is another GAM8145 target gene, herein designated TARGET GENE. C6orf5 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf5 BINDING SITE, designated SEQ ID:4879, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58611] Another function of GAM8145 is therefore inhibition of C6orf5 (Accession NP_056339.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf5.

[58612] Chaperone, abc1 activity of bc1 complex like (s. pombe) (CABC1, Accession NP_064632.1) is another GAM8145 target gene, herein designated TARGET GENE. CABC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CABC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of CABC1 BINDING SITE, designated SEQ ID:14186, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58613] Another function of GAM8145 is therefore inhibition of Chaperone, abc1 activity of bc1 complex like (s. pombe) (CABC1, Accession NP_064632.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CABC1.

[58614] Calcium channel, voltage-dependent, gamma subunit 3 (CACNG3, Accession NP_006530.1) is another GAM8145 target gene, herein designated TARGET GENE. CACNG3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CACNG3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNG3 BINDING SITE, designated SEQ ID:8825, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58615] Another function of GAM8145 is therefore inhibition of Calcium channel, voltage-dependent, gamma subunit 3 (CACNG3, Accession NP_006530.1), a gene which is

thought to stabilize the calcium channel in an inactivated state. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNG3.

[58616] The function of CACNG3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.1. Calpain 1, (mu/i) large subunit (CAPN1, Accession NP_005177.2) is another GAM8145 target gene, herein designated TARGET GENE. CAPN1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CAPN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAPN1 BINDING SITE, designated SEQ ID:3309, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58617] Another function of GAM8145 is therefore inhibition of Calpain 1, (mu/i) large subunit (CAPN1, Accession NP_005177.2), a gene which is an intracellular protease that requires calcium for its catalytic activity. Accordingly, utilities of GAM8145 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with CAPN1.

[58618] The function of CAPN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM41.1. Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116764.1) is another GAM8145 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:7205, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58619] Another function of GAM8145 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116764.1), a gene which involves in the activation cascade of caspases responsible

for apoptosis execution. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[58620] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_001215.1) is another GAM8145 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:7205, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58621] Another function of GAM8145 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_001215.1), a gene which

involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[58622] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116766.1) is another GAM8145 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:7205, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58623] Another function of GAM8145 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-reg-

ulated 2) (CASP2, Accession NP_116766.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[58624] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116765.1) is another GAM8145 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:7205, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58625] Another function of GAM8145 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural

precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116765.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[58626] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1. Cd151 antigen (CD151, Accession NP_004348.2) is another GAM8145 target gene, herein designated TARGET GENE. CD151 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CD151, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD151 BINDING SITE, designated SEQ ID:12932, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58627] Another function of GAM8145 is therefore inhibition of Cd151 antigen (CD151, Accession NP_004348.2). Accordingly, utilities of GAM8145 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with CD151.

[58628] CG012 (Accession XP_096710.1) is another GAM8145 target gene, herein designated TARGET GENE. CG012 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CG012, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CG012 BINDING SITE, designated SEQ ID:2753, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58629] Another function of GAM8145 is therefore inhibition of CG012 (Accession XP_096710.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CG012.

[58630] Chk1 checkpoint homolog (s. pombe) (CHEK1, Accession NP_001265.1) is another GAM8145 target gene, herein designated TARGET GENE. CHEK1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CHEK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of CHEK1 BINDING SITE, designated SEQ ID:15806, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58631] Another function of GAM8145 is therefore inhibition of Chk1 checkpoint homolog (*S. pombe*) (CHEK1, Accession NP_001265.1), a gene which a protein kinase that is required for the DNA damage checkpoint. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHEK1.

[58632] The function of CHEK1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3154.1. Cytochrome c oxidase subunit viii (COX8, Accession NP_004065.1) is another GAM8145 target gene, herein designated TARGET GENE. COX8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by COX8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COX8 BINDING SITE, designated SEQ ID:15358, to the nucleotide sequence of

GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58633] Another function of GAM8145 is therefore inhibition of Cytochrome c oxidase subunit viii (COX8, Accession NP_004065.1), a gene which is a nuclear- coded polypeptide chain of cytochrome c oxidase. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COX8.

[58634] The function of COX8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2154.1.DKFZp727A071 (Accession NP_689481.1) is another GAM8145 target gene, herein designated TARGET GENE. DKFZp727A071 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DKFZp727A071, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp727A071 BINDING SITE, designated SEQ ID:18597, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58635] Another function of GAM8145 is therefore inhibition of

DKFZp727A071 (Accession NP_689481.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp727A071.

[58636] Dystrophia myotonica-containing wd repeat motif (DMWD, Accession XP_027569.1) is another GAM8145 target gene, herein designated TARGET GENE. DMWD BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DMWD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMWD BINDING SITE, designated SEQ ID:17090, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58637] Another function of GAM8145 is therefore inhibition of Dystrophia myotonica-containing wd repeat motif (DMWD, Accession XP_027569.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMWD.

[58638] DPF3 (Accession NP_036206.1) is another GAM8145 target gene, herein designated TARGET GENE. DPF3 BINDING SITE is a target binding site found in the 3' untranslated

region of mRNA encoded by DPF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DPF3 BINDING SITE, designated SEQ ID:15298, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58639] Another function of GAM8145 is therefore inhibition of DPF3 (Accession NP_036206.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPF3.

[58640] Ells1 (Accession NP_690006.1) is another GAM8145 target gene, herein designated TARGET GENE. Ells1 BINDING SITE1 and Ells1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by Ells1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Ells1 BINDING SITE1 and Ells1 BINDING SITE2, designated SEQ ID:19837 and SEQ ID:18457 respectively, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58641] Another function of GAM8145 is therefore inhibition of

Ells1 (Accession NP_690006.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Ells1.

[58642] ERAP140 (Accession XP_059748.2) is another GAM8145 target gene, herein designated TARGET GENE. ERAP140 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ERAP140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERAP140 BINDING SITE, designated SEQ ID:7182, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58643] Another function of GAM8145 is therefore inhibition of ERAP140 (Accession XP_059748.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERAP140.

[58644] F-box only protein 11 (FBXO11, Accession NP_061163.2) is another GAM8145 target gene, herein designated TARGET GENE. FBXO11 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by FBXO11, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO11 BINDING SITE, designated SEQ ID:11365, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58645] Another function of GAM8145 is therefore inhibition of F-box only protein 11 (FBXO11, Accession NP_061163.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO11.

[58646] FLJ10460 (Accession NP_060567.1) is another GAM8145 target gene, herein designated TARGET GENE. FLJ10460 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ10460, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10460 BINDING SITE, designated SEQ ID:455, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58647] Another function of GAM8145 is therefore inhibition of FLJ10460 (Accession NP_060567.1) . Accordingly, utilities

of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10460.

[58648] FLJ11274 (Accession NP_060845.1) is another GAM8145 target gene, herein designated TARGET GENE. FLJ11274 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ11274, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11274 BINDING SITE, designated SEQ ID:13401, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58649] Another function of GAM8145 is therefore inhibition of FLJ11274 (Accession NP_060845.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11274.

[58650] FLJ20671 (Accession NP_060394.1) is another GAM8145 target gene, herein designated TARGET GENE. FLJ20671 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ20671, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20671 BINDING SITE, designated SEQ ID:11719, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58651] Another function of GAM8145 is therefore inhibition of FLJ20671 (Accession NP_060394.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20671.

[58652] FLJ23584 (Accession NP_078864.1) is another GAM8145 target gene, herein designated TARGET GENE. FLJ23584 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ23584, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23584 BINDING SITE, designated SEQ ID:14763, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58653] Another function of GAM8145 is therefore inhibition of FLJ23584 (Accession NP_078864.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ23584.

[58654] FLJ31882 (Accession NP_689673.1) is another GAM8145 target gene, herein designated TARGET GENE. FLJ31882 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31882, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31882 BINDING SITE, designated SEQ ID:3175, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58655] Another function of GAM8145 is therefore inhibition of FLJ31882 (Accession NP_689673.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31882.

[58656] FLJ31952 (Accession NP_653283.1) is another GAM8145 target gene, herein designated TARGET GENE. FLJ31952 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ31952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ31952 BINDING SITE, designated SEQ ID:15807, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58657] Another function of GAM8145 is therefore inhibition of FLJ31952 (Accession NP_653283.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31952.

[58658] FLJ33996 (Accession NP_787090.1) is another GAM8145 target gene, herein designated TARGET GENE. FLJ33996 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FLJ33996, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33996 BINDING SITE, designated SEQ ID:10522, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58659] Another function of GAM8145 is therefore inhibition of FLJ33996 (Accession NP_787090.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ33996.

[58660] Forkhead box I2 (FOXL2, Accession NP_075555.1) is another GAM8145 target gene, herein designated TARGET GENE. FOXL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FOXL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXL2 BINDING SITE, designated SEQ ID:2486, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58661] Another function of GAM8145 is therefore inhibition of Forkhead box I2 (FOXL2, Accession NP_075555.1). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXL2.

[58662] Fucosyltransferase 10 (alpha (1,3) fucosyltransferase) (FUT10, Accession NP_116053.2) is another GAM8145 target gene, herein designated TARGET GENE. FUT10 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by FUT10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FUT10 BINDING SITE, designated SEQ ID:3533, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58663] Another function of GAM8145 is therefore inhibition of Fucosyltransferase 10 (alpha (1,3) fucosyltransferase) (FUT10, Accession NP_116053.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT10.

[58664] GALNT13 (Accession XP_054951.3) is another GAM8145 target gene, herein designated TARGET GENE. GALNT13 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GALNT13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNT13 BINDING SITE, designated SEQ ID:16038, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58665] Another function of GAM8145 is therefore inhibition of GALNT13 (Accession XP_054951.3) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

GALNT13.

[58666] Glucosaminyl (n-acetyl) transferase 2, i-branching enzyme (GCNT2, Accession NP_001482.1) is another GAM8145 target gene, herein designated TARGET GENE. GCNT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GCNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GCNT2 BINDING SITE, designated SEQ ID:12041, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58667] Another function of GAM8145 is therefore inhibition of Glucosaminyl (n-acetyl) transferase 2, i-branching enzyme (GCNT2, Accession NP_001482.1), a gene which converts linear into branched poly- n- acetyllactosamino- glycans. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GCNT2.

[58668] The function of GCNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM205.2.Glucosaminyl (n-acetyl) transferase 2, i-branching enzyme (GCNT2, Accession NP_663624.1) is another GAM8145 target gene, herein designated TARGET GENE. GCNT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GCNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GCNT2 BINDING SITE, designated SEQ ID:12041, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58669] Another function of GAM8145 is therefore inhibition of Glucosaminyl (n-acetyl) transferase 2, i-branching enzyme (GCNT2, Accession NP_663624.1), a gene which converts linear into branched poly- n- acetyllactosaminoglycans. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GCNT2.

[58670] The function of GCNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.2.Glucosaminyl (n-acetyl) transferase 2, i-

branching enzyme (GCNT2, Accession NP_663630.1) is another GAM8145 target gene, herein designated TARGET GENE. GCNT2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by GCNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GCNT2 BINDING SITE, designated SEQ ID:12041, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58671] Another function of GAM8145 is therefore inhibition of Glucosaminyl (n-acetyl) transferase 2, i-branching enzyme (GCNT2, Accession NP_663630.1), a gene which converts linear into branched poly- n- acetyllactosaminoglycans. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GCNT2.

[58672] The function of GCNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.2. Glycosylphosphatidylinositol specific phospholipase d1 (GPLD1, Accession NP_803436.1) is another

GAM8145 target gene, herein designated TARGET GENE. GPLD1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GPLD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPLD1 BINDING SITE, designated SEQ ID:1243, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58673] Another function of GAM8145 is therefore inhibition of Glycosylphosphatidylinositol specific phospholipase d1 (GPLD1, Accession NP_803436.1), a gene which hydrolyses the inositol phosphate linkage in proteins anchored by phosphatidylinositol glycans to release these proteins from the membrane. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPLD1.

[58674] The function of GPLD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1. Glycosylphosphatidylinositol specific phospholipase d1 (GPLD1, Accession NP_001494.2) is another

GAM8145 target gene, herein designated TARGET GENE. GPLD1 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by GPLD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPLD1 BINDING SITE, designated SEQ ID:1243, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58675] Another function of GAM8145 is therefore inhibition of Glycosylphosphatidylinositol specific phospholipase d1 (GPLD1, Accession NP_001494.2), a gene which hydrolyses the inositol phosphate linkage in proteins anchored by phosphatidylinositol glycans to release these proteins from the membrane. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPLD1.

[58676] The function of GPLD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.G protein-coupled receptor 30 (GPR30, Accession NP_001496.1) is another GAM8145 target gene,

herein designated TARGET GENE. GPR30 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by GPR30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR30 BINDING SITE, designated SEQ ID:7529, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58677] Another function of GAM8145 is therefore inhibition of G protein-coupled receptor 30 (GPR30, Accession NP_001496.1), a gene which receives chemical signals in cell communication in both CNS and peripheral tissues. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR30.

[58678] The function of GPR30 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM475.2.G protein-coupled receptor 55 (GPR55, Accession NP_005674.1) is another GAM8145 target gene, herein designated TARGET GENE. GPR55 BINDING SITE is a target binding site found in the 3' untranslated region of

mRNA encoded by GPR55, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR55 BINDING SITE, designated SEQ ID:8432, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58679] Another function of GAM8145 is therefore inhibition of G protein-coupled receptor 55 (GPR55, Accession NP_005674.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR55.

[58680] General transcription factor iif, polypeptide 1, 74kda (GTF2F1, Accession NP_002087.1) is another GAM8145 target gene, herein designated TARGET GENE. GTF2F1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by GTF2F1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2F1 BINDING SITE, designated SEQ ID:8940, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58681] Another function of GAM8145 is therefore inhibition of General transcription factor iif, polypeptide 1, 74kda (GTF2F1, Accession NP_002087.1), a gene which helps to recruit it to the initiation complex in collaboration with tfiib. it promotes transcription elongation. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2F1.

[58682] The function of GTF2F1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Hypermethylated in cancer 2 (HIC2, Accession XP_036937.2) is another GAM8145 target gene, herein designated TARGET GENE. HIC2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HIC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC2 BINDING SITE, designated SEQ ID:18759, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58683] Another function of GAM8145 is therefore inhibition of

Hypermethylated in cancer 2 (HIC2, Accession XP_036937.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC2.

[58684] Hypermethylated in cancer 2 (HIC2, Accession NP_055909.1) is another GAM8145 target gene, herein designated TARGET GENE. HIC2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by HIC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC2 BINDING SITE, designated SEQ ID:18759, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58685] Another function of GAM8145 is therefore inhibition of Hypermethylated in cancer 2 (HIC2, Accession NP_055909.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC2.

[58686] Heparanase (HPSE, Accession NP_006656.1) is another GAM8145 target gene, herein designated TARGET GENE. HPSE BINDING SITE is a target binding site found in the 3'

untranslated region of mRNA encoded by HPSE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HPSE BINDING SITE, designated SEQ ID:454, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58687] Another function of GAM8145 is therefore inhibition of Heparanase (HPSE, Accession NP_006656.1), a gene which is an endoglycosidase that cleaves heparan sulfate, and therefore may be associated with Breast cancer. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Breast cancer, and of other diseases and clinical conditions associated with HPSE.

[58688] The function of HPSE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.HSPC009 (Accession NP_054738.1) is another GAM8145 target gene, herein designated TARGET GENE. HSPC009 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by HSPC009, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of HSPC009 BINDING SITE, designated SEQ ID:6013, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58689] Another function of GAM8145 is therefore inhibition of HSPC009 (Accession NP_054738.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC009.

[58690] KIAA0265 (Accession XP_045954.2) is another GAM8145 target gene, herein designated TARGET GENE. KIAA0265 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0265, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0265 BINDING SITE, designated SEQ ID:16213, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58691] Another function of GAM8145 is therefore inhibition of KIAA0265 (Accession XP_045954.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0265.

[58692] KIAA0354 (Accession NP_055687.1) is another GAM8145 target gene, herein designated TARGET GENE. KIAA0354 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0354, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0354 BINDING SITE, designated SEQ ID:18748, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58693] Another function of GAM8145 is therefore inhibition of KIAA0354 (Accession NP_055687.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0354.

[58694] KIAA0564 (Accession XP_038664.6) is another GAM8145 target gene, herein designated TARGET GENE. KIAA0564 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0564, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA0564 BINDING SITE, designated SEQ ID:16594, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58695] Another function of GAM8145 is therefore inhibition of KIAA0564 (Accession XP_038664.6) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0564.

[58696] KIAA0570 (Accession XP_291018.1) is another GAM8145 target gene, herein designated TARGET GENE. KIAA0570 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0570, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0570 BINDING SITE, designated SEQ ID:16814, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58697] Another function of GAM8145 is therefore inhibition of KIAA0570 (Accession XP_291018.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0570.

[58698] KIAA0795 (Accession NP_079286.1) is another GAM8145 target gene, herein designated TARGET GENE. KIAA0795 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0795, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0795 BINDING SITE, designated SEQ ID:8567, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58699] Another function of GAM8145 is therefore inhibition of KIAA0795 (Accession NP_079286.1). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0795.

[58700] KIAA0872 (Accession NP_055755.1) is another GAM8145 target gene, herein designated TARGET GENE. KIAA0872 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA0872, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0872 BINDING SITE, designated SEQ ID:3812, to the

nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58701] Another function of GAM8145 is therefore inhibition of KIAA0872 (Accession NP_055755.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0872.

[58702] KIAA1039 (Accession XP_085748.1) is another GAM8145 target gene, herein designated TARGET GENE. KIAA1039 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KIAA1039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1039 BINDING SITE, designated SEQ ID:14136, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58703] Another function of GAM8145 is therefore inhibition of KIAA1039 (Accession XP_085748.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1039.

[58704] KIAA1822 (Accession XP_041566.2) is another GAM8145

target gene, herein designated TARGET GENE. KIAA1822 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1822 BINDING SITE, designated SEQ ID:15750, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58705] Another function of GAM8145 is therefore inhibition of KIAA1822 (Accession XP_041566.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1822.

[58706] KIAA1841 (Accession XP_087056.4) is another GAM8145 target gene, herein designated TARGET GENE. KIAA1841 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1841 BINDING SITE, designated SEQ ID:5943, to the nucleotide sequence of GAM8145 RNA, herein designated

GAM RNA, also designated SEQ ID:328.

[58707] Another function of GAM8145 is therefore inhibition of KIAA1841 (Accession XP_087056.4) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1841.

[58708] KIAA1892 (Accession NP_056212.1) is another GAM8145 target gene, herein designated TARGET GENE. KIAA1892 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1892, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1892 BINDING SITE, designated SEQ ID:4184, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58709] Another function of GAM8145 is therefore inhibition of KIAA1892 (Accession NP_056212.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1892.

[58710] KIAA1981 (Accession XP_114000.1) is another GAM8145 target gene, herein designated TARGET GENE. KIAA1981

BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KIAA1981, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1981 BINDING SITE, designated SEQ ID:15733, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58711] Another function of GAM8145 is therefore inhibition of KIAA1981 (Accession XP_114000.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1981.

[58712] Kelch-like 8 (drosophila) (KLHL8, Accession NP_065854.1) is another GAM8145 target gene, herein designated TARGET GENE. KLHL8 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KLHL8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLHL8 BINDING SITE, designated SEQ ID:12192, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ

ID:328.

[58713] Another function of GAM8145 is therefore inhibition of Kelch-like 8 (drosophila) (KLHL8, Accession NP_065854.1). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLHL8.

[58714] Kininogen (KNG, Accession NP_000884.1) is another GAM8145 target gene, herein designated TARGET GENE. KNG BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by KNG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KNG BINDING SITE, designated SEQ ID:1846, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58715] Another function of GAM8145 is therefore inhibition of Kininogen (KNG, Accession NP_000884.1), a gene which plays an important role in blood coagulation by helping to position optimally prekallikrein and factor xi next to factor xii; are inhibitors of thiol proteases and therefore may be associated with Williams trait. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of

Williams trait, and of other diseases and clinical conditions associated with KNG.

[58716] The function of KNG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1394.1.KRTHBP2 (Accession XP_303553.1) is another GAM8145 target gene, herein designated TARGET GENE. KRTHBP2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by KRTHBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KRTHBP2 BINDING SITE, designated SEQ ID:11295, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58717] Another function of GAM8145 is therefore inhibition of KRTHBP2 (Accession XP_303553.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KRTHBP2.

[58718] LOC134492 (Accession NP_660309.1) is another GAM8145 target gene, herein designated TARGET GENE.

LOC134492 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC134492, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC134492 BINDING SITE, designated SEQ ID:8992, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58719] Another function of GAM8145 is therefore inhibition of LOC134492 (Accession NP_660309.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC134492.

[58720] LOC149149 (Accession XP_097598.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC149149 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC149149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149149 BINDING SITE, designated SEQ ID:12363, to the nucleotide sequence of

GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58721] Another function of GAM8145 is therefore inhibition of LOC149149 (Accession XP_097598.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149149.

[58722] LOC149351 (Accession XP_086503.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC149351 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC149351, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149351 BINDING SITE, designated SEQ ID:12288, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58723] Another function of GAM8145 is therefore inhibition of LOC149351 (Accession XP_086503.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149351.

[58724] LOC149670 (Accession XP_086647.4) is another GAM8145 target gene, herein designated TARGET GENE. LOC149670 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC149670, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149670 BINDING SITE, designated SEQ ID:20142, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58725] Another function of GAM8145 is therefore inhibition of LOC149670 (Accession XP_086647.4) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149670.

[58726] LOC150946 (Accession XP_097977.2) is another GAM8145 target gene, herein designated TARGET GENE. LOC150946 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC150946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC150946 BINDING SITE, designated SEQ ID:11545, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58727] Another function of GAM8145 is therefore inhibition of LOC150946 (Accession XP_097977.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150946.

[58728] LOC154062 (Accession XP_087842.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC154062 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC154062, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154062 BINDING SITE, designated SEQ ID:17934, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58729] Another function of GAM8145 is therefore inhibition of LOC154062 (Accession XP_087842.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC154062.

[58730] LOC158402 (Accession XP_098936.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC158402 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC158402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158402 BINDING SITE, designated SEQ ID:12592, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58731] Another function of GAM8145 is therefore inhibition of LOC158402 (Accession XP_098936.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158402.

[58732] LOC221405 (Accession XP_168138.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC221405 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC221405, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221405 BINDING SITE, designated SEQ ID:5393, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58733] Another function of GAM8145 is therefore inhibition of LOC221405 (Accession XP_168138.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221405.

[58734] LOC221710 (Accession XP_166471.2) is another GAM8145 target gene, herein designated TARGET GENE. LOC221710 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC221710, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221710 BINDING SITE, designated SEQ ID:17794, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58735] Another function of GAM8145 is therefore inhibition of

LOC221710 (Accession XP_166471.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221710.

[58736] LOC222225 (Accession XP_168633.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC222225 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC222225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222225 BINDING SITE, designated SEQ ID:10921, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58737] Another function of GAM8145 is therefore inhibition of LOC222225 (Accession XP_168633.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222225.

[58738] LOC253228 (Accession XP_171113.3) is another GAM8145 target gene, herein designated TARGET GENE. LOC253228 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC253228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253228 BINDING SITE, designated SEQ ID:4153, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58739] Another function of GAM8145 is therefore inhibition of LOC253228 (Accession XP_171113.3) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253228.

[58740] LOC254946 (Accession XP_171161.2) is another GAM8145 target gene, herein designated TARGET GENE. LOC254946 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC254946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254946 BINDING SITE, designated SEQ ID:18473, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also design-

nated SEQ ID:328.

[58741] Another function of GAM8145 is therefore inhibition of LOC254946 (Accession XP_171161.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254946.

[58742] LOC283167 (Accession XP_210921.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC283167 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283167 BINDING SITE, designated SEQ ID:9794, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58743] Another function of GAM8145 is therefore inhibition of LOC283167 (Accession XP_210921.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283167.

[58744] LOC283331 (Accession XP_210977.1) is another

GAM8145 target gene, herein designated TARGET GENE. LOC283331 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC283331, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283331 BINDING SITE, designated SEQ ID:9046, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58745] Another function of GAM8145 is therefore inhibition of LOC283331 (Accession XP_210977.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283331.

[58746] LOC283514 (Accession XP_210264.2) is another GAM8145 target gene, herein designated TARGET GENE. LOC283514 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283514 BINDING SITE, design-

nated SEQ ID:13165, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58747] Another function of GAM8145 is therefore inhibition of LOC283514 (Accession XP_210264.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283514.

[58748] LOC283893 (Accession XP_211247.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC283893 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283893, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283893 BINDING SITE, designated SEQ ID:15479, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58749] Another function of GAM8145 is therefore inhibition of LOC283893 (Accession XP_211247.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283893.

[58750] LOC283908 (Accession XP_211252.3) is another GAM8145 target gene, herein designated TARGET GENE. LOC283908 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC283908, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283908 BINDING SITE, designated SEQ ID:15479, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58751] Another function of GAM8145 is therefore inhibition of LOC283908 (Accession XP_211252.3) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283908.

[58752] LOC284320 (Accession XP_209156.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC284320 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284320 BINDING SITE, designated SEQ ID:1483, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58753] Another function of GAM8145 is therefore inhibition of LOC284320 (Accession XP_209156.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284320.

[58754] LOC284445 (Accession XP_209212.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC284445 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC284445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284445 BINDING SITE, designated SEQ ID:7639, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58755] Another function of GAM8145 is therefore inhibition of LOC284445 (Accession XP_209212.1) . Accordingly, utili-

ties of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284445.

[58756] LOC284475 (Accession XP_211478.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC284475 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC284475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284475 BINDING SITE, designated SEQ ID:10899, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58757] Another function of GAM8145 is therefore inhibition of LOC284475 (Accession XP_211478.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284475.

[58758] LOC284682 (Accession XP_211586.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC284682 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by

LOC284682, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284682 BINDING SITE, designated SEQ ID:13805, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58759] Another function of GAM8145 is therefore inhibition of LOC284682 (Accession XP_211586.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284682.

[58760] LOC285099 (Accession XP_209474.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC285099 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285099, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285099 BINDING SITE, designated SEQ ID:16224, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58761] Another function of GAM8145 is therefore inhibition of LOC285099 (Accession XP_209474.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285099.

[58762] LOC285103 (Accession XP_211766.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC285103 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285103 BINDING SITE, designated SEQ ID:8036, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58763] Another function of GAM8145 is therefore inhibition of LOC285103 (Accession XP_211766.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285103.

[58764] LOC285485 (Accession XP_211913.1) is another GAM8145 target gene, herein designated TARGET GENE.

LOC285485 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285485, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285485 BINDING SITE, designated SEQ ID:19642, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58765] Another function of GAM8145 is therefore inhibition of LOC285485 (Accession XP_211913.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285485.

[58766] LOC285662 (Accession XP_209713.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC285662 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285662, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285662 BINDING SITE, designated SEQ ID:5278, to the nucleotide sequence of

GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58767] Another function of GAM8145 is therefore inhibition of LOC285662 (Accession XP_209713.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285662.

[58768] LOC285692 (Accession XP_211984.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC285692 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285692, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285692 BINDING SITE, designated SEQ ID:12958, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58769] Another function of GAM8145 is therefore inhibition of LOC285692 (Accession XP_211984.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285692.

[58770] LOC285889 (Accession XP_212070.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC285889 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285889, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285889 BINDING SITE, designated SEQ ID:6980, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58771] Another function of GAM8145 is therefore inhibition of LOC285889 (Accession XP_212070.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285889.

[58772] LOC285978 (Accession XP_212131.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC285978 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285978, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC285978 BINDING SITE, designated SEQ ID:18029, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58773] Another function of GAM8145 is therefore inhibition of LOC285978 (Accession XP_212131.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285978.

[58774] LOC285981 (Accession XP_212114.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC285981 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC285981, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285981 BINDING SITE, designated SEQ ID:18029, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58775] Another function of GAM8145 is therefore inhibition of LOC285981 (Accession XP_212114.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285981.

[58776] LOC286022 (Accession XP_212130.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC286022 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286022, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286022 BINDING SITE, designated SEQ ID:3075, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58777] Another function of GAM8145 is therefore inhibition of LOC286022 (Accession XP_212130.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286022.

[58778] LOC286112 (Accession XP_212176.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC286112 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286112, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286112 BINDING SITE, designated SEQ ID:12097, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58779] Another function of GAM8145 is therefore inhibition of LOC286112 (Accession XP_212176.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286112.

[58780] LOC286399 (Accession NP_789789.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC286399 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC286399, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286399 BINDING SITE, designated SEQ ID:19146, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58781] Another function of GAM8145 is therefore inhibition of

LOC286399 (Accession NP_789789.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286399.

[58782] LOC286430 (Accession XP_210044.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC286430 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC286430, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286430 BINDING SITE, designated SEQ ID:19962, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58783] Another function of GAM8145 is therefore inhibition of LOC286430 (Accession XP_210044.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286430.

[58784] LOC340133 (Accession XP_291151.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC340133 BINDING SITE is a target binding site found in

the 3' untranslated region of mRNA encoded by LOC340133, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340133 BINDING SITE, designated SEQ ID:17436, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58785] Another function of GAM8145 is therefore inhibition of LOC340133 (Accession XP_291151.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340133.

[58786] LOC340276 (Accession XP_295197.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC340276 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC340276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340276 BINDING SITE, designated SEQ ID:17407, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also design-

nated SEQ ID:328.

[58787] Another function of GAM8145 is therefore inhibition of LOC340276 (Accession XP_295197.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340276.

[58788] LOC340528 (Accession XP_295268.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC340528 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC340528, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340528 BINDING SITE, designated SEQ ID:4381, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58789] Another function of GAM8145 is therefore inhibition of LOC340528 (Accession XP_295268.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340528.

[58790] LOC347941 (Accession XP_301398.1) is another

GAM8145 target gene, herein designated TARGET GENE. LOC347941 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC347941, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347941 BINDING SITE, designated SEQ ID:16665, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58791] Another function of GAM8145 is therefore inhibition of LOC347941 (Accession XP_301398.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347941.

[58792] LOC348378 (Accession XP_300723.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC348378 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC348378, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348378 BINDING SITE, design-

nated SEQ ID:5706, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58793] Another function of GAM8145 is therefore inhibition of LOC348378 (Accession XP_300723.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348378.

[58794] LOC349339 (Accession XP_301042.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC349339 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC349339, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349339 BINDING SITE, designated SEQ ID:7639, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58795] Another function of GAM8145 is therefore inhibition of LOC349339 (Accession XP_301042.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC349339.

[58796] LOC351743 (Accession XP_305099.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC351743 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC351743, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC351743 BINDING SITE, designated SEQ ID:20137, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58797] Another function of GAM8145 is therefore inhibition of LOC351743 (Accession XP_305099.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC351743.

[58798] LOC352287 (Accession XP_305558.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC352287 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC352287, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC352287 BINDING SITE, designated SEQ ID:1767, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58799] Another function of GAM8145 is therefore inhibition of LOC352287 (Accession XP_305558.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC352287.

[58800] LOC51279 (Accession NP_057630.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC51279 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC51279, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51279 BINDING SITE, designated SEQ ID:16462, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58801] Another function of GAM8145 is therefore inhibition of LOC51279 (Accession NP_057630.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC51279.

[58802] LOC89944 (Accession NP_612351.2) is another GAM8145 target gene, herein designated TARGET GENE. LOC89944 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC89944, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC89944 BINDING SITE, designated SEQ ID:19307, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58803] Another function of GAM8145 is therefore inhibition of LOC89944 (Accession NP_612351.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC89944.

[58804] LOC90826 (Accession NP_612373.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC90826 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by LOC90826, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC90826 BINDING SITE, designated SEQ ID:3263, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58805] Another function of GAM8145 is therefore inhibition of LOC90826 (Accession NP_612373.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90826.

[58806] LOC91464 (Accession XP_038589.1) is another GAM8145 target gene, herein designated TARGET GENE. LOC91464 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC91464, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91464 BINDING SITE, designated SEQ ID:6655, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58807] Another function of GAM8145 is therefore inhibition of LOC91464 (Accession XP_038589.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC91464.

[58808] LOC95803 (Accession XP_047816.5) is another GAM8145 target gene, herein designated TARGET GENE. LOC95803 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by LOC95803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC95803 BINDING SITE, designated SEQ ID:9601, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58809] Another function of GAM8145 is therefore inhibition of LOC95803 (Accession XP_047816.5) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC95803.

[58810] Mannosidase, alpha, class 1a, member 1 (MAN1A1, Accession NP_005898.2) is another GAM8145 target gene, herein designated TARGET GENE. MAN1A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MAN1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of MAN1A1 BINDING SITE, designated SEQ ID:14751, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58811] Another function of GAM8145 is therefore inhibition of Mannosidase, alpha, class 1a, member 1 (MAN1A1, Accession NP_005898.2), a gene which removes 3 distinct mannose residues from peptide-bound Man(9)-GlcNAc(2) oligosaccharides. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAN1A1.

[58812] The function of MAN1A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM129.1. Mannosidase, alpha, class 2a, member 1 (MAN2A1, Accession NP_002363.1) is another GAM8145 target gene, herein designated TARGET GENE. MAN2A1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MAN2A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAN2A1 BINDING SITE, designated SEQ ID:9444, to the

nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58813] Another function of GAM8145 is therefore inhibition of Mannosidase, alpha, class 2a, member 1 (MAN2A1, Accession NP_002363.1), a gene which catalyzes the final hydrolytic step in the asparagine- linked oligosaccharide (N- glycan) maturation pathway and therefore may be associated with Lupus erythematosus. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Lupus erythematosus, and of other diseases and clinical conditions associated with MAN2A1.

[58814] The function of MAN2A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2565.2.MBNL2 (Accession NP_659002.1) is another GAM8145 target gene, herein designated TARGET GENE. MBNL2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by MBNL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MBNL2 BINDING SITE, designated SEQ ID:1692, to the nucleotide sequence of GAM8145

RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58815] Another function of GAM8145 is therefore inhibition of MBNL2 (Accession NP_659002.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MBNL2.

[58816] Mesenchyme homeo box 2 (growth arrest-specific homeo box) (MEOX2, Accession NP_005915.1) is another GAM8145 target gene, herein designated TARGET GENE. MEOX2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MEOX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEOX2 BINDING SITE, designated SEQ ID:10706, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58817] Another function of GAM8145 is therefore inhibition of Mesenchyme homeo box 2 (growth arrest-specific homeo box) (MEOX2, Accession NP_005915.1), a gene which roles in mesoderm induction and, somitogenesis, and myogenic and sclerotomal differentiation. Accordingly, utilities of GAM8145 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with MEOX2.

[58818] The function of MEOX2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM538.1.MGC11102 (Accession NP_115701.2) is another GAM8145 target gene, herein designated TARGET GENE. MGC11102 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC11102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC11102 BINDING SITE, designated SEQ ID:11974, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58819] Another function of GAM8145 is therefore inhibition of MGC11102 (Accession NP_115701.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11102.

[58820] MGC20781 (Accession NP_443167.1) is another GAM8145 target gene, herein designated TARGET GENE. MGC20781

BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by MGC20781, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC20781 BINDING SITE, designated SEQ ID:1066, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58821] Another function of GAM8145 is therefore inhibition of MGC20781 (Accession NP_443167.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC20781.

[58822] MGC27434 (Accession NP_659487.1) is another GAM8145 target gene, herein designated TARGET GENE. MGC27434 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by MGC27434, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC27434 BINDING SITE, designated SEQ ID:7480, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58823] Another function of GAM8145 is therefore inhibition of MGC27434 (Accession NP_659487.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC27434.

[58824] Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1) is another GAM8145 target gene, herein designated TARGET GENE. NCOA6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCOA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6 BINDING SITE, designated SEQ ID:11974, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58825] Another function of GAM8145 is therefore inhibition of Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1), a gene which activates gene transcription through ligand- dependent association with coactivators. and therefore may be associated with Breast cancer. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Breast cancer., and of other diseases

and clinical conditions associated with NCOA6.

[58826] The function of NCOA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1. Oculocerebrorenal syndrome of Lowe (OCRL, Accession NP_001578.2) is another GAM8145 target gene, herein designated TARGET GENE. OCRL BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OCRL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OCRL BINDING SITE, designated SEQ ID:11613, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58827] Another function of GAM8145 is therefore inhibition of Oculocerebrorenal syndrome of Lowe (OCRL, Accession NP_001578.2). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OCRL.

[58828] Oculocerebrorenal syndrome of Lowe (OCRL, Accession NP_000267.2) is another GAM8145 target gene, herein designated TARGET GENE. OCRL BINDING SITE is a target

binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by OCRL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OCRL BINDING SITE, designated SEQ ID:11613, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58829] Another function of GAM8145 is therefore inhibition of Oculocerebrorenal syndrome of Lowe (OCRL, Accession NP_000267.2). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OCRL.

[58830] Protocadherin alpha 11 (PCDHA11, Accession NP_061725.1) is another GAM8145 target gene, herein designated TARGET GENE. PCDHA11 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by PCDHA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA11 BINDING SITE, designated SEQ ID:10904, to the nucleotide sequence of GAM8145 RNA, herein design-

nated GAM RNA, also designated SEQ ID:328.

[58831] Another function of GAM8145 is therefore inhibition of Protocadherin alpha 11 (PCDHA11, Accession NP_061725.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA11.

[58832] Protocadherin alpha 11 (PCDHA11, Accession NP_114067.1) is another GAM8145 target gene, herein designated TARGET GENE. PCDHA11 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by PCDHA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA11 BINDING SITE, designated SEQ ID:10904, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58833] Another function of GAM8145 is therefore inhibition of Protocadherin alpha 11 (PCDHA11, Accession NP_114067.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA11.

[58834] PEF (Accession NP_036524.1) is another GAM8145 target

gene, herein designated TARGET GENE. PEF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PEF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PEF BINDING SITE, designated SEQ ID:5634, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58835] Another function of GAM8145 is therefore inhibition of PEF (Accession NP_036524.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEF.

[58836] PKD1-like (Accession NP_079150.2) is another GAM8145 target gene, herein designated TARGET GENE. PKD1-like BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PKD1-like, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKD1-like BINDING SITE, designated SEQ ID:2164, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58837] Another function of GAM8145 is therefore inhibition of PKD1-like (Accession NP_079150.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKD1-like.

[58838] Phospholipid scramblase 3 (PLSCR3, Accession NP_065093.2) is another GAM8145 target gene, herein designated TARGET GENE. PLSCR3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PLSCR3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLSCR3 BINDING SITE, designated SEQ ID:11017, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58839] Another function of GAM8145 is therefore inhibition of Phospholipid scramblase 3 (PLSCR3, Accession NP_065093.2) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLSCR3.

[58840] Promyelocytic leukemia (PML, Accession NP_150241.1) is another GAM8145 target gene, herein designated TARGET

GENE. PML BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PML, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PML BINDING SITE, designated SEQ ID:18322, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58841] Another function of GAM8145 is therefore inhibition of Promyelocytic leukemia (PML, Accession NP_150241.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PML.

[58842] PNPLA1 (Accession NP_775947.1) is another GAM8145 target gene, herein designated TARGET GENE. PNPLA1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by PNPLA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNPLA1 BINDING SITE, designated SEQ ID:17384, to the nucleotide sequence of GAM8145 RNA, herein designated

GAM RNA, also designated SEQ ID:328.

[58843] Another function of GAM8145 is therefore inhibition of PNPLA1 (Accession NP_775947.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNPLA1.

[58844] Pou domain, class 3, transcription factor 2 (POU3F2, Accession NP_005595.1) is another GAM8145 target gene, herein designated TARGET GENE. POU3F2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by POU3F2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU3F2 BINDING SITE, designated SEQ ID:19075, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58845] Another function of GAM8145 is therefore inhibition of Pou domain, class 3, transcription factor 2 (POU3F2, Accession NP_005595.1), a gene which positively regulates the genes under the control of corticotropin- releasing hormone. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POU3F2.

[58846] The function of POU3F2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1. Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690911.1) is another GAM8145 target gene, herein designated TARGET GENE. PPEF2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by PPEF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPEF2 BINDING SITE, designated SEQ ID:9035, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58847] Another function of GAM8145 is therefore inhibition of Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690911.1), a gene which is a homolog of *Drosophila* rdgC. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPEF2.

[58848] The function of PPEF2 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM66.2. Protein kinase, camp-dependent, regulatory, type ii, beta (PRKAR2B, Accession NP_002727.1) is another GAM8145 target gene, herein designated TARGET GENE. PRKAR2B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PRKAR2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKAR2B BINDING SITE, designated SEQ ID:6242, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58849] Another function of GAM8145 is therefore inhibition of Protein kinase, camp-dependent, regulatory, type ii, beta (PRKAR2B, Accession NP_002727.1), a gene which type ii regulatory chains mediate membrane association by binding to anchoring proteins, including the map2 kinase. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKAR2B.

[58850] The function of PRKAR2B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM357.2. Protein tyrosine phosphatase, non-receptor type 9 (PTPN9, Accession NP_002824.1) is another GAM8145 target gene, herein designated TARGET GENE. PTPN9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by PTPN9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPN9 BINDING SITE, designated SEQ ID:6603, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58851] Another function of GAM8145 is therefore inhibition of Protein tyrosine phosphatase, non-receptor type 9 (PTPN9, Accession NP_002824.1). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPN9.

[58852] Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) is another GAM8145 target gene, herein designated TARGET GENE. PTPRT BINDING SITE1 and PTPRT BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PTPRT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRT BINDING SITE1 and PTPRT BINDING SITE2, designated SEQ ID:6604 and SEQ ID:6604 respectively, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58853] Another function of GAM8145 is therefore inhibition of Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRT.

[58854] Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) is another GAM8145 target gene, herein designated TARGET GENE. PTPRT BINDING SITE1 and PTPRT BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PTPRT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRT BINDING SITE1 and PTPRT BINDING SITE2, designated SEQ ID:19034 and SEQ ID:19034 respectively, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also design-

nated SEQ ID:328.

[58855] Another function of GAM8145 is therefore inhibition of Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRT.

[58856] Rho-related btb domain containing 3 (RHOBTB3, Accession NP_055714.1) is another GAM8145 target gene, herein designated TARGET GENE. RHOBTB3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by RHOBTB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHOBTB3 BINDING SITE, designated SEQ ID:10064, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58857] Another function of GAM8145 is therefore inhibition of Rho-related btb domain containing 3 (RHOBTB3, Accession NP_055714.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHOBTB3.

[58858] Ring finger protein 14 (RNF14, Accession NP_004281.1) is

another GAM8145 target gene, herein designated TARGET GENE. RNF14 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by RNF14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF14 BINDING SITE, designated SEQ ID:11351, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58859] Another function of GAM8145 is therefore inhibition of Ring finger protein 14 (RNF14, Accession NP_004281.1), a gene which associates with the androgen receptor (AR); functions as a transcriptional coactivator. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF14.

[58860] The function of RNF14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.2.Sodium channel, nonvoltage-gated 1, gamma (SCNN1G, Accession NP_001030.1) is another GAM8145 target gene, herein designated TARGET GENE. SCNN1G BINDING SITE is a target binding site found in the

3' untranslated region of mRNA encoded by SCNN1G, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCNN1G BINDING SITE, designated SEQ ID:1599, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58861] Another function of GAM8145 is therefore inhibition of Sodium channel, nonvoltage-gated 1, gamma (SCNN1G, Accession NP_001030.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCNN1G.

[58862] Sh3-domain grb2-like 2 (SH3GL2, Accession NP_003017.1) is another GAM8145 target gene, herein designated TARGET GENE. SH3GL2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by SH3GL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3GL2 BINDING SITE, designated SEQ ID:10145, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58863] Another function of GAM8145 is therefore inhibition of Sh3-domain grb2-like 2 (SH3GL2, Accession NP_003017.1), a gene which plays a role in synaptic vesicle recycling, in particular in clathrin-mediated vesicle endocytosis. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3GL2.

[58864] The function of SH3GL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM513.1.TACTILE (Accession NP_005807.1) is another GAM8145 target gene, herein designated TARGET GENE. TACTILE BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TACTILE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TACTILE BINDING SITE, designated SEQ ID:16831, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58865] Another function of GAM8145 is therefore inhibition of TACTILE (Accession NP_005807.1). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with TAC-TILE.

[58866] Taf6 rna polymerase ii, tata box binding protein (tbp)-associated factor, 80kda (TAF6, Accession NP_620835.1) is another GAM8145 target gene, herein designated TARGET GENE. TAF6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TAF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAF6 BINDING SITE, designated SEQ ID:1733, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58867] Another function of GAM8145 is therefore inhibition of Taf6 rna polymerase ii, tata box binding protein (tbp)-associated factor, 80kda (TAF6, Accession NP_620835.1), a gene which plays a central role in mediating promoter responses to various activators and repressors. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAF6.

[58868] The function of TAF6 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM507.1. Taf6 rna polymerase ii, tata box binding protein (tbp)-associated factor, 80kda (TAF6, Accession NP_005632.1) is another GAM8145 target gene, herein designated TARGET GENE. TAF6 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by TAF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAF6 BINDING SITE, designated SEQ ID:1733, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58869] Another function of GAM8145 is therefore inhibition of Taf6 rna polymerase ii, tata box binding protein (tbp)-associated factor, 80kda (TAF6, Accession NP_005632.1), a gene which plays a central role in mediating promoter responses to various activators and repressors. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAF6.

[58870] The function of TAF6 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM507.1. Transducin (beta)-like 1x-linked (TBL1X, Accession NP_005638.1) is another GAM8145 target gene, herein designated TARGET GENE. TBL1X BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TBL1X, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBL1X BINDING SITE, designated SEQ ID:2978, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58871] Another function of GAM8145 is therefore inhibition of Transducin (beta)-like 1x-linked (TBL1X, Accession NP_005638.1), a gene which activates latent HDAC3 activity. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBL1X.

[58872] The function of TBL1X and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM28.1. T-cell leukemia/lymphoma 1b (TCL1B, Ac-

cession NP_004909.1) is another GAM8145 target gene, herein designated TARGET GENE. TCL1B BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TCL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL1B BINDING SITE, designated SEQ ID:4847, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58873] Another function of GAM8145 is therefore inhibition of T-cell leukemia/lymphoma 1b (TCL1B, Accession NP_004909.1), a gene which is a member of the TCL1 family that is activated in chronic t- cell leukemias (t- cll) and therefore may be associated with Chronic t- cell leukemias. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Chronic t- cell leukemias, and of other diseases and clinical conditions associated with TCL1B.

[58874] The function of TCL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1. Transketolase-like 1 (TKTL1, Accession

NP_036385.1) is another GAM8145 target gene, herein designated TARGET GENE. TKTL1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by TKTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TKTL1 BINDING SITE, designated SEQ ID:10570, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58875] Another function of GAM8145 is therefore inhibition of Transketolase-like 1 (TKTL1, Accession NP_036385.1), a gene which involves in pentose phosphate pathway and therefore may be associated with Wernicke- korsakoff syndrome. Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of Wernicke- korsakoff syndrome, and of other diseases and clinical conditions associated with TKTL1.

[58876] The function of TKTL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM608.2. Testis-specific transcript, y-linked 9 (TTY9, Accession NP_114133.1) is another GAM8145

target gene, herein designated TARGET GENE. TTTY9 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by TTTY9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTTY9 BINDING SITE, designated SEQ ID:17970, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58877] Another function of GAM8145 is therefore inhibition of Testis-specific transcript, y-linked 9 (TTY9, Accession NP_114133.1). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTTY9.

[58878] Udp-glucuronate decarboxylase 1 (UXS1, Accession NP_079352.1) is another GAM8145 target gene, herein designated TARGET GENE. UXS1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by UXS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UXS1 BINDING SITE, designated SEQ ID:9295, to the nucleotide sequence of GAM8145

RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58879] Another function of GAM8145 is therefore inhibition of Udp-glucuronate decarboxylase 1 (UXS1, Accession NP_079352.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UXS1.

[58880] Vacuolar protein sorting 4a (yeast) (VPS4A, Accession NP_037377.1) is another GAM8145 target gene, herein designated TARGET GENE. VPS4A BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by VPS4A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VPS4A BINDING SITE, designated SEQ ID:12450, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58881] Another function of GAM8145 is therefore inhibition of Vacuolar protein sorting 4a (yeast) (VPS4A, Accession NP_037377.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS4A.

[58882] Reserved (WDR17, Accession NP_851782.1) is another GAM8145 target gene, herein designated TARGET GENE. WDR17 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by WDR17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR17 BINDING SITE, designated SEQ ID:15836, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58883] Another function of GAM8145 is therefore inhibition of Reserved (WDR17, Accession NP_851782.1) . Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR17.

[58884] Zinc finger protein 187 (ZNF187, Accession NP_689949.1) is another GAM8145 target gene, herein designated TARGET GENE. ZNF187 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ZNF187, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of ZNF187 BINDING SITE, designated SEQ ID:1570, to the nucleotide sequence of GAM8145 RNA, herein designated GAM RNA, also designated SEQ ID:328.

[58885] Another function of GAM8145 is therefore inhibition of Zinc finger protein 187 (ZNF187, Accession NP_689949.1). Accordingly, utilities of GAM8145 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF187.

[58886]

[58887] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 8297 (GAM8297), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[58888] GAM8297 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM8297 was detected is described hereinabove with reference to Figs. 8–15.

[58889] GAM8297 gene, herein designated GAM GENE, and GAM8297 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[58890] GAM8297 gene encodes a GAM8297 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM8297 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM8297 precursor RNA is designated SEQ ID:154, and is provided hereinbelow with reference to the sequence listing part.

[58891] GAM8297 precursor RNA folds onto itself, forming GAM8297 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[58892] GAM8297 precursor RNA folds onto itself, forming GAM8297 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence

of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[58893] Nucleotide sequence of GAM8297 precursor RNA, designated SEQ-ID: 154, and a schematic representation of a predicted secondary folding of GAM8297 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[58894] An enzyme complex designated DICER COMPLEX, `dices` the GAM8297 folded precursor RNA into GAM8297 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: B) nucleotide sequence of GAM8297 RNA is designated SEQ ID:367, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[58895] GAM8297 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM8297 target RNA, herein designated GAM TARGET RNA. GAM8297

target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5' untranslated region, a protein coding region and a 3' untranslated region, designated 5'UTR, PROTEIN CODING and 3'UTR respectively.

[58896] GAM8297 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM8297 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM8297 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting. GAM8297 RNA may have a different number of target binding sites in untranslated regions of a GAM8297 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3'UTR region, this is meant as an example only. These target binding sites may be located in the 3'UTR region, the 5'UTR region, or in both 3'UTR and 5'UTR regions.

[58897] The complementary binding of GAM8297 RNA, herein designated GAM RNA, to target binding sites on GAM8297 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM8297 target RNA into GAM8297 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[58898] It is appreciated that GAM8297 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM8297 target genes. The mRNA of each one of this plurality of GAM8297 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM8297 RNA, herein designated GAM RNA, and which when bound by GAM8297 RNA causes inhibition of translation of respective one or more GAM8297 target proteins.

[58899] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM8297 gene, herein designated GAM GENE, on one or more GAM8297 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the

background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[58900] It is appreciated that specific functions and accordingly utilities of GAM8297 correlate with, and may be deduced from, the identity of the target genes which GAM8297 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[58901]

[58902]

[58903] Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_005683.2) is a GAM8297 target gene, herein designated TARGET GENE. ABCF2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by ABCF2, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCF2 BINDING SITE, designated SEQ ID:2015, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58904] A function of GAM8297 is therefore inhibition of Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_005683.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCF2.

[58905] Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_009120.1) is another GAM8297 target gene, herein designated TARGET GENE. ABCF2 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by ABCF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCF2 BINDING SITE, designated SEQ ID:2015, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58906] Another function of GAM8297 is therefore inhibition of

Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_009120.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCF2.

[58907] A disintegrin and metalloproteinase domain 2 (fertilin beta) (ADAM2, Accession NP_001455.2) is another GAM8297 target gene, herein designated TARGET GENE. ADAM2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ADAM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAM2 BINDING SITE, designated SEQ ID:6042, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58908] Another function of GAM8297 is therefore inhibition of A disintegrin and metalloproteinase domain 2 (fertilin beta) (ADAM2, Accession NP_001455.2), a gene which sperm surface membrane protein that may be involved in sperm-egg plasma membrane adhesion and fusion during fertilization. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAM2.

[58909] The function of ADAM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3026.1. Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1) is another GAM8297 target gene, herein designated TARGET GENE. ADCY1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by ADCY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY1 BINDING SITE, designated SEQ ID:13856, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58910] Another function of GAM8297 is therefore inhibition of Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1), a gene which is a calmodulin-sensitive adenylyl cyclase. It may play a role in memory acquisition and learning. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY1.

[58911] The function of ADCY1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM144.1. Adenosine a3 receptor (ADORA3, Accession NP_000668.1) is another GAM8297 target gene, herein designated TARGET GENE. ADORA3 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ADORA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADORA3 BINDING SITE, designated SEQ ID:2855, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58912] Another function of GAM8297 is therefore inhibition of Adenosine a3 receptor (ADORA3, Accession NP_000668.1), a gene which the activity of this receptor is mediated by G proteins which inhibits adenylyl cyclase. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADORA3.

[58913] The function of ADORA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1. ALK7 (Accession NP_660302.1) is another

GAM8297 target gene, herein designated TARGET GENE. ALK7 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ALK7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALK7 BINDING SITE, designated SEQ ID:7726, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58914] Another function of GAM8297 is therefore inhibition of ALK7 (Accession NP_660302.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALK7.

[58915] Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) is another GAM8297 target gene, herein designated TARGET GENE. ARHF BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ARHF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHF BINDING SITE, designated SEQ ID:11640, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also design-

nated SEQ ID:367.

[58916] Another function of GAM8297 is therefore inhibition of Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHF.

[58917] Rho guanine nucleotide exchange factor (gef) 10 (ARHGEF10, Accession NP_055444.1) is another GAM8297 target gene, herein designated TARGET GENE. ARHGEF10 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by ARHGEF10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF10 BINDING SITE, designated SEQ ID:19384, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58918] Another function of GAM8297 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 10 (ARHGEF10, Accession NP_055444.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF10.

[58919] Ankyrin repeat and socs box-containing 17 (ASB17, Accession NP_543144.1) is another GAM8297 target gene, herein designated TARGET GENE. ASB17 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by ASB17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB17 BINDING SITE, designated SEQ ID:491, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58920] Another function of GAM8297 is therefore inhibition of Ankyrin repeat and socs box-containing 17 (ASB17, Accession NP_543144.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB17.

[58921] Beta-1,3-glucuronyltransferase 1 (glucuronosyltransferase p) (B3GAT1, Accession NP_473366.1) is another GAM8297 target gene, herein designated TARGET GENE. B3GAT1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by B3GAT1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B3GAT1 BINDING SITE, designated SEQ ID:1556, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58922] Another function of GAM8297 is therefore inhibition of Beta-1,3-glucuronyltransferase 1 (glucuronosyltransferase p) (B3GAT1, Accession NP_473366.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GAT1.

[58923] Beta-1,3-glucuronyltransferase 1 (glucuronosyltransferase p) (B3GAT1, Accession NP_061114.1) is another GAM8297 target gene, herein designated TARGET GENE. B3GAT1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by B3GAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B3GAT1 BINDING SITE, designated SEQ ID:1556, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58924] Another function of GAM8297 is therefore inhibition of Beta-1,3-glucuronyltransferase 1 (glucuronosyltransferase p) (B3GAT1, Accession NP_061114.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GAT1.

[58925] Biglycan (BGN, Accession NP_001702.1) is another GAM8297 target gene, herein designated TARGET GENE. BGN BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by BGN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BGN BINDING SITE, designated SEQ ID:14465, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58926] Another function of GAM8297 is therefore inhibition of Biglycan (BGN, Accession NP_001702.1), a gene which is involved in collagen fiber assembly. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BGN.

[58927] The function of BGN and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM282.2. Burkitt lymphoma receptor 1, gtp binding protein (chemokine (c-x-c motif) receptor 5) (BLR1, Accession NP_001707.1) is another GAM8297 target gene, herein designated TARGET GENE. BLR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by BLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BLR1 BINDING SITE, designated SEQ ID:18216, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58928] Another function of GAM8297 is therefore inhibition of Burkitt lymphoma receptor 1, gtp binding protein (chemokine (c-x-c motif) receptor 5) (BLR1, Accession NP_001707.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLR1.

[58929] Burkitt lymphoma receptor 1, gtp binding protein (chemokine (c-x-c motif) receptor 5) (BLR1, Accession NP_116743.1) is another GAM8297 target gene, herein designated TARGET GENE. BLR1 BINDING SITE is a target

binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by BLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BLR1 BINDING SITE, designated SEQ ID:18216, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58930] Another function of GAM8297 is therefore inhibition of Burkitt lymphoma receptor 1, gtp binding protein (chemokine (c-x-c motif) receptor 5) (BLR1, Accession NP_116743.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLR1.

[58931] Chromosome 1 open reading frame 2 (C1orf2, Accession NP_006580.1) is another GAM8297 target gene, herein designated TARGET GENE. C1orf2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C1orf2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf2 BINDING SITE, designated SEQ ID:11170, to the nucleotide sequence of GAM8297

RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58932] Another function of GAM8297 is therefore inhibition of Chromosome 1 open reading frame 2 (C1orf2, Accession NP_006580.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf2.

[58933] Chromosome 21 open reading frame 108 (C21orf108, Accession XP_114191.2) is another GAM8297 target gene, herein designated TARGET GENE. C21orf108 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C21orf108, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf108 BINDING SITE, designated SEQ ID:3476, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58934] Another function of GAM8297 is therefore inhibition of Chromosome 21 open reading frame 108 (C21orf108, Accession XP_114191.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf108.

[58935] Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) is another GAM8297 target gene, herein designated TARGET GENE. C6orf33 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf33 BINDING SITE, designated SEQ ID:10725, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58936] Another function of GAM8297 is therefore inhibition of Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf33.

[58937] C6orf50 (Accession XP_166460.1) is another GAM8297 target gene, herein designated TARGET GENE. C6orf50 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by C6orf50, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

C6orf50 BINDING SITE, designated SEQ ID:16763, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58938] Another function of GAM8297 is therefore inhibition of C6orf50 (Accession XP_166460.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf50.

[58939] Chromosome 9 open reading frame 14 (C9orf14, Accession XP_098859.2) is another GAM8297 target gene, herein designated TARGET GENE. C9orf14 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by C9orf14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf14 BINDING SITE, designated SEQ ID:17546, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58940] Another function of GAM8297 is therefore inhibition of Chromosome 9 open reading frame 14 (C9orf14, Accession XP_098859.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with C9orf14.

[58941] Calcium channel, voltage-dependent, I type, alpha 1d subunit (CACNA1D, Accession NP_000711.1) is another GAM8297 target gene, herein designated TARGET GENE. CACNA1D BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CACNA1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNA1D BINDING SITE, designated SEQ ID:7620, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58942] Another function of GAM8297 is therefore inhibition of Calcium channel, voltage-dependent, I type, alpha 1d subunit (CACNA1D, Accession NP_000711.1), a gene which mediates the entry of calcium ions into excitable cells and therefore may be associated with Self-biting and other self-injurious behaviors. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Self-biting and other self-injurious behaviors, and of other diseases and clinical conditions associated with CACNA1D.

[58943] The function of CACNA1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1095.1. Calcium channel, voltage-dependent, alpha 1h subunit (CACNA1H, Accession NP_066921.1) is another GAM8297 target gene, herein designated TARGET GENE. CACNA1H BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CACNA1H, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNA1H BINDING SITE, designated SEQ ID:14959, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58944] Another function of GAM8297 is therefore inhibition of Calcium channel, voltage-dependent, alpha 1h subunit (CACNA1H, Accession NP_066921.1). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNA1H.

[58945] Calcium channel, voltage-dependent, beta 1 subunit (CACNB1, Accession NP_000714.2) is another GAM8297

target gene, herein designated TARGET GENE. CACNB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CACNB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNB1 BINDING SITE, designated SEQ ID:17887, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58946] Another function of GAM8297 is therefore inhibition of Calcium channel, voltage-dependent, beta 1 subunit (CACNB1, Accession NP_000714.2), a gene which may not only play an important role in the transport/insertion of the alpha-1S subunit into the membrane. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNB1.

[58947] The function of CACNB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2. Chemokine (c-c motif) ligand 14 (CCL14, Accession NP_116738.1) is another GAM8297 target gene, herein designated TARGET GENE. CCL14 BINDING SITE is a

target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CCL14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL14 BINDING SITE, designated SEQ ID:12494, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58948] Another function of GAM8297 is therefore inhibition of Chemokine (c-c motif) ligand 14 (CCL14, Accession NP_116738.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL14.

[58949] Chemokine (c-c motif) ligand 14 (CCL14, Accession NP_004157.1) is another GAM8297 target gene, herein designated TARGET GENE. CCL14 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CCL14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL14 BINDING SITE, designated SEQ ID:12494, to the nucleotide sequence of GAM8297 RNA, herein designated

GAM RNA, also designated SEQ ID:367.

[58950] Another function of GAM8297 is therefore inhibition of Chemokine (c-c motif) ligand 14 (CCL14, Accession NP_004157.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL14.

[58951] Chemokine (c-c motif) ligand 14 (CCL14, Accession NP_116739.1) is another GAM8297 target gene, herein designated TARGET GENE. CCL14 BINDING SITE is a target binding site found in the 5' untranslated region of multiple transcripts of mRNA encoded by CCL14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL14 BINDING SITE, designated SEQ ID:12494, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58952] Another function of GAM8297 is therefore inhibition of Chemokine (c-c motif) ligand 14 (CCL14, Accession NP_116739.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL14.

[58953] Chemokine (c-c motif) ligand 15 (CCL15, Accession

NP_116740.1) is another GAM8297 target gene, herein designated TARGET GENE. CCL15 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCL15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL15 BINDING SITE, designated SEQ ID:12494, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58954] Another function of GAM8297 is therefore inhibition of Chemokine (c-c motif) ligand 15 (CCL15, Accession NP_116740.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL15.

[58955] Chemokine (c-c motif) ligand 15 (CCL15, Accession NP_004158.1) is another GAM8297 target gene, herein designated TARGET GENE. CCL15 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CCL15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CCL15 BINDING SITE, designated SEQ ID:12494, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58956] Another function of GAM8297 is therefore inhibition of Chemokine (c-c motif) ligand 15 (CCL15, Accession NP_004158.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL15.

[58957] Cdk5 regulatory subunit associated protein 3 (CDK5RAP3, Accession NP_079473.2) is another GAM8297 target gene, herein designated TARGET GENE. CDK5RAP3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CDK5RAP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDK5RAP3 BINDING SITE, designated SEQ ID:3296, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58958] Another function of GAM8297 is therefore inhibition of Cdk5 regulatory subunit associated protein 3 (CDK5RAP3, Accession NP_079473.2) . Accordingly, utilities of

GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDK5RAP3.

[58959] Cdk5 regulatory subunit associated protein 3 (CDK5RAP3, Accession NP_788275.1) is another GAM8297 target gene, herein designated TARGET GENE. CDK5RAP3 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CDK5RAP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDK5RAP3 BINDING SITE, designated SEQ ID:3296, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58960] Another function of GAM8297 is therefore inhibition of Cdk5 regulatory subunit associated protein 3 (CDK5RAP3, Accession NP_788275.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDK5RAP3.

[58961] Glycoprotein hormones, alpha polypeptide (CGA, Accession NP_000726.1) is another GAM8297 target gene,

herein designated TARGET GENE. CGA BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CGA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGA BINDING SITE, designated SEQ ID:6094, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58962] Another function of GAM8297 is therefore inhibition of Glycoprotein hormones, alpha polypeptide (CGA, Accession NP_000726.1), a gene which is a precursor of the alpha subunit of chorionic gonadotropin hormone. and therefore may be associated with Secondary infertility . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Secondary infertility ., and of other diseases and clinical conditions associated with CGA.

[58963] The function of CGA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.CGI-69 (Accession NP_057100.1) is another GAM8297 target gene, herein designated TARGET GENE.

CGI-69 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CGI-69, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-69 BINDING SITE, designated SEQ ID:15577, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58964] Another function of GAM8297 is therefore inhibition of CGI-69 (Accession NP_057100.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-69.

[58965] Cyclin m2 (CNNM2, Accession NP_060119.2) is another GAM8297 target gene, herein designated TARGET GENE. CNNM2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CNNM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNNM2 BINDING SITE, designated SEQ ID:9355, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58966] Another function of GAM8297 is therefore inhibition of

Cyclin m2 (CNNM2, Accession NP_060119.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNNM2.

[58967] Cannabinoid receptor 1 (brain) (CNR1, Accession NP_057167.1) is another GAM8297 target gene, herein designated TARGET GENE. CNR1 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CNR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNR1 BINDING SITE, designated SEQ ID:8385, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58968] Another function of GAM8297 is therefore inhibition of Cannabinoid receptor 1 (brain) (CNR1, Accession NP_057167.1), a gene which is involved in the cannabinoid-induced CNS effects. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNR1.

[58969] The function of CNR1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM282.2.Collagen, type i, alpha 1 (COL1A1, Accession NP_000079.1) is another GAM8297 target gene, herein designated TARGET GENE. COL1A1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by COL1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL1A1 BINDING SITE, designated SEQ ID:10598, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58970] Another function of GAM8297 is therefore inhibition of Collagen, type i, alpha 1 (COL1A1, Accession NP_000079.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL1A1.

[58971] CPR2 (Accession NP_112162.1) is another GAM8297 target gene, herein designated TARGET GENE. CPR2 BINDING SITE is a target binding site found in the 3' untranslated region of multiple transcripts of mRNA encoded by CPR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of CPR2 BINDING SITE, designated SEQ ID:19074, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58972] Another function of GAM8297 is therefore inhibition of CPR2 (Accession NP_112162.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPR2.

[58973] Corticotropin releasing hormone receptor 1 (CRHR1, Accession NP_004373.2) is another GAM8297 target gene, herein designated TARGET GENE. CRHR1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRHR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRHR1 BINDING SITE, designated SEQ ID:6267, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58974] Another function of GAM8297 is therefore inhibition of Corticotropin releasing hormone receptor 1 (CRHR1, Accession NP_004373.2), a gene which likely mediates physiological and behavioral response to stress. and therefore

may be associated with Adenomas. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Adenomas, and of other diseases and clinical conditions associated with CRHR1.

[58975] The function of CRHR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM852.1. Cartilage linking protein 1 (CRTL1, Accession NP_001875.1) is another GAM8297 target gene, herein designated TARGET GENE. CRTL1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CRTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRTL1 BINDING SITE, designated SEQ ID:1537, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58976] Another function of GAM8297 is therefore inhibition of Cartilage linking protein 1 (CRTL1, Accession NP_001875.1), a gene which stabilize the aggregates of proteoglycan monomers with hyaluronic acid. and therefore may be associated with Several heritable chondrodys-

plasias. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of Several heritable chondrodysplasias, and of other diseases and clinical conditions associated with CRTL1.

[58977] The function of CRTL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.1. Casein kinase 1, gamma 2 (CSNK1G2, Accession NP_001310.2) is another GAM8297 target gene, herein designated TARGET GENE. CSNK1G2 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CSNK1G2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSNK1G2 BINDING SITE, designated SEQ ID:10903, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58978] Another function of GAM8297 is therefore inhibition of Casein kinase 1, gamma 2 (CSNK1G2, Accession NP_001310.2) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSNK1G2.

[58979] Cytochrome c-1 (CYC1, Accession NP_001907.2) is another GAM8297 target gene, herein designated TARGET GENE. CYC1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by CYC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYC1 BINDING SITE, designated SEQ ID:2163, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58980] Another function of GAM8297 is therefore inhibition of Cytochrome c-1 (CYC1, Accession NP_001907.2). Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYC1.

[58981] Cytoplasmic fmr1 interacting protein 2 (CYFIP2, Accession NP_055191.1) is another GAM8297 target gene, herein designated TARGET GENE. CYFIP2 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by CYFIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYFIP2 BINDING SITE, designated

SEQ ID:7131, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58982] Another function of GAM8297 is therefore inhibition of Cytoplasmic fmr1 interacting protein 2 (CYFIP2, Accession NP_055191.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYFIP2.

[58983] Dishevelled associated activator of morphogenesis 1 (DAAM1, Accession NP_055807.1) is another GAM8297 target gene, herein designated TARGET GENE. DAAM1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DAAM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DAAM1 BINDING SITE, designated SEQ ID:13477, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58984] Another function of GAM8297 is therefore inhibition of Dishevelled associated activator of morphogenesis 1 (DAAM1, Accession NP_055807.1), a gene which controls cell polarity and movement during development. Accord-

ingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DAAM1.

[58985] The function of DAAM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.1. Defensin, beta 1 (DEFB1, Accession NP_005209.1) is another GAM8297 target gene, herein designated TARGET GENE. DEFB1 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DEFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DEFB1 BINDING SITE, designated SEQ ID:7595, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58986] Another function of GAM8297 is therefore inhibition of Defensin, beta 1 (DEFB1, Accession NP_005209.1), a gene which has salt- dependent antimicrobial activity and may act in innate immunity. Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEFB1.

[58987] The function of DEFB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM537.2.DEPC-1 (Accession NP_631917.1) is another GAM8297 target gene, herein designated TARGET GENE. DEPC-1 BINDING SITE is a target binding site found in the 5' untranslated region of mRNA encoded by DEPC-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DEPC-1 BINDING SITE, designated SEQ ID:9065, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

[58988] Another function of GAM8297 is therefore inhibition of DEPC-1 (Accession NP_631917.1) . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEPC-1.

[58989] Deiodinase, iodothyronine, type iii (DIO3, Accession NP_001353.2) is another GAM8297 target gene, herein designated TARGET GENE. DIO3 BINDING SITE is a target binding site found in the 3' untranslated region of mRNA encoded by DIO3, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIO3 BINDING SITE, designated SEQ ID:3054, to the nucleotide sequence of GAM8297 RNA, herein designated GAM RNA, also designated SEQ ID:367.

- [58990] Another function of GAM8297 is therefore inhibition of Deiodinase, iodothyronine, type iii (DIO3, Accession NP_001353.2), a gene which regulates circulating fetal thyroid hormone concentrations . Accordingly, utilities of GAM8297 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIO3.
